

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

Vol. 44.

WITH SUPPLEMENT.

LONDON, JANUARY 4, 1912.

PRICE 6D. BY POST, 8D.
ANNUAL SUBSCRIPTION (PREPAID), 7s.

February issue ready on January 31.
Advt. scale is on page 35. The latest time for prepaid Advt. is January 26 (first post).

UNIVERSITY CORRESPONDENCE COLLEGE

For announcements see below and pages 3, 34, and 35.

THE TEACHERS' GUILD OF ST. BRITAIN AND IRELAND.

President: Canon H. WESLEY DENNIS, M.A.

For the Objects of the Guild, Privileges of Membership, and Form of Application.

A. G. The General Secretary, 74 GOWER STREET, LONDON, W.C.

Joint Agency for Women Teachers

74 GOWER STREET, LONDON, W.C.

Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.)

This Agency has been established for the purpose of enabling Teachers to find work WITHOUT UNNECESSARY COST. All fees have therefore been calculated on the LOWEST BASIS to cover the working expenses.

No Registration fees are charged to Members of the above Associations, and their commissions are reduced.

Hours for Interviews—

11 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

Registrar—Miss ALICE M. FOUNTAIN.

UNIVERSITY OF ST. ANDREWS.

L.L.A. DIPLOMA FOR WOMEN.

THE attention of Candidates is drawn to the ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be Teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

THE ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.

39 CAMBRIDGE STREET, HYDE PARK, W.

Recommends highly qualified Teachers and Lecturers with University qualifications (Degree or equivalent).
Secretary—Miss GREEN.

Calling hours—Wed. 3 to 5 p.m., Sat. 11 to 1 p.m.

MISS LOUISA DREWRY gives Lectures, Readings, and Lessons in English Language and Literature and Kindred Subjects, reads and writes papers, examines, and helps Students by entering a Public Reading Society. For information about the Society for the Study of Literature apply by letter.—143 King Henry's Road, London, N.W.

TEACHERS' DIPLOMAS.

The COLLEGE OF PRECEPTORS holds Examinations of Teachers for the Diplomas of Associate, Licentiate, and Fellow of the College in London, Birmingham, Bristol, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, and Plymouth. The Associateship and Licentiate Examinations are held twice a year, viz., in January and in August-September. The Fellowship Examination is held only in January. The Theory and Practice of Education is an obligatory subject for each grade. For Regulations apply to the SECRETARY, College of Preceptors, Bloomsbury Square, London, W.C.

PRELIMINARY EXAMINATIONS

FOR

MEDICAL, DENTAL,

AND

PHARMACEUTICAL STUDENTS.

The COLLEGE OF PRECEPTORS holds Preliminary Examinations in March, June, September, and December. All the Examinations are held in London, Birmingham, Bristol, Cardiff, Edinburgh, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, and Nottingham. For the June and December Examinations there are other Centres, including Blackpool, Brighton, Cheltenham, Croydon, Exeter, Inverurie, Margate, Plymouth, Portsmouth, Sheffield, Southampton, Southport, Sunderland, and York. In March there is a Centre at Inverness, and in September at Aberdeen. For Regulations, apply to the SECRETARY, College of Preceptors, Bloomsbury Square, London, W.C.

MADAME

**BERGMAN ÖSTERBERG'S
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT,
FOR RESIDENT STUDENTS.**

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers.

Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

SCHOOL TRANSFER AGENCY.

(Established
1833.)

Proprietors—Messrs. GRIFFITHS, SMITH, POWELL & SMITH.

Offices—34 BEDFORD STREET, STRAND, AND 22 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.

Schools Transferred and Valued. No charge whatever will be made to Vendors of Schools or School Partnerships, by Messrs. Griffiths, Smith, Powell & Smith, unless a sale is effected or agreed upon.

SPECIAL NOTICE TO VENDORS.

As Messrs. GRIFFITHS, SMITH, POWELL & SMITH have at all times the names of a large number of intending Purchasers of Schools and School Partnerships on their books, they have every confidence in stating that they can readily effect a sale of any desirable Property they may be instructed to dispose of. All instructions receive the personal attention of one of the Partners of the firm.

No commission charge whatever will be made by Messrs. Griffiths, Smith, Powell & Smith, to Purchasers of Schools, or School Partnerships.

Applications from intending purchasers are solicited for the following properties:—

GIRLS' SCHOOLS.

LONDON, N.—Successful BOARDING AND DAY SCHOOL FOR GIRLS, with Kindergarten Department. Gross receipts about £1,000. Number of Boarders 5 and 65 Day Pupils. Price for goodwill about £600.—No. 1,534.

HERTS.—Transfer or partnership. HIGH-CLASS DAY SCHOOL in very attractive part of Hertfordshire. 48 Pupils at fairly good fees. Price for goodwill only £175, or close offer. School furniture, &c., at valuation.—No. 1,535.

KENT (Seaside).—BOARDING AND DAY SCHOOL FOR GIRLS. Income about £1,000. Number of Boarders 12 and 50 Day Pupils. Price for goodwill and nearly the whole of the furniture and effects, £500; only £300 need be paid down.—No. 1,540.

CONTINENT.—First-Class BOARDING SCHOOL FOR GIRLS in beautiful locality, conducted by an English lady. Exceptionally fine premises with all modern improvements. Income about £3,000. Net income about £750. Number of Boarders 28. Price for goodwill, together with the whole of the valuable household and school furniture, £2,500.—No. 1,538.

LANCASHIRE (Seaside).—A client is willing to receive in her superior School a well-qualified lady with Boarding Connexion, and will not (if a few Boarders be introduced) ask any premium. £360 will be required for half-share of furniture, but only a small sum need be paid down. Exceptionally good opening.—No. 1,565.

LANCASHIRE (Seaside).—Successful BOARDING AND DAY SCHOOL FOR GIRLS. Gross receipts about £1,000. Number of Boarders 18, and 30 Day Pupils. Rent of very fine house only £120; this could be nearly covered by letting the house in the holidays. Price for goodwill, £400.—No. 1,537.

MIDDLESEX.—Successful SCHOOL FOR GIRLS in exceptionally good locality and situation. 22 Boarders at £45 to £63 and 85 Day Pupils. Reasonable terms of transfer will be accepted.—No. 1,533.

MIDLANDS.—Successful and good class BOARDING AND DAY SCHOOL FOR GIRLS. Established 16 years. Gross receipts £1,545. Average net profit £250. Number of Boarders 19, number of Day Pupils 38. Rent on lease £135, or freehold could be purchased. Price for goodwill to be arranged. Good reasons for selling.—No. 1,531.

CATHEDRAL TOWN.—Successful SCHOOL FOR GIRLS. Income about £800. Number of Boarders 10, and 34 Day Pupils. Price for Goodwill, £300, or half share, £200. Furniture at valuation. Part of the purchase money could be paid by instalments.—No. 1,587.

BOYS' SCHOOLS.

MIDLANDS.—FIRST CLASS PREPARATORY SCHOOL FOR BOYS. Gross receipts about £3,000. Net about £1,000. Exceptionally fine premises. Extensive grounds. Price for the Freehold, £12,000. Goodwill, £2,000. A fairly large sum could be raised on mortgage.—No. 6,038.

CHESHIRE (Seaside).—PARTNERSHIP IN BOYS' BOARDING AND DAY SCHOOL. Gross receipts past year about £880. Number of Boarders 17 and 10 Day Pupils. Price for half share of goodwill, school and household furniture, only £340.—No. 6,002.

WEST OF ENGLAND (Seaside).—PARTNERSHIP IN BOYS' BOARDING AND DAY SCHOOL. Average receipts over £1,600. Number of Boarders 34 and 10 Day Pupils. Very reasonable terms will be accepted, and part of the purchase money can be paid by instalments.—No. 6,005.

MIDDLESEX.—BOYS' DAY SCHOOL. Income £550. 70 Pupils. Price for Goodwill, School furniture, and Gymnasium £520. Exceedingly good opening.—No. 5,999.

DERBYSHIRE.—BOYS' BOARDING AND DAY. 12 Boarders, 9 Day Pupils. Goodwill £200.—No. 6,013.

NORTH-WEST OF ENGLAND.—PARTNERSHIP IN BOYS' BOARDING AND DAY SCHOOL. Income £1,600 to £1,700. Net about £430. Number of Boarders 21 and 42 Day Pupils. Very fine premises. Price for half-share of profits £300. Very desirable opening.—No. 6,004.

LANCASHIRE (Seaside).—DAY SCHOOL FOR BOYS. Income about £550. Net profit about £500. Rent of house, with excellent school buildings, only £55. Goodwill £1,000. School plant at valuation. The greater portion of the purchase money can be paid by instalments.—No. 6,001.

The Educational Times

AND

JOURNAL OF THE COLLEGE OF PRECEPTORS.

Published Monthly, price 6d.; by post, 7d.

The *Educational Times*, now in its sixty-fourth year of Publication, is the organ of the College of Preceptors. It contains all information concerning the proceedings of that body, with the Class Lists of its Examinations, and is sent regularly to all its members.

It contains also papers on Educational Subjects generally, Monthly Summaries of Educational News and University and College Intelligence, a large number of Reviews, and a Mathematical Department which for many years has had a high reputation both in England and abroad.

OFFICE: 89 Farringdon Street, London, E.C.

Crown 8vo, cloth, gilt top, pp. 376. Price Six Shillings.

ESSAYS, MOCK ESSAYS, AND CHARACTER SKETCHES.

Reprinted from "THE JOURNAL OF EDUCATION."

This volume includes contributions by Jane Barlow; Sophie Bryant; Mary Elizabeth Christie; Hon. Mrs. Lionel A. Tollemache; Sybil Wilbraham; E. B. B.; George E. Dartnell; Dean Farrar; O. Lawrence Ford; J. W. Longsdon; E. D. A. Morshead; Mark Pattison; Francis Storr; Hon. Lionel A. Tollemache; and Professor James Ward, and contains Character Sketches of Jowett, Tom Hughes and the Arnolds, Lord Houghton, Professor Freeman, O. S. Calverley, &c.

"There is not one of the pieces in the book that is dull."—The Scotsman.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

London: G. BELL AND SONS, Ltd., York House, Portugal Street, W.C.

MESSRS. BELL'S NEW EDUCATIONAL BOOKS.

Crown 8vo. 2s. 6d. (Ready in January.)

ADVANCED ENGLISH GRAMMAR THROUGH COMPOSITION.

By JOHN D. ROSE, M.A., Rector of the Kirkcaldy High School.

The present book completes a course of English Grammar for schools according to the methods laid down in the *Elementary English Grammar Through Composition*, by the same author. The title explains the object in view. It is to treat Grammar, not as an end in itself, divorced from immediate utility, but as arising out of everyday forms of speech, and as giving practical help in their mastery and in the completeness of their study.

GEOMETRY FOR SCHOOLS.

By W. G. BORCHARDT, M.A.,
and the Rev. A. D. PERROTT, M.A.

Now Ready:—

Vol. I — Covering Stages I and II of the Board of Education Circular, No. 711, 1909. 1s.

Vol. II — Properties of Triangles and Parallelograms. 1s. 6d.

In the Press:

Vol. III (Areas). Vol. IV (Circles).

Vol. V (Proportion). Vol. VI (Solids).

Vols. II-VI cover Stage III of the Board of Education Circular.

Crown 8vo, with or without Answers, 2s. 6d.

A NEW GEOMETRY.

By W. M. BAKER, M.A.,
and A. A. BOURNE, M.A.

Uniform with "A Student's Arithmetic" by the same Authors.

This volume has been produced in response to the demand for a shorter and more condensed text-book than the *Elementary Geometry* by the same authors, first published in 1903. It is written on the same general lines as the previous work, but the experience of the last eight years and the recommendations of the Board of Education (in their Circular 711, March 1909) have suggested considerable changes.

BELL'S SIMPLIFIED LATIN CLASSICS.

Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham.

Crown 8vo, with Notes, Exercises, Vocabulary, and numerous Illustrations, 1s. 6d. each.

FIRST VOLUMES NOW READY.

CAESAR'S INVASIONS OF BRITAIN.
LIVY'S KINGS OF ROME.

SIMPLE SELECTIONS FROM CICERO'S LETTERS.
CAESAR'S FIFTH CAMPAIGN. (From "De Bello Gallico," Book V.)

The series of books is intended for use in a pupil's second, or possibly third year of Latin. It is designed in accordance with the need obviously felt for such books, and the expression of opinion published by the Classical Association's Curriculum Committee. The idea is to present a portion of a Latin author, selected, arranged, and simplified so as to be within the pupil's powers; to keep the interest which belongs to a continuous narrative, and also retain just enough difficulty to ensure genuine effort.

READY IMMEDIATELY.

VIRGIL'S ATHLETIC SPORTS.

EASY SELECTIONS FROM VIRGIL'S AENEID.

CONTES FRANÇAIS, ANCIENS ET MODERNES.

Edited, with Introduction, Brief Notes, and Vocabulary, by MARC CÉLÉ, Whitgift Grammar School, Croydon. Fcap. 8vo, with or without Vocabulary, 1s. 6d.

This volume, as its name implies, is a collection of interesting stories taken from early French sources. The simplicity and the constant repetition of words and phrases are the main features of the book.

The book will be supplied with or without a Vocabulary, while Exercises and other features, based on every other story, will be provided in a separate book for those who may use them, price 6d.

CONTES D'HIER ET D'AUJOURD'HUI.

Edited by J. S. NORMAN, M.A., Head Master of the New Beacon School, Sevenoaks; and M. CHARLES ROBERT DUMAS, Professeur au Collège de St. Germain-en-Laye. Crown 8vo, Illustrated, 1s. 6d.

This book contains a selection of stories adapted from Rubens, Perrault, and other well-known writers. The volume is intended for second year pupils, and contains a Questionnaire and very full Notes, as well as Biographical Notices of the different authors. The editors are firm believers in the "Direct Method" of teaching modern languages, and the book has been prepared in full sympathy with that movement.

MESSRS. BELL'S LIST OF BOOKS SUITABLE FOR THE CAMBRIDGE LOCAL EXAMINATIONS, JULY AND DECEMBER, 1912.

SCOTT: THE LADY OF THE LAKE. Edited, with Introduction and Notes, by the Rev. A. E. WOODWARD, M.A. Complete (for July Examination). Cloth, 2s. 6d. Cantos I and V separately (for Preliminary). Sewed, 6d. each. (Bell's English Classics.)

their COMPLETE LIST OF EDUCATIONAL WORKS.

LATIN.

ELEMENTARY LATIN PROSE EXERCISES.

Designed as a complete introduction to North and Hillard's "Latin Prose Composition," and may be used from the time when Latin is begun. By the Rev. A. E. HILLARD, D.D., High Master of St. Paul's School, London, and C. G. BOTTING, M.A., Assistant Master at St. Paul's School. Crown 8vo, 2s. 6d.

A LATIN VERSION. 3s. 8d. post free from the Publishers only to teachers.

LATIN PROSE COMPOSITION. For the Middle Forms of Schools. By M. A. NORTH, M.A., Assistant Master at Clifton College, and the Rev. A. E. HILLARD, D.D., Authors of "Greek Prose Composition." Crown 8vo, 3s. 6d.

A LATIN VERSION. 6s. 2d. net, post free from the Publishers only to teachers.

FIRST LATIN BOOK. Being the First Year of a Two Years' Course preparatory to Caesar. By C. A. WILLIAMS, M.A., formerly Classical Master at Hulme Grammar School, Oldham. Crown 8vo, 2s.

SECOND LATIN BOOK. Being the Second Year of a Two Years' Course preparatory to Caesar. By the same Author. Crown 8vo, 2s. 6d.

FIRST LATIN LESSONS. By C. M. DIX, M.A., Formerly Assistant Master in the Oratory School, Birmingham, and Latin and Greek Lecturer in the Birmingham and Midland Institute. Crown 8vo, 2s.

SECOND LATIN LESSONS. By the same Author. Crown 8vo, 2s. 6d.

MATHEMATICS.

PRACTICAL ARITHMETIC FOR SCHOOLS.

By W. G. BORCHARDT, M.A., B.Sc., Assistant Master at Cheltenham College. Complete, 3s. 6d.; with Answers, 4s. 6d.

Or, in Two Parts, 2s. each; with Answers, 2s. 6d. each.

Examples only, with or without Answers, 3s. Or, in Two Parts:—
Part I, with or without Answers, 1s. 6d.
Part II, with or without Answers, 2s.

A Key complete, 10s. 6d. net. Or, in Two Parts:—Part I, 4s. 6d. net.
Part II, 6s. net.

ARITHMETICAL TYPES AND EXAMPLES.

With Oral Examples. By W. G. BORCHARDT, M.A., B.Sc. Types and Examples in One Volume, with or without Answers, 3s. 6d.

Examples only, with or without Answers, 3s.

JUNIOR ARITHMETIC.

By W. G. BORCHARDT, M.A., B.Sc. Complete, 1s. 6d.; with Answers, 2s.

Examples only, with or without Answers, 1s. 6d.

ELEMENTARY ALGEBRA.

By W. G. BORCHARDT, M.A., B.Sc. Complete, 3s. 6d.; with Answers, 4s. 6d.

Or, in Two Parts:—Part I, 2s. 6d.; with Answers, 3s.

Part II, 2s.; with Answers, 3s. 6d.

Examples only, with or without Answers, 3s.

Or, in Two Parts:—Part I, 1s. 6d.; with Answers, 2s.

Part II, with or without Answers, 2s.

A Key to Part I. 5s. net. *Nearly ready.* To Part II *In the press.*

JUNIOR ALGEBRA.

By W. G. BORCHARDT, M.A., B.Sc. Crown 8vo, with Diagrams. With or without Answers, 2s. 6d.

This volume, though based on the author's "Elementary Algebra," contains much new matter, and a large number of easy examples have been introduced. In addition to the ordinary elementary work the course includes Graphs, Indices, Logarithms, and Variation.

Examples only, with or without Answers, 2s.

ELEMENTARY STATICS.

By W. G. BORCHARDT, M.A., B.Sc. With or without Answers, 4s. 6d. **A Key**, 10s. 6d. net.

A SCHOOL GEOMETRY.

Presenting concisely, and in a logical and convenient sequence, formal proofs of the main propositions of Elementary Geometry. By H. H. CHAMPTON, M.A., and the Rev. J. A. C. LANE, M.A., Assistant Masters at Uppingham School. Crown 8vo. With numerous Diagrams, 3s. 6d.

"We do not know a better book to place in the hands of a class of young students just beginning to wrestle with the 'mysteries' of parallelograms, circles, ratios, &c. Every part has been most carefully planned. The hand of the expert and the skilful teacher is seen throughout; everything is presented in the best possible manner. . . . Exceedingly valuable 'papers' follow each part, and at the end are twenty-four pages of miscellaneous papers. We said above we do not know a better book to place in the hands of young people. In many respects it is by far the best elementary course we have seen. Congratulations to authors and publishers!"
—*Schoolmaster.*

HISTORY AND ENGLISH.

A GENERAL SKETCH OF POLITICAL HISTORY FROM THE EARLIEST TIMES.

By ARTHUR D. INNES, Sometime Scholar of Oriel College, Oxford. Author of "A School History of England," &c. Crown 8vo, with Maps, 6s.

AN OUTLINE OF BRITISH HISTORY.

By ARTHUR D. INNES. Crown 8vo, 4s. 6d.

CONTENTS.—I.—Political Outline to 1558—The Anglo-Saxon System—Feudalism—The Growth of Towns—The Rural Population—Industry and Commerce under the Tudors—The Great Transition—Medieval English Literature.

II.—Political Outlines, 1558-1760—Imperial Expansion—Ireland—Scotland—Capital and Commerce—Town and Country and the Poor Law—National Finance—The Elizabethan Age—The Age of Puritanism—The Era of Rationalism.

III.—Political Outlines, 1760-1910—Ireland—Colonial Expansion—India—The Industrial Revolution—Laissez Faire—State Intervention—Combination—Literature under George III and George IV—The Victorian Era.

JUNIOR BRITISH HISTORY.

By ARTHUR D. INNES. Small fcap. 8vo, with Maps, 3s. 6d.

CONTENTS.—Before the Norman Conquest: 1066—The Making of a Nation—National Growth—The Tudor Period—Under the Stuarts—The Georgian Era—From George IV to George V.

AN ELEMENTARY HISTORY OF ENGLAND.

For the use of the Lower Forms of Schools. By CYRIL RANSOME, M.A., late Professor of Modern History, Yorkshire College, Victoria University. Small fcap. 8vo, with Maps and Plans, 1s. 9d.

THE STORY OF ENGLAND. A History for Junior

Forms. By W. S. ROBINSON, M.A., Author of "An Illustrated History of England." In Four Parts. Crown 8vo. With numerous Illustrations, Maps, and Plans.

Part I. **From Early Times to 1272.** 2s.

Part II. **1272 to 1603.** 2s.

Parts I and II in One Vol. 3s. 6d.

Part III. **1603 to 1760.** 2s. *Lately published.*

Part IV. **1760 to 1910.** *In preparation.*

AN ILLUSTRATED HISTORY OF ENGLAND.

For Middle Forms of Schools. By W. S. ROBINSON, M.A., Author of "A Short History of Greece" and "A Short History of Rome." Crown 8vo, in One Volume, 3s. 6d. Or, in Two Periods:—
Period I. **To End of Commonwealth, 1660.** 2s.
Period II. **To Edward VII, 1910.** 2s.

A CLASS-BOOK OF ENGLISH HISTORY.

For Middle Forms of Schools, Training Colleges, Intermediate and Oxford and Cambridge Local Examinations, the Central Welsh Board, Irish Intermediate, Scottish Leaving Certificates, and other similar Examinations, &c. By ARTHUR HASSALL, M.A. Crown 8vo, with Maps and Plans, 3s. 6d.

AN ADVANCED HISTORY OF ENGLAND.

For Upper Forms of Schools and Colleges. By CYRIL RANSOME, M.A. One Vol. crown 8vo, with Maps and Plans, 7s. 6d.

Or, in Two Periods:—

Period I. **To Elizabeth, 1603.** 4s.

Period II. **To Edward VII, 1910.** 4s.

NOTES ON BRITISH HISTORY.

By WILLIAM EDWARDS, M.A., Head Master of the Middlesbrough High School. Crown 8vo.

Part I. **Prehistoric Times to Richard III. 1485.** 2s. net.

Part II. **The Beginning of Modern History, 1485 to 1660.** 2s. net.

Part III. **From the Restoration to the Treaty of Versailles, 1660 to 1783.** 2s. net.

Part IV. **From the Treaty of Versailles to the Death of Queen Victoria, 1783 to 1901.** 4s. 6d. net.

Parts I to IV in One Vol. 10s. 6d. net.

JUNIOR BRITISH HISTORY NOTES.

By the same Author. Crown 8vo.

Part I. **B.C. 55 to A.D. 1485.** 1s. net.

Part II. **1485 to 1660.** 1s. net.

Part III. **1660 to 1783.** 1s. net.

Part IV. **1783 to 1901.** 2s. net.

OCCASIONAL NOTES.

THE best bit of work that the Consultative Committee has yet done is its Report on Examinations in Secondary Schools, issued last week as a White book.

It has been three years in preparation, and is a mine of information which we intend to explore. For the present we must be content to record the conclusion at which the twenty-one members, with one dissentient, have arrived. They recommend the appointment of an Examinations Council, whose function should be to supervise all external examinations in recognized secondary schools. The Council should include representatives of the Universities, the Local Authorities, teachers in the various types of schools concerned, officials of the Board of Education, and in addition a certain number of outside experts representing the other professions and business. "Supervision" would include the co-ordination of existing examinations, if approved, the fixing of standards for a leaving certificate and for a School Testamur to be taken at sixteen. The principal object is to put an end to the present weltering variety of examinations and certificates; but the second object is hardly less important—to combine the work of Inspectors with that of external examiners. We foresee that the difficulty of constituting a fairly representative Council will be almost as great as in the case of the Registration Council; but we have good hopes that the Board of Education, under its new President, will not weakly ignore this Report, as they did the somewhat similar recommendations in 1904, but boldly persevere in spite of the protests which interested Corporations are sure to offer.

THE Head Masters of Eton, Harrow, Winchester, Charterhouse, and Rugby have made, through the *Preparatory Schools Review*, a most important announcement. In their Entrance Examinations for the future Greek will not be expected, nor will it count unless the candidate's work in Latin, French, and English is good enough to place him in the Upper Fourth at Eton or a corresponding form in the other four schools. Greek, where now taught in the lower forms, will be dropped, and in the upper forms will be taught in sets, so as to provide for pupils who join knowing some Greek and the non-Grecians. This is a momentous reform, for the lesser schools of the Head Masters' Conference may be trusted to follow the lead. Of scholarships, nothing is said in the announcement, but it was intimated at Sherborne that in awarding scholarships the same principle will be applied. We hope before long to see the further step taken of excluding Greek altogether from entrance examinations, though Mr. Fletcher denounced this as a policy of weakness. The youthful genius who can profitably learn three foreign languages before he is fifteen is so rare a phenomenon that he may be neglected, and there is still the danger that preparatory schools, whose chief asset is their scholarship record, will waste their energies on the Greek scholarship class.

THE *Oxford Magazine* records "with genuine elation and relief" the vote of Convocation rejecting the proposal of Council to excuse candidates for Honours Mathematics and Natural Science from obligatory Greek in Responsions. We may accept this as a testimony that the opinion of residents is divided, though the vote in Congregation shows that there is a preponderance in its favour. The relief offered was partial and inadequate, and many men of science like Sir W. Thiselton Dyer abstained from voting, refusing to accept "a bone thrown them by the Classicists." The *Magazine* derides the threat of a Royal Commission (which seems to us inevitable) as a scarecrow, and backs a reform set forth by Prof. Ridgeway. In lieu of Responsions he would institute a Joint Matriculation examination in Latin, Greek, Mathematics, a Modern Language, and "some kind of science," to be passed at or before the age of seventeen. We sincerely hope that the proposed Examinations Council may establish some such certificate which shall admit to all Universities, but the notion that it will include Latin and Greek and not include English of any kind is too absurd to be contemplated.

SIR ROBERT MORANT possesses in a marked degree an appetite for work and a power of gripping essentials. He knows how to control others and to make the administrative machinery efficient. Without hesitation we give him credit for the desire that the Board of Education should be an effective help in the training of the nation's children. We believe he will prove an able administrator of the Insurance Act. If hard and unremitting work constitutes a claim, then has Sir Robert earned his promotion. His position at the Board has not been a bed of roses. Rarely has a Government Department been so continuously subjected to public criticism as has been the lot of the Board since Sir Robert's appointment to the secretaryship. Such constant

criticism is not good for education. How far Sir Robert is personally responsible for this friction we need not discuss; we merely point out that the circumstances have been detrimental to the progress of education. In these columns we have opposed with some vehemence the attitude—obstructive as we deemed it—of the Secretary towards the Registration of Teachers. Wherever the blame lay, it is clear that it is the head of the Department who must face the dissatisfaction caused by the delay.

IT is possible that Sir Robert Morant may be able to produce, as his last important official act before leaving the Board, the Order establishing the Teachers' Registration Council. It is known that

Mr. Selby-Bigge. all details are settled, except the important matter of the contribution of the Treasury towards expenses. More probably it will be left for his successor to promulgate this long awaited charter. The new Secretary, Mr. Selby-Bigge, has been a Fellow and Tutor of his College, an assistant Charity Commissioner, and has served in three sections of the Board of Education. His promotion is normal. We do not approve in general the principle of bringing in an outsider to a post of importance instead of promoting from the inside. Mr. Selby-Bigge is a capable man, and we think his appointment to be a wise one. We hope the Board will now settle down to a period of quiet work undisturbed by acrid and unsympathetic criticisms. The names of many distinguished persons were mentioned in the newspapers as likely to succeed Sir Robert. The appointment of Mr. Michael Sadler would undoubtedly have been welcomed by the teaching profession; but Mr. Sadler has just settled down to his new work as Vice-Chancellor of the University of Leeds, and it is not probable that he would have consented to go to the Board. Whatever educational post he held, Mr. Sadler could hardly be reckoned as an outsider.

IN his Presidential Address to the Training College Association, Prof. Adams remarked that, old-fashioned as he might seem to the young idealist, the head teacher under whom he worked was himself in

Prof. Adams on Training. most instances trained and therefore had had his ideals. His audience doubtless accepted this as a just observation, but the secondary assistant master will have read it with a sardonic smile. Not more than a score of teachers were entered on Column B of the old Register as fully trained, and of these there are two or three at most on the roll of the two Associations of Head Masters. So far, though some have recruited their staffs with men trained in the elementary colleges, most of them have paid only lip service to training. On so trite a topic it is hard to say anything new, but Prof. Adams dealt effectively with one of the commonest objections. There is, say the critics, no theory of education; professors of the so-called science are as much at loggerheads as Free Traders and Tariff Reformers. On the contrary, Prof. Adams tells us that educational theory is so far consolidated that the whole time of training-college students might be profitably occupied on non-controversial matters. One other point in the Address deserves notice. Under the new regulations all candidates for admission to recognized training colleges will have had experience of the secondary school. The interpenetration of primary and secondary methods promises to prove an almost unmixed gain to both.

ONE of the most striking features of the great Coronation Durbar, held at Delhi in December, was the fact that the King-Emperor's declaration opened with a reference to education. The significance of this cannot be missed. The words are:—

Education in India.

Humbly and dutifully submissive to His Most Gracious Majesty's will and pleasure, the Government of India have resolved, with the approval of His Imperial Majesty's Secretary of State, to acknowledge the predominant claims of educational advancement on the resources of the Indian Empire, and have decided in recognition of a very commendable demand to set themselves to making education in India as accessible and wide as possible. With this purpose they propose to devote at once fifty lakhs to the promotion of truly popular education, and it is the firm intention of Government to add to the grant now announced further grants in future years on a generous scale.

It is gratifying to find the Government of India thus frankly submitting to criticism, and we shall watch with sympathetic interest the efforts of the administration to promote "truly popular education." Fifty lakhs of rupees (£333,333) will provide one farthing per head of the population, and we cannot expect much for the price of two sparrows. At this rate, which is not expressly guaranteed, it would take half a century to spend on education as much as will shortly be required for the transfer of the capital from Calcutta to Delhi. But one need not cavil at the amount, for a great step has been taken in making a great confession.

HARDLY less significant is the admission that indigenous scholarship has hitherto received too little encouragement. It is now ordered that "on all holders, present or to come, of the venerable titles of Mahamahopadaya and Shamsululuma shall be conferred some annual pension for the good report of the ancient learning of India." The most distinguished Sanskrit and Arabic scholars in India, for whom the present educational system has furnished practically no opening, are now acknowledged to be among the Empire's valuable assets, and Oriental learning will regain something of its old prestige in India.

Indigenous Scholarship.

MANY arguments have recently been adduced for the change of capital; to these might be added the consideration that Delhi is the centre of that portion of India where popular education is at present most backward, and that the northern provinces may now reasonably expect a more generous recognition of their pressing need of elementary schools. The Chief Commissioner of the North-West Frontier Province has already made a good beginning; he has issued a circular making primary education free throughout the province from April 1, 1912, and, at the same time, raising the minimum pay of teachers from 7s. 6d. to 18s. 8d. a month.

Change of Capital.

THE pressure of outside examinations has been found an intolerable burden by the Manchester Warehousemen and Clerks' Orphan School. The Executive Committee, after close consideration and exhaustive inquiry, have decided to forgo the advertisement that a long list of successes in the local examinations afforded to the school; in order to lighten the curriculum, cut down school hours, relieve the concentration upon the subjects of the external examination, and so make time for the

The Pressure of Examinations.

introduction of fresher interests. The Committee have taken a bold and, at the same time, in our opinion, a wise step. It is not well that the whole curriculum of a school should be dominated by an external examination in such a way that, from first to last, the pupils' interests are concentrated upon passing in certain subjects. An examination taken in this way has a cramping effect upon the intellectual growth of the children. The curriculum of the school is to be entirely reorganized, and the Northern Universities' Board is to inspect and examine the school in consultation with the teachers. In other words, the examination will be made to fit the school, and the school will be relieved from the strain of making the school fit the examination.

THIS is not the place to write a notice of Mr. Stephen Keynolds's "Seems So"; but, in reference to Mr. Sadler's remarks upon the book and to Mr. Reynolds's letter in the *Times*, we wish to say one thing. It is no doubt true that organized elementary education, just like all other organized education, has many defects. But it is exactly the last forty years of organized public elementary education that has enabled the people to grow articulate and to criticize the education that the legislators have offered. It is precisely because of the opportunities of education that have been enjoyed by the present generation of working people that the democracy is beginning to understand what are the possibilities of education, and to ask, not only for more, but for a more reasoned system based upon the best scientific knowledge. It makes Mr. Reynolds "savage" that youngsters should spend eight or nine years in a school "catching nasal catarrh and snobbery" and not be able to write a letter. Once they were satisfied not to know how to write a letter. Now they claim the knowledge as a right. So much progress at least we must allow.

IN the House of Commons Mr. Rendall recently brought up again the question of the tenure of assistant masters, by asking Mr. Pease whether he was aware that in a scheme for a certain grammar school no provision was made by which an assistant master under notice to leave can appeal to, or appear before, the governors, his employers. Mr. Pease replied with the well worn statements which to us carry no conviction. He said that in the scheme in question the usual provision was made. In the case of dismissal with notice, no appeal was allowed; but that dismissal without notice could only be enforced after the governors had given their approval. He added that the Board had given very careful consideration to the subject and were unwilling to give any right of appeal to the governors. So it remains that an assistant master is appointed and paid by the governors, but is liable to dismissal, after notice, by the head master without reference to his employers. We hold this state of affairs to be very unsatisfactory.

SEVERAL valuable Circulars in reference to the teaching of subjects in secondary schools have been recently issued by the Board of Education. We are thinking in particular of the circulars on English, Physical Training, and House-craft. It has long been felt that the subject of Modern Language teaching should be dealt with by the Board. It will be no easy matter.

There are almost as many varieties of method as there are individuals teaching the languages. But the Board have undertaken to issue a Circular. In the preparation of this, the Board have available a staff of specialist Inspectors, several of whom have been teachers in secondary schools. But the Board have most wisely decided to call in the Modern Language Association and other bodies of secondary teachers, and to consult them. Nothing shows more clearly the desire of the Board to work in co-operation with teachers. We do not want codes and regulations thrust upon us from the outside, without reference to our views or practice; but we do want guidance and information. This is what a memorandum from the Board can give.

THERE is, we believe, a widespread misunderstanding among teachers in reference to the visits of Inspectors. Many teachers think, quite wrongly, that when an Inspector comes into the room he expects to hear the teacher talking all the time. Consequently the teacher goes on talking when he knows quite well that the class have listened long enough and ought now to be working. The Inspector leaves the room mentally noting that the teacher is inclined to talk too much. This is one of the evils that has resulted from the inspection of schools. There is a tendency to feel that, if one is not always actively teaching, there is a danger of adverse criticism if the head master or Inspector chance to walk in. It is a good principle to lay down that the less the teacher talks the more work is done by the class. Occasionally no doubt the Inspector likes to hear a lesson; but for the most part he prefers to see the children working. The moral to be drawn is that the teacher should remember that the rôle of listener is a dull and inactive one; the boys want to be doing something. He should go on with his work in the Inspector's presence just as he would have done otherwise, and not give a suddenly improvised lecture lesson merely because the Inspector is present.

THE Chairman of the Surrey Education Committee has written to the Educational Supplement of the *Times* to remove a "misapprehension" in reference to the dismissal of an assistant master at Dorking High School. He takes the opportunity of pointing out all that the Surrey Education Committee have done for secondary education in the county. With the latter part of his letter we are in accord. Much good work has been done, and the county has gained a deserved reputation for the generous treatment of secondary schools. But the Chairman does not meet the point that we made in our recent reference to this unhappy incident. The County Committee called upon the governors to make some economy in the staff. "The organization of the school made it desirable that the numerical strength should be retained, and they [the governors] chose the alternative of replacing a more highly by a less highly salaried assistant." This is what the Chairman writes of the action of the governors. Exactly the danger that we feared when salary scales were introduced without an elastic income. The Surrey Committee do not seem to realize that a small school must be more costly relatively than a large one. The master in question appears to have been dismissed for no reason except that economy might be effected by filling his position at a

lower salary. It is just this action that gives a feeling of insecurity to all teachers. In the A.M.A., candidates for appointment at Dorking are requested to apply to the Honorary Secretary of the Association of Assistant Masters for information.

IN elementary schools it is usual for the physical exercises to be taken by the class teachers. In secondary schools the principle of specialist teachers is firmly established, and so we find often that an ex-Army sergeant has charge of the physical drill and the gymnasium.

Wanted: Physical Instructors in Boys' Schools. If every form master would qualify himself to give physical instruction, he would find a resultant benefit to his own health as well as to that of the boys. But such action would probably not remove the necessity for a specialist in gymnastics. At present it is almost impossible to find a man with a secondary school and University education who is also qualified to take charge of the gymnasium. In girls' schools there is no difficulty in getting a gymnastic instructor who ranks with other members of the staff, greatly to the benefit of the school. We recognize that physical instruction is an essential part of school life, in addition to games. In other subjects we have seen the evils of the visiting teacher who does not rank with the rest of the staff. If men of University education, whose tastes happen to lie in that direction, would qualify themselves to become physical instructors, their services would be readily accepted by the schools.

THE London Education Committee propose to reduce classes in elementary schools to forty for upper departments, and to forty-eight for infants. We here

The Size of Classes. see the lingering tradition that infants are like dumb driven cattle and may be herded. As a matter of fact, it is more essential for the infant classes than for the senior classes to be small. The proposal of the L.C.C. is, however, a move in the right direction. Statistics show that in London the average number of children to an assistant teacher is under forty-five; but the "average" is not of much consolation to class teachers who have sixty children. The enormous difference that will result when these proposals are carried out may be gathered from the fact that an estimated expenditure of £4,500,000 will be incurred during the next fifteen years in building new schools and in remodelling existing schools in order to reduce the size of classes to the numbers mentioned. At the same time there will be a large increase in the salaries' bill. The rate-payer must learn that money wisely spent on education increases the capital of the nation.

AN interesting variation in the curriculum has been introduced into the Welshpool County School in the form of an agricultural course for boys who intend

An Agricultural Bias. to manage farms or work upon the land. The head master, Mr. R. E. Owen, sends us the detailed syllabus, which appears to be thoroughly sound. The primary aim of the course is not to train boys to be farmers any more than a course in manual instruction is designed to turn out carpenters. Welshpool is in an agricultural area, and it is an admitted educational principle that the environment of the boys should form the basis of their education. The scheme is an attempt to carry out this principle and to graft an

agricultural course on to the ordinary curriculum of a secondary school without destroying the balance of subjects. There is certainly an erroneous idea abroad that it requires greater ability to become a commercial clerk than to manage a farm. The school at Welshpool will do something to correct this error. We understand that the Welsh department of the Board of Education intend to issue the syllabus in the form of a circular to secondary schools. It will give valuable information to head masters who see their way to base some part of education upon work on the land.

MR. T. E. PAGE, who has been for many years Chairman of the Consultative Committee of the Surrey Education Committee, has now been appointed a "selected member" of the Education Committee in place of Dr. Rendall, who has resigned. We hope that Mr. Page can spare leisure for still further public work. Secondary teachers are but scantily represented in the House of Commons. The election of Mr. Page to a seat in Parliament would bring into the House a man of outstanding personality, as well as a schoolmaster who has been Chairman of the Association of Assistant Masters, and who has frequently represented in public the interests of secondary education. Mr. Page has already shown his willingness to stand. We commend the suggestion to the Associations of Secondary Teachers.

LOCAL AUTHORITIES.

A GREAT deal of sound wisdom is often hidden away in reports of public bodies, which are read by very few people. This strikes us especially in reference to the report of the London County Council on their educational work. Although the London County Council have had their troubles about school buildings and medical inspection, and have met with much adverse criticism, yet the number of wise educational activities they are carrying on indicates a determined effort to grapple with their opportunities and responsibilities. If one may take the words of the report as reflecting the minds of the Councillors, we may take it that the Council views its duties very seriously. "One of the fundamental duties of the Council," we read, "in connexion with education is to see that all those children and young people who are entrusted to its care are so trained and taught as to enable them to play their part worthily as citizens of the Empire. . . . It will always be of supreme importance that they should be true, sincere, and honest in their lives, that they should be both well informed and sound in judgment, both self-reliant and considerate of the welfare of others." This is the right ideal, and although it is harder to estimate than examination results, we feel sure that the Inspectors are able to estimate the work of the schools rightly from this point of view, and that they do so.

WE will quote another extract from the same report (a memorandum supplied by one of the Council's Inspectors), which shows an enormous progress in the official view of the work of teachers. Mr. Mouilpied writes: "A child's mind can be filled with chemical facts which are glibly retailed so that the child shows up well in examination. Experience shows that these facts, dimly apprehended, soon fade from the memory, and there is nothing left. But, if the aim has been to teach the child to observe correctly, to record observations with accuracy at the time, to make experiment the final court of appeal, to equip him so that he will know where to turn for the facts he wants, to train him to face a new problem with an open mind, and to attempt the solution along certain lines, then when the facts have gone the habit still remains as a valuable weapon for life." If more Inspectors would speak frankly in this way and would show their power of finding out whether a child is learning habits of observation or

merely learning facts, they would go far to raise the standard of teaching throughout. For it is indisputable that at present many teachers feel that their work is judged by the amount of knowledge possessed by their pupils, and they plan their work accordingly.

A CHART in the report gives graphically the progress that has been made during the last eighteen years in improving and increasing the staff. In the year 1893 there were 61.8 children to every assistant teacher. The number has diminished steadily until, in 1910, the number was 44.9. Particulars are also given of the qualifications of the staff in 1904. At that time there were 800 supplementary teachers, 1,597 uncertificated teachers, and only 1,168 certificated teachers. In 1910 there were 2,571 certificated teachers, and only 567 uncertificated and 162 supplementary. This gradual change in the direction of getting fully trained teachers has increased very considerably the cost of education. In the year 1908-9 teachers' salaries amounted to 57.2 of the total cost of the schools. In making the classes smaller there has to be included the cost of additional classroom accommodation, as well as the increase of staff. Further improvement in both directions is to be expected. Although the average is 44.9 children per teacher, it is clear that many classes are still too large.

We have referred before to the question of ventilation in schools; but, until great improvement takes place, speaking in and out of season is justified. Accordingly, we quote an extract from the report of one of the medical officers of the county of Durham, which is supported by our own experience. Dr. Burn says: "I have in mind several schools where the ventilation was both structurally bad and unintelligently utilized; where there was practically not a normal throat amongst those examined." Dr. Burn finds teachers "quite unmoved" by the unventilated condition of the classrooms. "I would like to emphasize," continues Dr. Burn, "the pressing need for instruction to teachers in the main principles of school hygiene, for, while the state of the school atmosphere is often a matter of defective structure, it is just as often a case of the unintelligent use of the ventilating agents available. . . . I venture to state that 60 per cent. of the schools by midday are so close and foul as to be nauseating to one entering from the fresh air; in 40 per cent. of these this condition is avoidable." Teachers are often strangely ignorant or apathetic in this matter; and school architects have been in the past, and sometimes still are, oblivious to the need of fresh air.

A VERY valuable part of the report of the Durham County Council is the memorandum on the inspection of elementary schools prepared by the Secretary from the reports of the Council's Inspectors. The whole memorandum bears witness to the changed relations that exist now between Inspectors and teachers. But the evils arising from payment by result have left their mark upon the schools. The Inspectors have serious fault to find in some cases; but we venture to think that any teacher in the county reading this memorandum will agree with its aim. To summarize briefly, it may be described as a training-college lecture to teachers. That such a lecture is necessary at the present time reminds us that many teachers have not been trained, and that many have been unable to throw off the burden of the old payment-by-result days. The important point, in our judgment, is this: the reports show that the Inspectors are not judging the schools on examination results, but that they are trying to estimate the value of the teaching in the development of the character of the child, and pointing out to the teacher how he may train the will rather than cram with facts.

So much energy has been shown by women in taking up public work, especially education, that we read with some surprise in the report of the Surrey County Council that a number of Boards of Managers in this county are still without lady members. There has, however, been an improvement in this respect since 1904. In that year there were 78 boards with lady members; there are now 117. During the same period the number of lady managers has increased from 101 to 156. The Committee express the opinion with some emphasis that every body of school managers should include at least one lady.

THE Northampton Polytechnic Institute in London announces complete day courses of instruction in Aeronautics. The equipment has been much increased, and it is hoped that valuable work of a research character will be done by the senior students during this

winter. The first two years of the course will be devoted to the subjects that form the groundwork of all engineering, and the necessary specialization will take place in the third and fourth years.

THE Warwickshire Education Committee are somewhat exercised at the refusal of the Board of Education "to recognize the county minor scholarships examination as the qualifying examination for candidates for free places at secondary schools in the county, on the ground that the examination includes history and geography. Implicitly too they suggest that the standard of this examination is too high for these candidates." We share the perturbation of the Education Committee. It seems to us that, unless some clear scandal or distinct miscarriage of justice were alleged, the Board should leave the county free to examine its own candidates in the way that seems best to it. Apparently the Board make no objection to the inclusion of history and geography in the examination for county scholarships, but they object to these subjects for free-placers. This is to duplicate the examination. At present, one examination suffices. The best candidates receive scholarships, the less good are given free places. The Board have really more important work to do than to trouble about minor details such as this.

THE Leicestershire Director of Education has been making a tour of the schools in his county, and has much of interest to say. He is convinced that great steps have been taken to make the education more liberal and less mechanical. In regard to the reports of the Board's Inspectors he makes a valuable suggestion. These reports, as now issued in Leicestershire, he says, are of a detailed character, and afford the most helpful criticism of the various school activities. "They can only be understood and fully appreciated when their details are considered in consultation with the head teacher on the spot." It is this last phrase that we consider so important. It is always difficult for a committee to discuss a report on a school of which they have no intimate and first hand knowledge, and the head teacher of which is not present to give information and explanations. We wish all school reports could be discussed under the circumstances that the Director of Education in Leicestershire desiderates.

MESSRS. GRIFFITHS, SMITH, & Co. desire to correct the "absolutely misleading paragraph" as to charges made by agents for non-resident appointments. They beg to state that their charge to assistant mistresses for non-resident posts is 4 per cent. on the first year's stipulated salary. If the appointment is for one term or less, a commission is only charged on the amount to be received. As we stated before, we were only quoting from the report of the Surrey Education Committee.

SCIENCE NOTES.

FUTURE historians of science will probably refer to the year 1911 as an *annus mirabilis* in the history of meteorology. The summer was unprecedented in the annals of scientific observation, and its effects on existing hypotheses of weather causation are positively disruptive. For example, the pressure distribution led to the prediction of copious rainfall at the Coronation, but, happily, the weather proved more amenable to sentiment than to science. A hundred thousand children at the Crystal Palace failed to get wet through. Dr. W. N. Shaw does not at present attempt an explanation, but he gives an indication of the direction in which he hopes to discover one. He suggests that "weather as represented primarily by rainfall is dependent on the convection of moist air, while pressure distribution is governed by changes which take place above or nearly at the top of the convective region of the atmosphere. In other words, the dynamics of the atmosphere is controlled in the upper air, while the physics of the atmosphere is a matter which concerns the lower layers." In a subsequent communication, Dr. Shaw compares a portion of the atmosphere to the air in a concertina played softly by giant hands above and below. In the case of cloudless air, the down stroke would warm the air by compression and thus increase its potential dryness. Thus, a rise in the barometer would indicate continuance of fine weather. The other stroke of the concertina, the rarefaction, would cool the air and might produce cloud, possibly at more than one level. The falling barometer supplies a condition of instability, with the possibility of continuous or fluctuating rainfall. Whether

the rain actually occurs will depend on the concurrence of a supply of the suitably moist air. Quite a different hypothesis is put forward by Dr. Ramsauer, who attributes the fine summer to diminished solar activity. In his view, the diminution of ultra-violet radiation spelt fewer condensation nuclei in the atmosphere. Clearly the science of meteorology is emerging from the pupal stage—the chrysalis skin is inadequate for its new metamorphosis. The ecdysis is not the less interesting because we cannot predict the form of the coming imago.

To drop at once from the plane of work of the Meteorological Office and the Heidelberger Akademie to the modest level of our own classroom and children may seem rather a bathos. However, we teachers

can often very wisely do a little work on a small and simple scale at topics which are exercising at the very moment the investigators at the growing-point of our subject. Some uncertainty as to rules for weather prediction may stimulate, rather than check, our meteorological observations. We advise our readers who have not yet tried the plan, to get boys or girls to chart observations of a wet and dry bulb thermometer—out of doors, of course. For some time we based simple local weather predictions solely on such a record, prophesying fine weather when the graphs diverged and *vice versa*. The result in our own case was that the boys of a large boarding school held our weather-wisdom in exaggerated respect.

AT a recent meeting of the London branch of the Mathematical Association a powerful onslaught was made by Miss Burstall on the mathematics forced upon all girls who desired to matriculate. Marshalling her arguments with singular forensic skill, Miss Burstall made a deep impression on her audience, many speakers in the subsequent discussion testifying to the convincing character of her demand for the repeal of the present compulsory "mathematics." It would be entirely wrong to mistake her paper as a plea for dropping mathematics from the curriculum; Miss Burstall indicated that such a syllabus as was issued by the Mathematical Association last January as a minimum course in algebra might be adopted for the non-mathematical majority of girls. The present examination requirements do grievous harm to all but the mathematically minded minority.

MUCH as we appreciated the good quality of the speaking on the occasion to which we refer, it shed a somewhat ghastly light on the condition of secondary education. Met together ostensibly for the purpose of debating the best means of giving to girls a mathematical training, the whole time was spent in discussing examination requirements. Not a single speaker ventured to put forward proposals for giving girls sound concepts of the relations of space, number, and time and of their application to the intelligent observation of everyday phenomena and to the control of physical energy in its varied forms. It would be difficult, and indeed it is superfluous, to find a clearer illustration of the need for the reforms which the Consultative Committee are now pressing upon the Board of Education.

WHEN lantern slides are being shown to an audience numbering over a hundred, it is necessary to project the pictures on a large scale. Such large pictures are not merely unnecessary, but prejudicial in the case of classroom demonstrations. For large pictures the room must be really dark, the lamp powerful, the lenses rather short in focus if the room is of ordinary size, the screen large and unwieldy. Such large pictures are unpleasantly coarse and the light is trying for those near the screen. It is far better to show a clear, well lit, well focused picture of moderate size, with a dark margin of screen forming an effective background. Personally we like a picture of from six to seven feet diameter, and to use an objective of eight-inch, or preferably of ten-inch, focus. The number of slides exhibited in one lesson should not exceed twenty-five.

THE London County Council Conference for Teachers organized by Dr. Kimmins will be held at Birkbeck College on the 4th, 5th, and 6th of this month. There will be several papers which deal with subjects on the borderland of the science teacher's work. When these Conferences were inaugurated fifteen years ago, great prominence was given to physics and chemistry. May we suggest that experimental science has been a little left out in the cold of late years, and venture to hope that Dr. Kimmins will return to his first love?

THE RELATIONS OF SCHOOLS TO UNIVERSITIES.*

By DR. JAMES GOW.

IN Germany, and, I believe, in every Continental country, the Universities have nothing whatever to do with the schools. It is true that in Germany a boy cannot proceed to a University unless he has passed an examination, but this examination is not either prescribed or conducted by the Universities, but is managed by the State. In England, on the other hand, the Universities prescribe and conduct their own Entrance Examinations, and are willing, if invited, to come to the schools and conduct the examination there; and, further, of late years, the Universities have agreed to accept, with certain limitations, one another's Entrance Certificates. Thus the connexion of the Universities with the schools, though voluntary on both sides, is pretty close, and likely to become closer as it grows in convenience.

For my part, I feel that a discussion of the relations between the Universities and the schools is likely to be confused, first, because some speakers will have in mind *ideal* relations of ideal Universities and ideal schools, while others will be thinking of the best possible relations between actual Universities and actual schools; secondly, because we have in England two types of Universities and two types of schools—what I may call the "boarding" type and the "day" type. Thus, both the idealists and the opportunists may be talking, each in their own way, of four different schemes of education, viz. :—

Boarding School + Boarding University,
Day School + Day University,
Boarding School + Day University,
Day School + Boarding University,

and the relations between the Universities and the schools in each of these schemes need not be, and perhaps ought not to be, the same. Obviously, it is more expedient for the Boarding University to have a general entrance examination closely connected with school work than it is for the Day University, which might have only an entrance examination for each faculty or none at all. And, again, to be examined by the Universities is obviously more convenient to the boarding school than to the day school.

If I tried to deal with these complexities, I should occupy far more than my fair share of your time. I mention them only to show that I am aware of them and do not pretend that in what I have to say I am dealing with more than one small portion of the subject. I shall, in fact, confine myself entirely to the connexion of Oxford and Cambridge with the schools.

This connexion, it must be remembered, is of recent origin. In the sixties of the last century, the Cambridge "Little-go," properly called "the Previous Examination," could not be taken except by undergraduates in their fourth term of residence or later. In the early seventies it could be taken in the second term of residence, but not sooner. Meanwhile, the Head Masters' Conference had been instituted, and this was, as it still is, a club of the head masters of those schools which send a considerable proportion of their boys to Oxford and Cambridge. The Conference was of opinion that Oxford "Smalls" and Cambridge "Little-go" were rather trivial examinations which might well be taken at school, and which, if deferred, were a serious interruption to better work. Representations to this effect were made, and, in November 1873, the Universities signed a concordat by which the Oxford and Cambridge Schools Examination Board was created. This Board was empowered to examine schools and to grant certificates exempting from the first examination in either University or both. The subsequent developments of this scheme need not detain us, but it may be well to mention that the Oxford and Cambridge Local Examinations, though considerably older than the examinations of the Joint Board, did not, until recently,

* This paper was read before a meeting of teachers.

confer any exemptions, and do not now confer any except at their own titular University.

This history points to some facts which are of importance to the present discussion. The connexion of the schools with Oxford and Cambridge was not accidental but deliberate, and was due to more than one cause. In the first place, the schools had immensely improved in general efficiency since the early years of the century. It would appear that even classics, at a time when little else was taught, were not taught very well at most schools; for more than once, in the days of Gladstone and Macaulay, Shrewsbury boys who were not yet in residence at the University came up and beat the elite of the undergraduates. No such thing has happened in living memory. The curriculum had evidently become much wider, and the teaching more strenuous, when head masters demanded that "Smalls" and the "Little-go" should be taken at school. The improvement was probably caused by these very examinations which, if I remember rightly, were not instituted till about 1830.

But the postponement of these examinations became a grievance when head masters began to contemplate specialization of studies at school. So long as boys kept up their classics and mathematics and French to the very end of their school course, it mattered little that they should be required to take an elementary examination in these subjects in a year's time. But, when it was desired that a boy should drop at school such subjects as he was not likely to excel in, then the prospect of a distant examination in those subjects became disagreeable, and it seemed important that this examination should be got rid of early.

Thus the connexion of the schools with the Universities was caused in part by educational movements in the schools; but it was also caused by another movement which was not educational at all. The Public Schools Act of 1868, the Endowed Schools Act, and the Education Act of 1870 created a fear that all schools would soon be placed under State control, and the schools resorted to the Universities in order to protect themselves from the Education Office. It may be that this last motive was the most potent of the three that I have mentioned, but it is clear that all three were in operation and assisted to bring the Universities and the schools together.

The connexion appears to me to offer some advantages which could hardly exist under another system. The Universities of Oxford and Cambridge, being boarding Universities and looking for their effect very largely to their social opportunities, are probably right in requiring from all their students a certain minimum of common knowledge, such as every man should bring to an intellectual society. The choice of this minimum ought to be left to the conductors of the society. To deprive them of it by means of a State examination would, or might, make a great deal of difference to the value of University life.

It is true that the Universities confine their choice to a very narrow curriculum, but they fix no age limits, they do not interfere with methods of teaching, and their examination is not regarded by the public as a "leaving examination." These are great merits from the point of view of the schools. Imagine, on the other hand, the effect of a State examination. It would no doubt allow a far larger choice of subjects and would do away with the host of professional examinations which now disturb the work of the schools. These are considerable advantages, but the examination would probably have an age limit and would be regarded as a leaving examination and the end of all learning. Furthermore, though the State would probably profess not to interfere with methods of teaching, I think it could hardly avoid doing so in fact. For the criticism of a State official is criticism which can be supported by very severe public penalties. For instance, the State now says to certain schools that they must teach Latin, and recommends a particular pronunciation of Latin. Other subjects are very likely to be treated in the same way, and the teacher will not, by resistance, imperil his grant or expose his pupils to wholesale rejection. At present, also, the State does not seem to me nearly so successful as the Universities

in maintaining a standard of attainment, but I dare say this is an accidental defect and could be remedied.

It will be easily guessed that my opinions proceed from the fact that I regard the teacher as an artist who, having a certain work to do, should be allowed to do it in his own way. No artist, so far as I know, objects to having his subject chosen for him. I never heard that a painter or a sculptor was indignant at being asked to paint or carve, say, an altar-piece of a given subject and of given dimensions; or that a musician, when asked for a symphony or overture, insisted that he ought to compose a quartette. On the contrary, I believe that every artist is stimulated by limitations of subject, size, and so forth—limitations of the end in view—but resists attempts to hamper his method. He will gladly do what is wanted if he is allowed to do it in his own way. Similarly, the good teacher, in my experience of him, does not complain of set subjects or set standards, if he is allowed to teach in the way that suits him best. I have, in former days, advocated uniformity of curriculum, and I should not object if the State established certain types of schools and required me to conform to one of them. But I should object very strongly to being told how to handle the several subjects of the curriculum, and I should wish the examination and inspection of my school to be undertaken by the Universities. They have an interest in making the schools as good as possible, but their criticism carries no penalties and is the criticism of fellow-craftsmen.

It seems to me essential to the welfare of our profession that there should be a lively free discussion of difficulties and a perpetual exercise of the intelligence in all grades. This freedom and initiative are secured in Germany by the fact that the Leaving Examination is conducted by the teachers under the superintendence of Inspectors who have themselves formerly been teachers. The nearest approach to this system that we are likely to get in England is to entrust examination and inspection to the Universities.

SCOTTISH NATIONALISM.

ONE of the pleasing features of official reports on education in Scotland is that there is in them no attempt to force national sentiment into prominence. On the contrary, in Sir John Struthers' recent report on secondary education it is pointed out that at certain stages of school work too much emphasis is being laid upon early Scottish history, and some examiners complain that throughout the pupils' answer-papers the point of view is too exclusively Scottish. Sir John shows that this result is probably due rather to imperfect grasp of the subject than to excess of patriotism, and he desires teachers to make more of points of contact with the history of England and of Europe generally. At the same time, he thinks it serious that Scottish pupils can reach the intermediate stage without hearing of the episode that the word "Glencoe" should at once suggest to Scottish memories.

Nationalism does not flourish in Scotland; perhaps from the lack of any common grievance, real or assumed. Her distinguished writers are rightly content to contribute, as Scott and Carlyle and Stevenson did, to the common treasure-house of English literature; and those who control her educational policy have made no attempt to distort methods or curricula for the purpose of deliberately forcing the growth of what is called national sentiment. This is fortunate for Scotland. A great Irish critic has said: "Whenever the genius of a nation is strong it works in deep and obscure ways. The attempt to whip up deliberately, and by artificial means, the national spirit in literature is evidence of the decay of that spirit." The same may be said of education, for in both cases the fostering of national sentiment tends to connect itself with the study of the nation's past, and with the use of the vernacular tongue.

The question is not one that concerns Scotland only. Like the Scots, the peoples of Wales and Ireland are each

credited with a distinct "nationality," the essence of which is a matter of constant dispute. Much of the discussion is merely a question-begging attempt at race psychology, usually vague and often worthless. Some time ago Lord Haldane assured us that in the soul of the Welsh people there is a fire more Celtic than Saxon, that they have the gift of imagination, and that the Englishman is, by comparison, short of ideals: this defect is made good by the "large permeating ideas" which Wales and Scotland have contributed to the common stock. Yet he seemed to admit that, after all, it is only in and through the unity of national life that the value of the contributory elements is to be realized—in religion, in education, and in literature, as well as in politics. The fact is that there is no agreement in regard to the fundamental characteristics of each nationality. Even the Celtic "melancholy," of which Matthew Arnold found so many evidences at second hand, appears to be in doubt; in a recent review of Kuno Meyer's "Ancient Irish Poetry" we are told, "Rather the dominant note is one of joy and high spirits and a delight in all beautiful and fair things." And thus the critical ball is kept a-rolling for literary or political purposes, noble or ignoble.

It is hardly worth while to point out how little either race or language actually has to do with national spirit, for the nationalist everywhere persists in appealing to racial origins and linguistic affinities, and scientific research seems powerless to dissolve what Max Müller called "the unholy alliance" between Ethnology and Comparative Philology. That being so, we must perforce accept the view that language is at least a buttress of nationality, and that a belief in racial affinity may be, like the use of a common language, a weapon in the hand both of the nationalist and of the imperialist. No advocate, however, seems to hold a brief for the racial purity of the Englishman; to the latter, political unity is the first and foremost constituent of nationality, and he does not concern himself greatly with ethnological or linguistic distinctions. In doing so he shows his recognition of the true basis of nationality. To illustrate by an example, he does not object to the teaching of Dutch in the schools of South Africa. Lord Cromer is probably right in thinking that through such a policy the language of the Boers will die a natural death. A bilingual administration will not of itself keep alive a decaying national spirit, and a nationalist demand for the forced use of a particular language or for the artificial revival of a dying tongue is bound to be futile. Intellectual barriers and frontiers do not of themselves make or maintain the individuality of a people, and of the desire for such England knows nothing. The result is seen in a language and a literature which are partly the cause and partly the effect of an assimilative type of character that has done much to mould the history of the modern world.

Writing in 1655, Howell, in his entertaining "Letters," says: "The English speech hath divers dialects, but her chief is the Scotie, which took footing beyond Tweed about the last conquest." The vocabulary of this dialect is no longer taught in the schools of Scotland, but many of the idioms still cling to teachers and pupils, and no organized effort has ever been made to alter the pronunciation. The result is that, though there is no longer an intellectual dividing line between England and Scotland, and though the countries use to a great extent a common tongue, language in Scotland (so far as the schools are concerned) remains a support of nationality almost solely through pronunciation. English is the medium of instruction; the teachers urge their pupils to speak it in classroom and playground; there is a growing use of English in the homes; and the boys in the street are not so ready to jeer at an "English" accent. Nevertheless, from the nationalist point of view, Scotland can still claim to have a spoken language of her own—the accent of the Scottish tongue still hangs upon Scottish lips, and ardent patriots are proud that it should do so.

It is an interesting question whether it might not be a good thing for Scotland if Scottish teachers would make more general effort to speak, and to induce their pupils to speak, English as it is spoken by a cultivated Englishman. Many Scots, after leaving school, take considerable pains to improve

their accent, and this they do from no motive that discredits either their patriotism or their independence. Much of their labour would be spared them if they were taught in schools where certain characteristic English sounds received more care and illustration. It may be urged that the attention now given to the study of phonetics foreshadows the attainment of a greater degree of assimilation between the tongues of the two peoples. This seems reasonable, but in practice the teaching of phonetics has sometimes tended to aggravate rather than to reduce differences. Schemes of phonetics specially prepared for Scottish students are apt to concentrate attention more surely upon sounds which the Englishman does not utter than upon those which the Scot is only too ready to utter. Rightly used, such schemes afford a useful basis for comparison, but they demand that the teacher should have more than a passing acquaintance with the speech of the Englishman. Yet the influences of travel, of summer schools, and of University life are not inconsiderable, and the Inspectors are quick to note and appreciate every endeavour to secure purity of English accent. In not a few of the best schools, some of them in remote districts, there are individual teachers who devote themselves assiduously to the eradication of peculiarities of utterance, and it may be claimed that in such schools all branches of English instruction benefit thereby.

As we have already said, the matter is one which really has no vital connexion with patriotism or national feeling. If Scottish nationality is still a living thing, it will not be maintained through an adherence to Scottish phonetics or the vogue of "kailyard" literature, but through the pervading memories of a people united by pride in great traditions and achievements. It may be true that a brogue or a burr is often more convincing than a pedigree, and a shibboleth may still serve as it did in the days of Jephthah. But it is not the vocabulary of Burns that makes him a national poet, and it is not without significance that hundreds of Scottish pupils now study Burns only as they find him in Palgrave's "Golden Treasury." This is certainly not the surest road to a true estimate of his importance in Scottish life and thought, but it serves at least to remind young Scots that he has a place of honour in English literature. It also emphasizes Sir John Struthers' advice to give more attention to points of contact between the two nations.

Archdeacon Cunningham has pointed out how the whole character of English literature has been influenced by the fact that Great Britain was the scene of the simultaneous rise of the two nationalities, and that, throughout the seventeenth century, with a brief interval, the island was governed as a dual monarchy. It is in such illuminating facts as this that the Scottish teacher finds the most valuable means of fostering an intelligent national pride—not in an undue attention to national legends and vocabularies and idioms. Lord Rosebery has defined patriotism as "the respect for and assertion of national character"; and national character is not dependent for its continuance upon either accent or vocabulary.

By the way, we note that in Ross's "Social Psychology" it is stated that, though Edinburgh is still a capital, the Scots are beginning to distrust Edinburgh judgments as "provincial." There is undoubtedly more than a grain of truth in this, and it may be accepted as a symptom of the gradual transformation of the old national spirit into something less exclusive, less "cock-sure," but none the less valuable and distinctive. Scottish nationalism, so far as it has any official recognition in the schools, is at bottom a beneficent movement making for consolidation and unification rather than disintegration or isolation. SCOTO-BRITANNIC.

THE L.C.C. offers, for 1912, 168 Trade Scholarships, most of them tenable for three years and giving free training, with a maintenance grant ranging from £6 to £15 a year. The only condition that seems open to criticism is the age limit. Thirteen, in some cases twelve, is surely too young an age for a boy to begin a trade apprenticeship.

JOTTINGS.

THE next meeting of the School Nature Study Union will be held on Wednesday, January 17, 1912, at the College of Preceptors, at 7.45 p.m. A lantern lecture will be given by Mr. H. E. Turner on "The Open Air School." Mr. T. S. Dymond, H.M.I., in the chair. All interested are cordially invited.

FROM White Paper (Cd. 5951) we glean some interesting statistics as to the salaries of teachers in the 813 grant-aided secondary schools. The average salary of a head master is £438, of an assistant master £168, of a head mistress £332, of an assistant mistress £123. In 20.6 per cent of these schools, the highest salary of an assistant is under £140; and in only 4.4 per cent. is it over £300, and only 4 out of 4,002 assistants receive £400 a year or over. Less than 1 per cent of the assistant masters is over 60 years of age. It should in fairness be noticed that these statistics do not include the prizes of the profession—masterships in the great public schools, yet they justify the conclusion drawn by the A.M.A. that very few men, unless they have substantial private means or have taken a vow of celibacy, are justified in taking up teaching as their life's work.

THE North of England Education Conference will be held this year at Newcastle-upon-Tyne, on the 5th and 6th inst. It will be opened by the President, Earl Grey, who will take the chair at the first discussion on a paper read by Sir Hugh Bell on "Education and Practical Life." Vice-Chancellor Sadler will read a paper on "Education and the State in relation to (1) Curriculum, (2) Finance, (3) The Division of Control as between the Central and Local Authority."

THE General Meeting of the Incorporated Association of Assistant Masters in Secondary Schools will be held at Merchant Taylors School, E.C., on January 5.

THE Annual General Meeting of the Historical Association will be held at Manchester University on January 11, 12, and 13. Prof. Muir will read a paper on "The Relation between History and Geography," and Prof. Boyd Dawkins will give an address on "Some Points in the Pre-History of Britain."

THE Classical Association holds its General Meeting at King's College, London, on January 8 and 9. The President for 1911, the Bishop of Lincoln, will deliver his address on the morning of the 8th. On the 8th there will be a conversazione in Mercers' Hall, Chancery, in which Prof. Gilbert Murray will discourse on "The Ritual of Dionysus and the Forms of Greek Tragedy."

At the Annual Meeting of the English Association, to be held at University College, Gower Street, on January 12, the President, Mr. A. C. Bradley, will deliver his address at 5.30 p.m. On January 13 there will be a Conference on "The Teaching of English Composition in Schools."

THE Annual General Meeting of the Modern Language Association will be held at the University of Birmingham, on January 4 and 5.

THE Annual Meeting of the Mathematical Association will be held at the London Day Training College, Southampton Row, on January 10. The President, Dr. E. W. Hobson, will deliver his address at 11 a.m.

THE Twenty-eighth Annual General Meeting of the Association of Assistant Mistresses in Public Secondary Schools will be held on January 13, at 10.30 a.m., at the Grey Coat Hospital.

THE Association of Public-School Science Masters will hold their General Meeting at the London Day Training College on January 10 and 11. The Presidential Address will be delivered at 11 a.m., Thursday, by Sir J. J. Thomson.

A CONFERENCE on "Speech and Voice Training" will be held in the Lecture Hall of Bedford College from January 15 to 20. Mr. Fuller Mailland, Mr. Alfred Lyttelton, Mrs. Woodhouse, Miss Elsie Fogarty, and many other distinguished authorities have promised their aid.

Mr. H. M. McKECHNIE, of Edinburgh, has been recommended

by the Publications Committee of the Manchester University for appointment as Secretary to the Committee at a salary of £300 a year. The office is newly created, and was rendered necessary by the actual and anticipated increase of work.

MISS ALEXANDRA FISHER, M.A. Lond., at present second mistress at the Birkenhead Municipal Secondary School for Girls, has been appointed Head Mistress of the new County Secondary School at East Dereham in Norfolk.

LONDON SCHOOLS MUSICAL AND DRAMATIC ASSOCIATION.—A lecture on "Interpretation in Song" will be given by Mr. Plunket Greene, with vocal illustrations by the lecturer, at the Guildhall School of Music, Victoria Embankment, E.C., by permission of the Music Committee of the Corporation of London, on Tuesday, January 16, at 8 o'clock, Mr. Landon Ronald in the chair.

THE JACQUES-DALCROZE RHYTHMIC GYMNASTICS.—It is proposed to invite M. Jacques-Dalcroze and six of his pupils to give demonstrations in London next March, and a fund is being formed to guarantee the undertaking against possible loss. M. Jacques-Dalcroze will derive no pecuniary advantage from the visit, which will be purely educative. Inquiries or subscriptions to the Guarantee Fund may be addressed to C. B. Ingham, Esq., Moira House, Eastbourne.

THE Westminster Epilogue to the "Phormio" might supply Dr. Rouse with another proof of the adaptability of Latin to the most modern of topical allusions. Geta (Mr. Barrington-Ward, who had carried off the palm as an actor) was a blackleg—"En nota bestiolae! crux est tibi nigrum." Nausistrata, a peeress, is hindered in her flight by a harem skirt—"Harum certe obstat pars inhima: praepediuntur crura vacillanti." Sophrona is kept at home by the Insurance Act—"Ni lambo et lambo ut figatur regis imago Hic, aegrotanti pensio nulla datur." Even proper names are not too hard nuts to crack. Who can mistake "Conventus Hortus, ferrata via Orientis et Austri, Deliciae Turcae, Petrus Pictor non Leonardus"?

THE TEACHING OF ARITHMETIC.

(Continued from page 802.)

II.

THE papers issued by the Board of Education which deal with the teaching of Arithmetic or elementary mathematics are: "The Teaching of Mathematics to Young Children," by Miss Irene Stephens, Lecturer in Mathematics at the House of Education, Ambleside; "The Teaching of Mathematics in London Public Elementary Schools," by Mr. P. B. Ballard, District Inspector of Schools under the L.C.C.; and "The Teaching of Elementary Mathematics in English Public Elementary Schools," by Mr. H. J. Spencer, Head Master of the Bloomfield Road Council School, Woolwich. The Board of Education accepts no responsibilities for the statements and opinions contained in the papers; but, besides forming part of a volume of the "Special Reports," the papers are to be presented to the International Congress of Mathematicians to be held at Cambridge in 1912. While the last two of the above-named papers are markedly sound in critical judgment and helpful in advice, the first paper seems to us an inadequate and even faulty and confused treatment of the subject.

According to Miss Stephens's scheme, young children pass with alarming rapidity to symbols and writing and have soon said good-bye to the concrete, which should be "discontinued as soon as possible." This is an ambiguous phrase, but it fills us with misgivings when, further on, we read: "Once the concrete has been passed, it is better not to go back to it for assistance." This can only mean that the dullards are to be left in the slough of despond, plunging about in abstract number, with no hope of escape; for how can they be rescued save by a return to the concrete?

We do not wonder that the writer thinks that "ability to work with pure number is undoubtedly a function of some minds only." Though Miss Stephens advocates the teaching

of one method of subtraction, and that the complementary method, yet she seems to use the method of decomposition, and says it is the method "most easily explained"; and, further on, we read that "the method of equal additions is eventually a more rapid way of working subtraction and is therefore worth attention." This is running with the hare and hunting with the hounds.

Her treatment of division is even more puzzling. Surely both kinds of division involve continuous subtraction; and the subject is further confused by the misleading use of the word "sharing" in quotation instead of in partition. Nor will the young teacher be encouraged by the statement that "some children may not be able to do" long division, "but it is worth trying." We wonder when it is worth trying, and for how long; and do the children who cannot do it never do it from the cradle to the grave? Our imagination becomes as excited as Maggie Tulliver's did over Tom's Latin exercises. Our own experience is that, if children really understood short division, long division presented no difficulty. Though we agree with Miss Stephens that the scheme to be found in "existing and well known text-books" is capable of improvement, yet we cannot say that Miss Stephens has contributed much to our enlightenment.

If we turn from this paper to those by Mr. Ballard and Mr. Spencer, we get much sage counsel that teachers will do well to take to heart. It is encouraging to note Mr. Ballard's conviction that there is steady improvement in the teaching of mathematics in elementary schools. He says: "There is everywhere to be found less example-grinding and more thinking." At the same time, he gives us some very sound criticism of present-day teaching. As to infant teaching, he notes that the ratio, or measuring idea, is inadequately represented, and that lessons on one number tend to become very tedious, and in general there is too often no motive for the various numerical exercises. Further than this, he raises the question whether there is "any ultimate gain to be derived from specific lessons in number given to children under seven years of age." His own growing conviction would obviously lead him to answer this question in the negative, and with this we agree most heartily.

As to teaching in the senior department, Mr. Ballard gives an interesting analysis of the subject-matter of arithmetic taught from an investigation of seventy London schools. Some of the results are startling: 24 per cent. still teach true discount, 16 per cent. cube root, 4 per cent. alone teach multiplication by use of the largest multiplier first, 20 per cent. teach both methods of multiplying, 40 per cent. teach L.C.M. and H.C.F. by the "column method" only. He very justly criticizes the placing of practical work after the theoretical work has been taken, and also condemns its frequent lack of purpose.

He still finds that fractions are taught mechanically, without even diagrammatic illustration. The reason for this is probably that though, by paper folding in the infant department, children do a small amount of practical work in fractions, in the senior department this is not continued. Dare we hint that the trouble involved in giving the practical work is shirked, and hence all the work on fractions tends to be taught mechanically, and diagrammatic illustration does not follow on naturally from the children's paper folding and dividing?

We quite agree that the "ratio" method of proportion should lead to the setting down the problem in the form of a simple equation to be solved, but then it must be recognized that this is a method for a fairly late stage of development, and that in the early stages only the more cumbersome but very simple unitary method can be used. On the whole, Mr. Ballard notices an increasing degree of intelligence in the children's work and no noteworthy falling off in accuracy. Practical work is much more common, and the examples are brought into close relation with the children's everyday life; though the work has no special commercial or industrial bias, this is left for the Central Schools. There is a tendency to use the last year for recapitulation and practical applications rather than to give time to work in stocks and shares, discount, &c. Many schools now include in their

syllabus the elements of geometry and algebra, though in the latter case the treatment is not at present very satisfactory.

Mr. Spencer does not sound quite such a hopeful note as Mr. Ballard. He says that, "notwithstanding great improvement during the last ten years, arithmetic in most of our schools is still laboriously rather than well taught." As one proof of this fact he refers to the reports of examiners for the Junior Scholarship. But we do not think these results need entirely condemn the teaching. An examination candidate often reverts to old and bad methods, and so, where examinations are imminent, we can quite believe that both teacher and pupil may often revert to mechanical methods, where normally both are working on better lines. The newer ways have not yet become sufficiently habitual, nor is the idea sufficiently established that quality more than apparent quantity is best appreciated by examiners. He notes as the main difficulties in the way of general reform: (1) the size of the classes; (2) the heavy school curriculum; (3) the pressure of clerical work on head and assistant teachers, which leaves no leisure for supervision and conference to ensure continuity of method; (4) co-ordination with other subjects is either misused or altogether neglected. And as to particular classroom teaching he finds: (1) a lack of use of the concrete; (2) the neglect of oral in favour of written work; (3) the neglect of the understanding of fundamental principles; (4) examples set are impractical and needlessly elaborate; (5) work with fractions, both vulgar and decimal, is unnecessarily delayed; (6) the children do not form the habit of making rough estimates; (7) graphical work has been overdone. With regard to co-ordination and graphical work we have already expressed our opinion; with the other points no one would probably disagree.

These, in brief, are Mr. Spencer's suggestions and criticisms, treated of course more fully and in detail in his paper. Of the illustrative syllabuses for the Infant and Senior Departments, we would only say that, while agreeing with the method of development, we are not hopeful of being able to cover the ground so quickly, but we should not greatly regret the omission of Standard VII arithmetic, and more than Standard VII practical geometry, thereby spreading the preceding work over a longer period of time.

If, then, we review the whole subject of the teaching of elementary mathematics in schools in the light of the monographs we have considered, and of practical experience, these seem to us the fundamental facts that emerge. In this subject there is often a serious lack of the continuity of method which is all essential; this is especially noticeable in the passage of children from the junior to the senior department. The only possible way to remedy this defect is to have more frequent consultation between teachers of both departments, and to have one teacher, not necessarily the head teacher, as general supervisor, responsible for the methods adopted throughout the school. This plan would be far better than the passive adoption of any syllabus imposed from without, however detailed it might be as to matter and method.

To make this practicable, all teachers must have more leisure time, and in particular the superintending teacher must be freed from some of his regular class work. This does not imply a system of specialist teachers; but it does involve the addition of at least one member to the staff. Secondly, it is probable that specified number work will be deferred till a later age in the future; but we do not anticipate that the same ground will be covered in the shorter period of time. No teacher probably, in his heart of hearts, now wishes to give work of an elaborate and useless nature, based often on mythical or obsolete transactions; but if we drop this work, and think it undesirable to do no mathematical work in the last year, how are we going to fill up this time?

Various courses are open to us. We may spend the time in working at really practical applications in close connexion with the children's life, as in the case quoted by Mr. Ballard. When girls are given a course of domestic arithmetic, we may do work in geometry, we may do work in algebra. Any or all

of these lines of development are open to us. Now no text-book is of much avail in the practical course. Teachers must suit the work to their particular children, and this involves a considerable expenditure of time, more than can at present be afforded, and yet the work is highly desirable. As to the geometry and algebra, it is probably best to leave this to the teacher superintending the mathematics of the school. About methods employed there is, and always will be, divergence of opinion on minor details, and this is immaterial if only throughout each separate school there is uniformity of method.

Thirdly, there is still a noticeable failure on the teacher's part to obtain a clear understanding of fundamental principles, and also a too early and final rejection of concrete work. This in the main arises from the fact that teachers do not understand the fundamental principles themselves and know very little of the psychology of number. Also, when all is said and done, the classes are too large to make teachers willing and able to attempt much practical concrete work. We have, however, reasonable hopes of reduced numbers in classes.

The first points raise the whole question of the training of the teacher. The intending teacher depends for his training on his own experience, on indirect instruction through books, or on direct oral instruction.

We shall not far overshoot the mark if we say that 90 per cent. of the ordinary run of people, who have a sufficient power over elementary mathematics to use them as an efficient instrument in ordinary life, have no notion of the fundamental principles underlying the various operations they perform with ease. Use of the instrument does not imply power to teach the use to others.

If students turn to text-books on the subject, they are not greatly assisted. On the whole, mathematicians are not psychologists, nor psychologists mathematicians. One or two text-books are helpful—often very good as far as they go, but insufficient; others of a more advanced nature are quite beyond the comprehension of the ordinary student.

It seems, then, that the student must depend chiefly on oral instruction in the training colleges, and that no satisfactory results can be obtained unless a considerable amount of time is given to the study of these fundamental principles during the training course. We may be said to be advocating a counsel of perfection—smaller classes, more leisure for teachers, longer training for students; but it is a counsel that must in the end prevail, if only because of the insistence of both teachers and inspectors. Meanwhile, any such publications as those of the London County Council and the Board of Education must help the cause of good teaching by giving sure guidance and by arousing fresh interest in the subject.

FRENCH BY THE DIRECT METHOD.

THE direct, or conversational, method of teaching French has been generally adopted in girls' public schools. By its use the pupil is said to acquire a conversational facility impossible under the old regime, when a knowledge of grammar, tested by exercises of a dull and stereotyped pattern, and the ability to translate from English into French, and *vice versa*, formed the standard of proficiency at which the teacher aimed. The pupil had a sound grammatical knowledge of the language, was able to read it in the original with more or less ease, but she could not speak it. To enable her to do so, her studies were either supplemented by the help of a French governess at home, or she went abroad for a year or more.

It was felt that this system was not altogether satisfactory on two grounds: first, that to enable the pupil to speak a living language should be every teacher's first aim; and, secondly, that a foreign language should be taught without the intervention of the English idiom.

The Direct Method was thereupon introduced, by means of which the pupil was taught in French from the beginning, and a host of manuals flooded the educational book-market. The new method was hailed with acclamation, and in many homes the services of the French governess were dispensed with as being no longer necessary. In a measure, it has been successful, and is so still, but only under circumstances so ideal as seldom to exist, and, taking one consideration with another, it seems doubtful whether the results are at all commensurate with the expectations.

Briefly, the case stands as follows:—The pupils speak on certain set subjects dealing chiefly with concrete objects. They spell badly because too large a proportion of time is spent in oral work and in avoiding, by various devices, the use of English, which would clear up some doubtful point in a moment. Free composition has taken the place of translation from English into French, and the results are sometimes startling. For instance: "Hockey est un joli jeu. Je aime il très beaucoup. Hier nous avons une allumette contre une autre école. Nous emportons par six goals à quatre." This passage is quoted from an essay of a girl of fourteen. Their grammatical knowledge is not sound, partly because comparatively little time is devoted to that most necessary branch and partly because exercises, except in a form so simplified as to require but little mental effort on the part of the pupil, are out of date. "Learning without tears"—that is, the maximum amount of work for the teacher and the minimum for the pupil—is still an ideal generally accepted. Nevertheless, "Non sine pulvere palma" is as true now as ever it was. Thus, the results of this method of teaching a language, admirable in itself, are distinctly disappointing. I will try to indicate some of the reasons why this is, from the nature of things, inevitable.

It will probably be admitted that if a girl is to acquire a real conversational facility in a foreign language she must have frequent opportunities of speaking herself and of hearing others talk who are proficient in it. It follows from this that the classes must be small in number and the lessons many. In the majority of girls' public schools neither of these essentials is, nor can be, observed. To carry them out properly and successfully a very large staff would be necessary, for the provision of which there are no available funds. Classes then are far too large, and the individual pupil has but little opportunity of speaking, and cannot, therefore, express herself with any real fluency and ease, nor understand readily. The teacher, because of the unwieldy size of her class, is obliged to confine herself to a stereotyped catechism of question and answer, which is showy, perhaps, but seems to me to have but little ultimate value and takes up an enormous amount of time. The lessons are more or less on these lines.

"Qu'est ce que c'est que ceci?" the teacher will ask, holding up a pen. "C'est une plume," the pupil or pupils will answer. Various other objects will be named in this way, and the words written up on the blackboard. The pupils, at the end of a lesson, will have learnt the names of a few concrete objects which could have been memorized in a few minutes from a book. No English word will have been spoken, it is true; but the pupils almost certainly have the English equivalent of the objects in their minds, and in any case there is no trace of the give-and-take of ordinary conversation, its range and shifting flight from one subject to another. The concrete is there, but how seldom does everyday talk deal with that?

The number of French lessons given in the average public girls' school is three or four a week. It is surely impossible for a child to learn to speak a foreign language well if she only has three or four lessons a week of thirty or forty minutes' duration each: lessons given, moreover, to a large number of pupils of whom she is only an unimportant unit. The teacher, unless the school is exceptionally well staffed and the classes carefully graded, has another great difficulty to face. Throughout the year, pupils new to the school are constantly being drafted into her classes, whose standard of French is different from the average. Whether they know more or less makes little difference, since it is essential to the successful use of the Direct Method that the scholars in each class should be prac-

tically at the same stage of learning. The sudden appearance of a genius or an ignoramus is equally disconcerting.

There is another consideration, too, to be taken into account, and one which is largely ignored. The French language, *per se*, has not the smallest interest for the average child. He does not wish to speak it, still less to pronounce it in any but the most British way, and he has the most whole-hearted contempt for foreigners, their ways, and their language. The teacher has to overcome these insular prejudices of youth and awaken an intelligent and appreciative interest in a study of something intrinsically dull, and to which a considerable amount of drudgery and hard work is attached. She must, if she is to keep the attention of her class and make them ready and anxious to do their share of the work themselves, possess a lively imagination, much originality and force of character, inexhaustible vitality, and that most rare and precious of the teacher's gifts—personal magnetism. Thus richly endowed, she may and does obtain excellent results from the use of the Direct Method of instruction in spite of the difficulties with which she has to contend, but it is idle to say that these gifts are the common prerogative of every teacher. They are not, and, if Nature has denied them, the most perfect system of training in the world cannot bestow them.

Inspectors—men, for the most part, with no great knowledge of French—are apt to complicate matters, though with the best intentions, no doubt. For instance, a teacher who was anxious to dissociate French entirely from English in the minds of her pupils, had, with the consent of one Inspector, abolished the translation of French into English. The pupils read various books without translating, and were questioned in French to see whether they had understood the meaning. The following year another Inspector, a great believer, so he said, in the Direct Method, visited the school. He disapproved and insisted on the reinstatement of translation, because he considered it a valuable help in the study of English! So no doubt it is, but what becomes of the Direct Method, the main object of which is to teach French independently of English?

To this well meant effort to give pupils conversational proficiency in French—an effort, so it seems to me, doomed almost inevitably, under the existing circumstances, to failure, or attended at the most by a qualified measure of success—a very definite and valuable educational asset—culture—tends to be sacrificed. It is quite possible for a good teacher, with sufficient time at her disposal, to inspire her pupils, be the class large or small, with a genuine love for, and appreciation of, French literature, of a prose, almost unsurpassable, I suppose, for beauty of style and clearness of thought and expression. To be able to read the works of the great French writers in the original without the aid of a dictionary is surely of more real educational value to the pupil than for her to be able to make a certain number of remarks in French within very set and circumscribed limits. But the conversational fetish precludes much time being given to a study of books in a literary sense. Grammar, with its training in accuracy, is, as I have already said, elbowed out of the way for the same reason. Such snares, for instance, to the English child, as the use of the subjunctive mood—that revelation of the subtle French mind—are always spread before the feet of the victim of the Direct Method in its undiluted form. She constantly falls into them, but that troubles her not at all. "Where ignorance is bliss," &c.; but we may not truthfully say that a girl can speak a language who knows little or nothing of its characteristic idiom and spirit.

We may therefore come, not unjustly, to this conclusion. The Direct Method of teaching French in the hands of a highly efficient teacher, and under suitable conditions, has much to commend it. These conditions, however, so seldom exist in reality, that one is inclined to the belief that it would be more to the advantage of the pupil to give her a sound grammatical and literary knowledge of the language than a so-called conversational ability which means, more often than not, an unidiomatic literal translation of English

into French. The former makes at least a solid foundation upon which real culture can be built, so badly needed in this commercially minded age. The latter is a bubble pricked by the first French person the pupil comes across, who is, as a rule, quite unable to understand the "Stratford-atte-Bowe" version of his own language, served up for his delectation.

HELEN HAMILTON.

A GIPSY SCHOOL.

By SYDNEY WALTON.

SUMMER is ended. Our gipsy school must needs fold its tents and live in blinding walls of masonry the winter through. I know not how we shall endure it after the sweetness of the morning dew and the song of the seashore. Bricks and mortar will be a bandage about our eyes. The soul will cry out for light and air. It is easy to understand now why the wisest of all teachers forsook the dusty synagogue and sought instead the boat on the beach.

"Lavengro" would have been glad at heart in our company; so, too, Matthew Arnold's "Scholar Gipsy," whose mystic presence still haunts our heaths. Of course, we were not real gipsies, only make-believe ones; but their creed was ours, their eyes of wonder for sun and sea. "There's a wind on the heath, brother," we would call with like rapture as the breeze beat upon our tanned faces.

Our "Head" is a son of the country—thanks for that. It means much in the heart of a city, in a school built in semblance of a warehouse. (The day is coming when Education Authorities will require candidates to answer on official forms: "How long have you lived in the country?" Masters must know the language of Arcady or they may never reach the wonder-souls of their scholars.) The "Head" explained to us, in a private meeting at his home, his longing for the boys to see the country, to live in it for days together, until their spirits awoke within them. Then might they understand the literature they read from afar, as it seemed to him, so that the words were dim. He proposed, in brief, a school camp. It would mean the sacrifice of a goodly portion of the long vacation. Were we willing to pay so costly a price? An enthusiastic "Yes" went round.

Straightway we addressed ourselves to details multitudinous. To rusticate a school is not so easy a task as it may sound. Manna does not rain down, as in ancient days. The modern Moses must get into touch with local butchers and farmers, setting a face of flint against high charges. Most of our boys are poor, and it is the poor, the unprivileged in these matters, that we wanted with us. The Head Master travelled in North Wales, and found at Foryd an ideal acre or two. At prayers next morning he spoke of this new playground, set amid mountains and mere. A boisterous burst of voices responded to his challenge: "Shall we go?" I believe the boys marched with discontent to their classrooms of brick and mortar.

Strict economics (we spent hours over the problem, exacting the best terms from the railway companies; the Great Western took us from the Midlands and back for 5s. a boy) allowed us to announce 30s. as the total cost per head. It was a triumph of finance, when you consider, as we had reason to remember afterwards, that a boy's appetite doubles itself under the encouragement of country air, and that our tables, though plain, tottered with plenty. The Welsh lamb, by the way, we can never forget; it left the bones as if it were silk.

Our first difficulties were with the parents. Day schools have these hindrances—the mothers being of a most stubborn order—and must, I suppose, endure them. When we adopted the "Rugger" code lengths of written protest reached the Head Master's letter-box—and paper basket. We seem to have won the confidence of home, judging from the number of sons

committed to our care, though all we could offer was a sanctuary of canvas. The "Head" whispered to us his secret joy at having the boys sequestered for many a Spartan day from the fondlings of indulgent parents. One of the sights of camp is the gladness with which the young rebels had their emancipation. Dress, for example, is optional in our gipsy school. And, if it be not too dangerous an epigram for a schoolmaster to use, it is the naked children he wants—not for his cane, but that his heart may have its will. I shall recall young Caldred, a spoiled child, every bit of the true boy petted out of him at home. He turned gipsy with us. We found in him a savage, delightful, winsomely wild.

A picturesque encampment awaited us at Foryd. "Encamped" is too threadbare a word to use in description of the journey down. New wine needs new wineskins. These boys feasted on beauty of landscape. I began to wish I were a boy again—to see Nature for the first time without the dust of the poets about the eyes. Three masters and two Army cooks formed the pioneer party. They raised tents, dug latrines, and made ready, in fact, our flimsy household on the beach. The history specialist, an Oxford man, gave us much amusement. He looked a navy every inch of him, save that the inches were few. His hands were red and blistered with energetic digging; and, soap having been forgotten from the pioneers' baggage, the finger-prints of yesterday were still upon him. But he was loud in praise of the spade for cutting away the cobwebs of term.

The first night was a tempest. Our real responsibility as proxy-parents fell heavily upon us. A wind sprang up, grew into passion, and whipped the tents with violent outbursts of fury. The pioneers trembled for their handiwork. We made hurried arrangements with a Welsh farmer (a hospitable old soul, though he charged us far too high for eggs) to have his hearth and his barns for the night if the canvas roofs gave way. Meanwhile, we went the round with our lanterns and kept vigil far into the night. One scene—so sweet it was!—I shall never forget. Mrs. Browning speaks somewhere of children's chambers which "the thunders cannot break." Scarcely sleeping in one storm-drunken tent were six of the youngest boys—babies of camp. To our challenge: "Is all right?" they returned no answer save a pleasant breathing.

Reveille was at six. The winds were at a whisper, and the boys dart out for a morning bathe and a gambol along the beach. They rejoice in the water stretched out before them in blue mystery. By some caprice of Nature, boys loathe to wash, but love to bathe. Tents are to be put tidy for inspection before breakfast. One of the masters goes the round. A pleasant rivalry grows up among the groups. Tidiness, first an ambition, becomes a habit. I claim that it is a habit which enriches a boy's work in school—slovenliness, whether of thought or word, being one of the evils of the present generation.

Prayers before breakfast—in the open, of course, amid the music of things. After breakfast, chats with the "doc," for personal hygiene must be taught in our gipsy school, the latest rostrum in the world for such preaching. We grow intimate with our boys, tell them how to hold the body in reverent restraint. Then, rambles, Nature study, mountaineering, "sunburnt mirth," picnics, revelry in the playrooms of Nature, a gipsy programme, in fact, and such as may cause a boy to find his lost legacy.

The boys develop amazingly—I mean in the sense of an awakening soul. I think of Richards Major. He had an ill name in school, but a grand reputation as a gipsy. Back in the classrooms, amid the chalk dust that makes us see things, we carry visions of the boys as they were on the beach. These visions are Hope's keepsakes. When supper comes, and the boys have stolen to their tents, we—their fathers and lovers, too—sit in the "Head's" quarters and discuss our charges and our ideals. We have found it worth while to have a gipsy school, for we believe it is better than the school dreamed of by architect. It is the original school in which the boy-man first learned the lessons of the world.

GIFT BOOKS.

The Air Scout. By HERBERT STRANG. (6s. Henry Frowde and Hodder & Stoughton.)—Mr. Strang has anticipated the events of the past few weeks in providing the ground work for this excellent story. He has imagined the growth of Chinese power under a republic, and its possible effect on world politics. The Chinese make a sudden descent upon Australia, planned secretly and well developed up to a certain point. All depends, however, on the President of the Republic, and when he is captured no one is found to carry on his work and the invasion fails. Noble and Cullendar, two cousins, who are expert airmen, give very valuable help to the Australians in repelling the invaders, and in the course of their work with the Australian army go through many exciting adventures. Mr. Strang has made good use of the contrast between Eastern and Western minds, and has written an excellent boy's book. The illustrations by W. R. S. Stott are above the average in merit.

The Hero of Panama. By Captain F. S. BRERETON. (6s. Blackie.)—This is the story of an American boy, Jim Partington, who is left with little money to look after a young sister. He saves the life of a man who has influence on the Panama canal works, and by this means gets good employment. He soon justifies his selection by his energy and cleverness. In fact he is largely responsible for the capture of a band of thieves who are doing much damage to the canal workers, and he also prevents a terrible collision on the railway. The account of the pursuit and capture of the thieves is well written, and the characters of Jim's faithful servants, a negro and a Chinaman, are vividly drawn. The hero is a trifle too heroic for our liking, and the opportunities for the display of his courage and address are piled on too thick, but the book is eminently readable. It is well illustrated in colour by William Rainey, R.I.

Famous Sea Fights from Salamis to Tsu-Shima. By JOHN RICHARD HALE. (6s net. Methuen.)—Of the fourteen Famous Sea Fights here described in considerable detail, we would wager that the average Sixth Form boy would be unable to tell in what century, and between whom, more than five were fought; yet, if all the fourteen are not of historical importance like Creasy's "Decisive Battles," all deserve the epithet of "famous." It is a book rather for the professional than the lay boy, and, with the clear plans of all the modern battles, might well serve as a class book at Osborne or Dartmouth. One lesson enforced is that the men behind the guns are no less an important factor than in the days of wooden walls. On one small point we must express our dissent from the author. He holds that a trireme was a vessel with three men to each oar. Monuments and the very names of the three sets of rowers refute this hypothesis, and Dr. Warre cannot be dismissed as a classical scholar who knows about boats and rowing only from books.

The Romance of Aeronautics. By CHARLES G. TURNER. (5s. Seeley.)—Mr. Turner is himself a highflyer, and he gives us here the latest up-to-date romance after a preliminary chat on the aerologers (to coin a corresponding word to "astrologers"). We begin with the Montgolfiers and end with a photograph of General Cartier's camp taken from an aeroplane during the Mexican troubles of last spring. It is a fascinating record of the triumph of science and of adventure in a new element.

Lives of Great Men told by Great Men. Edited by RICHARD WILSON. (6s net. Nelson.)—The editor would find it hard to frame a definition of "great" wide enough to cover the subjects and authors of these twenty-three Lives. Much as we may love and admire them, "great" is not the epithet one would naturally apply to Oliver Goldsmith or to Charles Lamb. James Watt and George Stephenson were both undoubtedly in their way "great men," but their biographer, Dr. Samuel Smiles, was nothing but a respectable maker of books. But though he has not justified his title, Mr. Wilson has compiled a very readable collection of biographical sketches taken mostly from volumes outside the purview of the schoolboy, which the publishers have rendered more attractive by well chosen coloured illustrations.

Lives of the Fur Folk. By M. D. HAVILLAND. (5s net. Longmans.)—Let us make a clean breast of it. This is one of last year's gift books, and the only amends that a dilatory reviewer can make is to pronounce that it is of its kind better than any of this season's gift books. Redbad the Fox, Fluff Button the Rabbit, Grimalkin the Cat, and Stubbs the Badger are all personalities endowed with human passions no less than the characters in "Reineke Fuchs," but, unlike those in the Beast Epic, they are no less true to natural history. Add to this that the English style is ornate and rhythmic, but never affected or precious, and that E. Caldwell in the illustrations and insets has well caught the spirit of the author.

The Great White North. By HELEN S. WRIGHT. (10s 6d net. Macmillan.)—Miss Wright has given here briefly and in a

popular form the history of Arctic discovery which Dr. Nansen expounded at length in his monumental work that we noticed last month. Early discoveries and adventures, from Pytheas down to the Phipps expedition in which Nelson took part, are dispatched in twenty-eight pages. The author follows closely her authorities, paraphrasing or giving the *ipsissima verba*. We could have spared the concluding heroics. Admiral Peary needs no "diamond chalice to quaff the limpid draught" to celebrate the planting of Old Glory on the Pole. The subject does not lend itself to illustration, but the frontispiece is a capital likeness of Commander Peary, and there are several other good portraits in the volume.

The Roll Call of Honour. By A. T. QUILLER-COUCH. (6s. net. Nelson.)—The introduction at once differentiates this from the hardy annual of the book maker. The nine lives here recorded have not been taken at random, but carefully selected to illustrate and enforce Sir Arthur Quiller-Couch's idea of heroism. He has not forgotten his Aristotle, and after the manner of the Ethics he finds the five distinctive marks of the hero to be self-devotion, continuous and sustained, deliberate and conscious of its purpose, its object an idea, not a person or a group of persons, and lastly it must produce noteworthy results. This bare enumeration will probably leave the impression that Sir Arthur has bowed in the House of Rimmon and worships Success, but he is careful to guard himself against this misinterpretation. We are ready to pass all his nine heroes, Bolivar included, and the two or three more, including Tolstoy, whom he hopes to add to the roll, but we may fairly question whether the roll will be then complete. A comparison with Carlyle's "Heroes" is inevitable, and we note at once the difference that here the poet and the thinker (with the possible exception of Pasteur) find no place. All nine are men of action. We may on this score quarrel with the choice, but for the treatment we have nothing but praise. The stories told were nearly all familiar to us, but we re-read them with new delight as retold by a master hand.

Ocean Warriors: Famous Sea Fights recounted by Famous Men. (2s. 6d. Nelson.)—The title must not be taken too literally. The fights are some at sea and some on shore, partly historical and in part romance. They include Anna Gurney (who merited a better bard than Joanna Baillie), Addison's "Frozen Voices," and Poe's "Descent into the Maelstrom." The ingredients are good, but we cannot approve the admixture.

John, the Companion of Jesus. By ROBERT BIRD. (5s. Nelson.)—"The apostle John is presented in a new light as a fellow countryman who believed in Jesus. . . . The story is told in realistic pictures giving form and colour as with a brush." This may be only the humility that apes pride; but Mr. Bird would have been better advised to leave it to his readers and critics to discover for themselves his originality and power of word-painting. When he adds that John in his message to the young lived close to the heart of a little child, he is on safer ground; and though the book is neither original nor learned, yet we can endorse his claim to have told the story in a way which will commend itself to the young. They should be cautioned, however, not to trust the author as a historian. The chapters on Britain, hung on the slender thread that John may have visited London, had better be omitted, and one sentence will suffice to show the limits of Mr. Bird's classical attainments: "When Cicero the poet, whose verses are read in our schools, was banished from Rome to Thessalonica, two hundred years before the time of John," &c.

The Oxford Book of German Verse. From the Twelfth to the Twentieth Century. Edited by H. G. FIEDLER. (6s. net; India paper, 7s. 6d. net. Clarendon Press.)—English and French anthologies are plentiful as blackberries, but German anthologies of English provenance are black swans, and we have had none on the same scale since Buchheim's "Deutsche Lyrik." In the quarter of a century that has elapsed new poets have arisen, and it is no reflection on Dr. Buchheim to say that we have to-day a truer appreciation of German poetry. Prof. Fiedler's selection is wholly independent. It is a coincidence that the number of poets represented in the two anthologies is almost identical, but of Prof. Fiedler's century, forty-three names are not to be found in Buchheim. Verse is here synonymous with "Lyrik," and with one exception (the apologue of the rings from "Nathan der Weise") all the poems here are lyrical, but the range of time is wider, and the specimens of the Minnesingers translated into modern German and *Volkslieder* of the fifteenth and sixteenth centuries are a new and pleasing feature. There are few lyrics that we could spare, though, as is inevitable, many of our favourites are missing. Goethe and Schiller occupy one-sixth of the whole, a goodly share, yet we miss any specimen of Goethe's Roman Elegies, the Venetian Epigrams and the Sonnets, and the most perfect of all Schiller's

(Continued on page 30.)

METHUEN'S NEW BOOKS

A FIRST YEAR PHYSICAL CHEMISTRY.

By T. P. HILDITCH, D.Sc. Lond., F.I.C. Crown 8vo, 2s. [Text-books of Science.]

An attempt to render this branch of chemistry more easy to those commencing its study. The more elementary outlines of the subject are treated, as far as possible, from the standpoint of practical use in solving chemical problems; accordingly, the first part of the book is devoted to characteristic properties, such as density or refractivity. Later chapters include introductions to the physico-chemical theories of gases and of solutions, and the more important applications of these theories to pure chemistry. The book should prove useful to Inter B.Sc. and Final (Pass) B.Sc. candidates, as well as those taking Board of Education examinations.

PHYSICO-CHEMICAL CALCULATIONS.

By JOSEPH KNOX, D.Sc., Lecturer on Inorganic Chemistry, Aberdeen University. Crown 8vo, 2s. 6d. [Text-books of Science.]

This book is intended for students of physical chemistry, as a supplement to the theoretical matter of lectures and text-books. Here the theory is applied to the solution of practical problems. The book contains eleven chapters, dealing with the main subdivisions of physical chemistry. Each chapter consists of a short introduction dealing with the theory required for the solution of the problems, a series of typical problems with complete solutions, and a list of problems for solution with answers. Practically all the problems have been taken from the original literature of the subject, and by a careful study of the solved problems the student should learn much. The large collection of problems for solution should prove useful to teachers.

A TEXT-BOOK OF PRACTICAL CHEMISTRY FOR TECHNICAL INSTITUTES.

By A. E. DUNSTAN, D.Sc., and F. B. T. THOLE, B.Sc., Lecturer in Organic Chemistry, East Ham Technical College. Crown 8vo, 3s. 6d. [Text-books of Science.]

This Course of Practical Chemistry meets the requirements of the Upper Forms of Secondary Schools, where a good elementary foundation has been laid in the rudiments of manipulation. The book will be found useful also for classes in Technical Institutes, and covers the following ground:—

Qualitative Analysis of Simple Substances and of Mixtures—Volumetric Analysis—Simple Gravimetric Analysis—Preparation of Pure Compounds—More Difficult Quantitative Analysis—Qualitative Organic Analysis—Ultimate Organic Analysis—General Organic Determinations—Determination of Physical Constants.

A TEXT-BOOK OF INORGANIC CHEMISTRY.

By G. SENTER, D.Sc., Ph.D., Lecturer at St. Mary's Hospital Medical School. Author of "Outlines of Physical Chemistry." With many Diagrams. Crown 8vo, 6s. 6d. [Text-books of Science.]

The book is designed as a general introduction to the study of Inorganic Chemistry. It is written throughout from the modern standpoint, so that the student who has worked through it should be in a position to profit from the reading of original papers, and to proceed without difficulty to the study of advanced works on the different branches of the subject. The theoretical part of the subject is distributed throughout the book, and as far as possible the position on which the theories and hypotheses are based are given before the statement of the theories themselves. The great importance to the student of learning to draw a clear distinction between facts and theories is kept in mind throughout. The book is suitable for the Intermediate and Pass B.Sc. University Examinations and other examinations of similar scope.

ENGLISH COMPOSITION.

By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 1s. 6d.

This work is intended for pupils of Secondary Schools and private students. It supplies a progressive course in English composition, embracing not only essays and letters, but also other important and useful work in writing English. Numerous and varied exercises are appended to each chapter, while questions and shorter exercises, many of which may be used orally, are introduced in the text. The importance of connecting the student's composition with his reading has been borne in mind throughout.

ENGLISH COMPOSITION FROM MODELS.

By C. ROONEY, B.A., LL.B. Crown 8vo, 2s. 6d.

This book is an attempt to apply the Direct Method to the teaching of English composition. The models range from Bacon to Stevenson, and the extracts, which have been carefully selected, are calculated to interest senior students. Emphasis is laid on the fact that to write we must read, and that to read with profit we must be interested. "All literary skill is based upon imitation." The book deals in an interesting way with certain inherent difficulties, and has useful hints as to how the literary taste of young people may be developed and guided. It is the work of a practical teacher.

STORIES FROM CHAUCER.

By ADA HALES, Oxford Honours School of English Language and Literature. Crown 8vo, 1s. 6d. [Stories from the Great Writers.]

In these tales an effort has been made to prepare the young reader for the enjoyment of the original by keeping very close to the actual language and preserving the atmosphere of Chaucer himself.

STORIES FROM OLD ENGLISH ROMANCE.

By JOYCE POLLARD. Crown 8vo, 1s. 6d. [Stories from Old Romance.]

These stories are taken partly from the very beginnings of English literature; partly from the best pieces of the thirteenth, fourteenth, and fifteenth centuries. They have been transcribed directly from their originals, and are full of the colour, picturesqueness, and spirit of adventure in which our older literature abounds.

HEALTH READINGS FOR ELEMENTARY SCHOOLS.

By C. J. THOMAS, M.B., B.Sc., D.P.H., University Scholar in Medicine, Member of the Examining Board of the Royal Sanitary Institute. Crown 8vo, 1s. 6d.

This volume is written in accordance with the recommendations of the Board of Education. It treats the subject in a simple way as a part of Nature Study, and deals with questions of health from the point of view of the natural interests of the child in his surroundings.

DOUBLE ENTRY BOOK-KEEPING.

A Complete Treatise on its Theory and Practice. By JAMES CUSACK, LL.D., Principal of the Business Training College, Finsbury Square. Crown 8vo, 3s. 6d.

Covers the requirements for all the Elementary, Junior, and Intermediate Examinations held by the London Chamber of Commerce, the Royal Society of Arts, the National Union of Teachers, the Oxford and Cambridge Senior Locals, the College of Preceptors, and other similar Examinations.

lyrics, "Thekla's Song." The preface promises us an admixture of grave and gay, and there is no lack of *das heitere*, but we should have liked further specimens of satire and humour. Of Heine, for instance, we have (except in "Mein Kind, wir waren Kinder") only the sentimental side. Of the format it is enough to note that the book comes from the Clarendon Press. The year has produced no daintier gift book.

Walter Raleigh. By JOHN BUCHAN. (3s. 6d. Nelson.)—Mr. Buchan has mastered the secret of the story-teller; he can make old things new. There is hardly a triter story in English history than that of Walter Raleigh. No less trite to an Athenian audience was the tale of Pelops' line, when Aeschylus wrote the "Agamemnon." In this case the narrative is revived by making the narrators of the leading scenes eye-witnesses. Nathan Stubbs, the old sea-dog, is as much alive as Sir Walter. The double-page illustrations, by Mr. Gabriel Gifford, are bold in outline and effective—the blast of tobacco smoke (Chapter VII) is volcanic.

Famous Modern Battles. By Captain ATTERIDGE. (5s. net. Nelson.)—These twelve battles, of which the Alma is the first and Mukden the last, have been described in the evanescent pages of the War Correspondent and the monographs of military attachés, but here, mostly for the first time, we have popular descriptions written by an expert. By help of careful plans the layman, or even the intelligent schoolboy, can follow the course of each battle and gather the lesson to be gleaned from it. He will find, too, no lack of the romance of war, forlorn hopes, dyings in the last ditch, and deeds of individual heroism.

The Nameless Prince. By G. I. WITHAM. (2s. 6d. Blackie.)—The story of a descendant of King Henry II, who is brought up in ignorance of the fact that he come of the royal line. His pride and vanity have been fostered by his upbringing, and, when at last he is given a knightly duty to fulfil, he thinks only of his own advancement and neglects his trust. He has a rough awakening and rough schooling, but in the end proves worthy of his race.

The Romance of Australia. Edited by HERBERT STRANG. (6s. Henry Frowde and Hodder & Stoughton.)—These records of early voyages and explorers, beginning with Columbus, Vespucci, and the Cabots, and coming down to adventures in the bush in 1851, are full of interest and well sustain their claim of being as stirring as any in our military and naval annals. The daring, perseverance under hardship, and heroic endurance of suffering here

described cannot fail to enthral all who read. There are several coloured illustrations.

In Northern Mists. By FRIDTJOF NANSEN. Translated by ARTHUR G. CHATER. Illustrated. 2 vols. (30s. net. Heinemann.)—A full history from original sources of Arctic exploration from Pytheas down to Costa-Real. Hitherto the greatness of Dr. Nansen as an explorer has eclipsed his greatness as a professor of geography.

King Arthur's Knights: The Tales retold for Boys and Girls. By HENRY GILBERT. With 16 Illustrations in Colour by WALTER CRANE. (7s. 6d. net. Jack.)—Thirteen tales from the "Morte d'Arthur" and the "Mabinogion." Mr. Crane is an admirable colourist and he has caught the glamour, if not the delight of battle, of Arthurian legend.

EDUCATION IN THE PERIODICAL PRESS.

Agricultural Education in the University and the School. *Nature*, November 23.

Deals with Agricultural Education: Report of a Deputation appointed by the Council of University College, Reading, to visit selected centres of Agricultural Education and Research in Canada and the United States. Memorandum on the Principles and Methods of Rural Education. (Board of Education, 1911.)

DUSTLESS SCHOOLS

For the Anhydrous, economic and effective LAYING of DUST and DIRT not only during each Sweeping, but also throughout all the intervening periods — which is of greater hygienic importance — the Unequalled ODOURLESS, or POWERFUL GERMICIDAL

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

On all School, Laboratory, &c., Floors and Linoleums of every description
In Schools — **EARLY** in the **XMAS VACATION** for best results.

NOT MORE THAN THREE TIMES A YEAR, as each application lays the dust and dirt for two to twelve months, according to wear. It costs little, and is easily applied. Not sticky—the dust, &c., absorb the "Florigene" from the impregnated floors and become "weighted." The ordinary daily dry sweeping alone required to clean during each term, without sprinkling of any kind.

"Florigene" is an aid to the prevention of throat and other diseases, and has been awarded the BRONZE MEDAL of the ROYAL SANITARY INSTITUTE.

Two well-known SCHOOL MEDICAL OFFICERS have jointly reported on the advantages of "Florigene"—as the result of bacteriological experiments in four departments—as follows:—

1. Economy of labour in cleaning the room.

2. Prevention of the rising of dust once deposited; hence a healthier atmosphere for breathing.

They also favour its more general adoption, especially in rooms where drill is carried out.

"Florigene" is also strongly recommended by many other high authorities.

"Florigene" has been used for many years on the floors of The Royal Naval Colleges, H.M. Science and Art and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, Libraries, Museums, Offices, &c., throughout the United Kingdom and Colonies with approval.

Utopia as a System. Schools and Scholars. By A. S. D. *Morning Post*, December 1.

"It does not really matter whether your children are drawn from a Sussex village or a Liverpool slum; heredity and home environment count for little, or at least they cannot counteract the work of a teacher of genius to any appreciable extent. But the school must be small enough to permit the single influence to penetrate it thoroughly, and it must contain under its single roof children of all ages. For it is very easy for one teacher to efface the impression made by another. That is why Utopia was discovered in a small rural school."

By FRANCIS STORR, B.A. Camb., Officier d'Académie,

Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board;

Examiner to: Oxford and Cambridge Joint Board, Cambridge Higher Locals,

Scottish Education Department, Civil Service Commission,

University of London, &c., &c.

EIGHTH EDITION. With Supplementary Easier Exercises. Fcap. 8vo, cloth, interleaved. Price One Shilling.

HINTS ON FRENCH SYNTAX.

[May be used with advantage with **any** French Grammar.]

"A capital little book, which we have no hesitation in recommending to French Students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for Schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

COLLEGE FOR PHYSICAL EDUCATION.**MEN STUDENTS.**

THE LONDON
Central Institute for
Swedish Gymnastics,

16, 17, & 18 Paddington Street, Marylebone,
LONDON, W.

Principal: ALLAN BROMAN,

From the Royal Central Institute of Gymnastics, Stockholm.

The course of study will be of one and two years' duration, will be carried on in accordance with the principles of the Swedish system of Gymnastics, and will conform to the requirements of the Board of Education. **Now Open.**

For further particulars apply to the SECRETARY.
Telephone: 872 Mayfair.

**BACON'S
EXCELSIOR CONTOUR
MAPS.**

Size 5 ft. by 4 ft. Price **16/-** each, unless otherwise quoted.

NEW BOOKS ISSUED DURING THE YEAR 1911

BY THE

University Tutorial Press

RELIGIOUS KNOWLEDGE.

Gospel of St. Matthew. Edited by Rev. T. WALKER, M.A., Late Sub-Warden and Lecturer of St. Augustine's College, Canterbury, and J. W. M. SHUCKER, M.A., Head Master of Newport Grammar School, Salop. 1s. 6d.

Acts of the Apostles. Ch. 13-28. By Rev. W. H. FERRAR, M.A., D.C.L., Head Master of Dean Close School, Cheltenham. 1s. 6d.

These editions are provided with Introduction and Notes, and are intended for the use of school pupils studying for public examinations such as the Cambridge Senior and Junior Locals.

ENGLISH LANGUAGE AND LITERATURE.

Senior Course of English Composition. By F. W. EDWARDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s. 6d.
Specially written for the Cambridge Senior Local Examination.

English Literature of the Nineteenth Century. By H. CLAY, B.A., and A. J. WYATT, M.A. 2s.

History of English Literature from 1579 A.D. By A. J. WYATT, M.A. 2s. A portion of *The Tutorial History of English Literature* specially issued for the Cambridge Senior Local Examination.

HISTORY AND GEOGRAPHY.

School History of England. By M. E. CARTER, Headmaster of Modern History, Oxford. 3s. 6d. In Three Parts (to 1603; 1603-1714; 1714-1910). 1s. 6d. each part.

Barlier History of England (to 1485). By C. S. FEARNSIDE, M.A. 2s. 6d.

Modern History of England. Part I, 1485-1714. Part II, 1714-1901. By C. S. FEARNSIDE, M.A. 2s. 6d. each part.

Earlier History of England, with the two parts of *Modern History*, are available in one volume under the title *Tutorial History of England*.

A Preliminary Geography of England and Wales. By ERNEST YOUNG, B.Sc. 1s. For Junior Forms.

Senior Geography, 1912. By G. C. FRY, M.Sc., F.I.C. 2s. 6d. This consists of portions of the author's *Text Book of Geography* issued separately for the Cambridge Senior Local Examination, 1912.

FRENCH AND LATIN.

Groundwork of French Composition. By FRED ERNEST WEEKLEY, M.A. 2s.

Senior French Course. By Prof. ERNEST WEEKLEY, M.A., and C. GREEN, B.A. 3s. 6d.
Specially adapted from *The Matriculation French Course* for the Cambridge Senior Local Examination.

Senior French Unseens. By L. J. GARDINER, M.A. 1s.
Specially prepared for the Cambridge Senior Local Examination.

Senior French Reader. By R. F. JAMES, B.A., French Master at Wellington Grammar School. 2s. 6d.
Specially written for the Cambridge Senior Local Examination.

Senior Latin Course. By A. J. F. COLLINS, M.A., and A. ROBINSON, B.A. 3s. 6d.
Specially written for the Cambridge Senior Local Examination.

Higher Latin Composition. By A. H. ALLCROFT, M.A., and A. J. F. COLLINS, M.A. 3s. 6d.
This work serves as an introduction to the writing of continuous Latin prose.

SCIENCE.

Practical Botany. By F. CAVERS, D.Sc., F.L.S. 4s. 6d.
A practical text-book in which prominence is given to the physiological side of botany.

Introductory Course of Mechanics and Physics. By W. M. HUTTON, M.A., M.Sc., F.I.C., and A. MATHIAS. 1s. 6d.

Text-Book of Heat, Theoretical and Practical. By R. W. STEWART, D.Sc., and J. SALTERLY, D.Sc., M.A. 4s. 6d.
A text-book of University Intermediate standard.

University Tutorial Press, Ltd.,
DRURY LANE, LONDON, W.C.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

NOTES ON EDUCATION IN 1911.

By "AN OLD FOGGY."

REVIEWING the raw material relating to the educational topics of the year, I wish, with Canon Dennis, I could claim to possess "a light hand with what is sometimes heavy pastry." Educational pastry-making is a troublesome profession and engages the energies of pastry-cooks innumerable. An enterprising medical practitioner of my acquaintance has diagnosed a new disease to which children are susceptible. He calls it "Pedagogophobia." When I observe what Canon Lyttelton calls "the weltering chaos of conflicting and unassimilated principles in which the profession flounders," it seems that, in the busy world which you frequent, pedagogomania is epidemic. There is little except stale pastry in the educational records of the year. Revolutionary political events absorbed the attention of legislators, and, although numerous Bills were read a first time, the schools were left alone. Had Mr. Holmes not issued the notorious circular, or had he written with advice and meditation, "seasoning all with humanity and sweetness," the educational year would have been dull and uneventful. And perhaps Mr. Runciman would not have been invited to devote his somewhat over-rated abilities to matters bucolic and piscatorial.

Mr. RUNCIMAN, I observe, speaking to some league or other, said: "The first duty of a Minister of Education when other questions have been got out of the way will be to see that the Education Act of 1902 is wiped out." This utterance confirms an impression I ventured to form regarding the qualifications of this gentleman to merit the prizes awarded to him in the school of politics. A statesman in a position to acquaint himself with the facts would not say that during the past ten years the development of education has been retarded. On the contrary, he would observe indications of substantial progress in all branches. All that has been accomplished was rendered possible by Mr. Balfour's Act of

1902. When, however, a member of the Cabinet, who for five years has had peculiar opportunities of informing himself, announces it to be his first duty to "wipe out" a great reforming measure, he is, I think, incapable of forming an impartial opinion or has surrendered to political prejudice his capacity for judgment. In the matter of the Holmes Circular Mr. Runciman, confronted with a difficult Parliamentary situation, failed to rise to the occasion. He should have lain low and not attempted, like Bottom, the Ercles' vein.

* * *

ELEMENTARY-SCHOOL teachers, it is not surprising, perused the circular with "indignation, resentment, and disgust." They saw in it the "revelation of a policy planned with Machiavellian subtlety and pursued with Machiavellian stealth." The surprising thing is that a man who, in his personal relations with teachers, "avoided all suspicion of arrogance" and was much revered, should have been able so successfully to dissemble his opinions. But, if what was written by this high official was a correct description of the limitations of a class and a legitimate criticism of their work, the manner of doing it was as completely erroneous as Mr. Runciman's manner in the House of Commons. The chief official of the ubiquitous gentlemen who constitute the eyes and ears of the Board is quite entitled to form the opinion, "on information received," that elementary teachers employed as Inspectors by Local Education Authorities "are creatures of tradition and routine," uncultured and imperfectly educated, "vicious," and a hindrance, rather than an aid, to educational progress. Holding this opinion, it was his duty to report this disturbing condition of affairs to his official superiors. Further, it was the plain duty of the official superiors, if they accepted the dismal conclusion, to inform the Local Education Authorities with all speed. The Board, no doubt, would justify their failure to adopt this course on the ground that it would be an interference with the discretion of local bodies. The Board unfortunately has never displayed any reluctance to intervene in numberless administrative trivialities which do not matter; but on this vital question, that does matter, the existence of Inspectors who "stereotype routine," "perpetuate cast-iron methods," and form an effectual bar to development and progress, the Board has not the courage of its convictions. This, in my view, is the disquieting conclusion to be drawn from the incident of the Holmes Circular. Mr. Holmes might repeat a rejoinder attributed to Matthew Arnold when the policy of the Board was questioned. "Madam," he said, "your logic is irresistible, but unfortunately I work for an ass of a department."

* * *

IN the discussion in Parliament on the Circular, Mr. Balfour said, among many other appropriate things: "My only regret with regard to the great Education Authorities who have control of the policy of education in their counties is not that they are too independent of the department, but that they are not independent enough. . . . And I should like to see them with a policy of their own suited to the peculiar needs of their own districts, and less subject to the cast-iron system that may be good for one part of the country and not good for other parts of the country, at the same time." Mr. Balfour passed the Act of 1902 intending to decentralize educational administration. But, although responsible Local Education Authorities have been established, the Board has deliberately manoeuvred to control their activities in every particular. The waste of time in needless correspondence, the waste of money in the performance of the same duties by officials, central and local, is scandalous. Local Authorities have brought into existence elaborate administrative machinery. It is well adapted to relieve the Central Department of much detail and routine. Far from adopting a policy of devolution, the tendency has been for the Board to extend its sphere of inquisition and interference. That this extension is in a pernicious direction is demonstrated by the rapidly increasing cost of central administration. In 1902-3 the expenditure was £149,668; in 1909-10, £205,848.

EX-H.M.I. HOLMAN reminded some one recently that the Board of Education is sometimes a junior official, sometimes a senior official, sometimes one of the permanent secretaries, sometimes the permanent Head of the Department. During the past eight years the Board has been Sir Robert Morant. A man of conspicuous capability and exceptional determination, he has reorganized, regulated, and ruled a great department of the State. He has also successfully checked any idea of transferring responsibility from Whitehall to local areas. He has now perhaps completed his effectual work, and it will be advantageous for "the system" to be controlled under less pressure and to be granted a period of rest. Sir Robert Morant's withdrawal from the Board will be lamented by some who realize the difficulties of the position he has so adequately filled; it will be regarded with satisfaction by those who believe that a large measure of devolution is essential in educational work; and it will be loudly applauded by others who clamour for sympathetic consideration of sentimental grievances. Among Sir Robert's legacies to the Board is a gentleman of unquestioned, although I am told somewhat perverted, ingenuity, who now occupies a position of responsibility. The esteem with which he is regarded is illustrated in the conundrum: What is the difference between the Board of Education and Mme Tussaud's? To the initiated the answer is simple. Has not the establishment in Baker Street a Chamber of Horrors!

* * *

WHEN "a simple child that lightly draws its breath" comes to be reared solely for the benefit of psychological observation and research, it may look to have a good time. "Perhaps in future," Dr. Slaughter is reported to have said, "we should give the child six hours in the playground and one grudging hour in the classroom—the psychology of the child can be better studied in the playground than in the classroom." This arrangement, so acceptable to the child, would solve immediately the difficult matter of smaller classes in elementary schools; it would settle the question of school accommodation for many years. The energies of the teaching staff might be concentrated during each grudging hour of school attendance on a fifth of the children on the registers, while the remaining four-fifths exhibited their natural instincts in the playground to the delight of a trained certificated and registered psychologist appointed by the County Council and approved by the Education Board.

* * *

IT is old fashioned to suggest that children should be rendered reasonable rather than reasoners, and that the first thing to teach them is that it is reasonable for them to obey and unreasonable for them to dispute. The new fashion is to assume old heads on young shoulders—to imagine that, if left to himself, the child will do what is right and discover instinctively what is worthy. But a child, as Canon Wesley Dennis reminded a gathering of teachers, "like a puppy, has to be taught obedience. A child, like a puppy, has a very elementary sense of right and wrong. The sweet and pleasant attracts, the opposite repels. Work is shirked if laborious; looseness comes easily if unchecked." The comparative failure of the costly system of national education in this country is unquestionably due to a relaxation from the mental and moral discipline of strenuous work.

* * *

DR. GOW is of opinion, and I agree with him, that during the last ten or fifteen years a considerable mistake has been made in the conduct of primary schools. "Until that date," he says, "expertness in the three R's was the criterion of excellence, and though the children learnt little else they learnt these thoroughly." The element of thoroughness, valuable in all branches of education, has been crowded out in a large number of elementary schools. The curriculum has been "enriched" by the addition of new subjects; methods of teaching, well tried and simple, have been discouraged in favour of novel experiments. The plain and wholesome, if limited and unattractive, mental fare of an earlier day has

been superseded by a varying diet of fancy products. The substance has been dropped in pursuit of the shadow. A condition of affairs is assumed which does not at present, and cannot for many generations, exist. All the little boys and girls are supposed to possess the same background of intellectual receptivity and a potential capacity which will respond to any stimulus or demand. The system is a failure, and those in authority must know that it is a failure; but their conception of a remedy is confined to the appointment of additional Inspectors or the framing of regulations involving additional expenditure.

I READ with interest the report of a discussion at the College of Preceptors on the "School as a Direct Preparation for the Work of Life." The subject stimulates the jaded brains of pedagogomaniacs. Translated into the language of the expert, it is termed the "rationalization of occupational education." I don't quite know what this means, but it sounds very fine! That the school, whatever its curriculum, must be a preparation for the work of life is a platitude. But I assume the advocates of occupational education want something more than this. They desire the school to prepare for a definite calling. There was a time when the would-be elementary teacher was subjected to the process of "occupational education," first as a "candidate," then as a pupil-teacher, and finally as a student in a training college. The result has been, to quote the Holmes Circular, the production of teachers "uncultured and imperfectly educated" and "creatures of tradition and routine." In this important profession, therefore, vocational schooling has been abandoned in favour of a liberal general education. I agree with Miss Buleraig, who suggested that those who were old enough to have seen the failure of experiments promoted by able men and women in the past might be pardoned if they were not ready to acknowledge that everything old has been a failure and everything new was going to be a success.

A YOUTH of my acquaintance, in my village, aspires to become an elementary teacher. He has just been presented for what is known as the first part of the Preliminary Examination for the Certificate, of which one of the subjects is drawing. I referred last year to a new missionary appointed by the Education Board who is permitted to promulgate a new gospel for the teaching of drawing. This examination test, I assume, is an illustration of this gentleman's ideas of what is required. It was as follows:—

Make a drawing from memory of *one* of the following groups of objects as it would appear if placed several feet in front of you below the level of the eye:—

- (a) A basket with flat sides and a handle, an earthenware jam jar, and two apples. Or,
- (b) A barrel, a rectangular packing case, and a coil of rope.

What is this test supposed to discover; of what use is it as a means of ascertaining whether the student is competent to teach drawing in an elementary school? The teaching of drawing in elementary schools, if it is to be of any value, must concern itself, first and last, with training in the accurate representation of things observed. This being so, the teachers must also be trained to see correctly and represent with accuracy a given object. Why, therefore, waste their time by imposing upon them a futile exercise which is not a test of careful observation or of ability to draw correctly? The youth from this village has been trained to endeavour to observe faithfully and to represent truthfully common objects and natural forms—"not to compose nor imagine nor experimentalize, but to be humble and earnest in following the steps of Nature and tracing the Finger of God." He has been taught also that the Board which he is to serve now discourages in elementary schools the memorizing of the multiplication table and other useful "aids." But, although he could not remember having seen a basket with flat sides and a handle, he "drew on his imagination" and left the examiner to imagine that the jam jar and the two apples were

WHEN experts, in search of something new, discuss the merits of tinkering the curriculum with "occupational" intent, it is refreshing to turn to the utterances of a distinguished man of science who does not suffer faddists gladly. At a conference on the training and education of engineers, Prof. Silvanus P. Thompson urged the necessity in secondary schools, both old and new, of a definite educational aim—an educational, not an occupational, aim. He alluded to the report of a special committee appointed by the Institute of Civil Engineers which deprecated "specialization" up to the age of seventeen, considered that a leaving examination in secondary schools was advisable, and wished for the instruction in mathematics to be somewhat modified. As to teaching science, the committee regarded a general knowledge of elementary physics and chemistry as preferable to the pursuit in detail of any particular branch. Prof. Thompson, while admitting that the study of the now discredited Euclid in the hands of an indifferent teacher was probably the worst possible way of teaching geometry, deplored its neglect. He expressed the deliberate opinion that boys nowadays are less capable of following a sustained train of thought than they used to be. "The mental discipline of a chain of connected thought is strange to them. There may be other causes also," he said, "but this is a cause."

THE heuristic method, said Prof. Thompson, a method used in degree by every teacher since the days of Socrates, has been absurdly pressed even to the detriment of progress. The untiring, if rather tedious, exhibitor of the "method"—despairing, I suppose, of securing by Act of Parliament the appointment of a man of science accustomed to adopt the attitude of a discoverer as the head of every school—suggests an attractive alternative, abolition of the head master. In place of this autocrat he would appoint heads of departments of co-ordinate rank and equal pay. "Co-ordination" and "equality" are expedients frequently discussed by Associated Head Masters. Perhaps a new Association will be formed for the extension of the principle and resolve that the organization of the Government would be improved if, instead of a Prime Minister, members of the Cabinet enjoyed co-ordinate rank and equal responsibility.

So you are to have your Register of Teachers—or, perhaps I ought to say, council representative of the whole of the teaching profession charged with the duty of framing a Register. Well, I hope you will be happy when you get it! I have perused Sir R. Morant's full and frank report of his several conferences with the agitators, and I must confess a failure to discover any probability of a Register, within the limitations of the Act of 1907, likely to be of any conceivable value to anybody. Between the different grades of teachers to be enrolled "there is too great an inequalitic and distant proportion." At the conferences, I observe, the delegates, unable to suggest any practicable solution of the many difficulties likely to arise, complacently ignored them, and clamoured not so much for a Register as for the establishment of a professional Council. Sir R. Morant, on behalf of the Board, discreetly washed his hands of the whole business and said in effect: "If teachers, elementary and secondary, teachers of art, music, and technology, teachers of the deaf and the blind, imagine their interests to be identical and insist upon getting into the same boat, the Government is not going to act as pilot or insure the craft." But it will be launched by Order in Council! If teachers want to form professional unions, why cannot they do so? And what is to prevent the different sections from forming registers?

REPLYING to the inquiry why her child was not at school, a parent wrote: "Jessie isn't coming to school until you get her some boots. If the County Council expect me to *allow* my child to come to school, I expect them to provide her with proper boots and clothes." The father of this girl, it is

stated, was working and quite able to provide what was necessary. But why should he do so? Jessie's parents have observed, no doubt, the rapidly increasing disposition on the part of the State to relieve them of their responsibilities. Jessie has been compelled to attend school; she is provided with the materials for study free of charge; has been fed, perhaps, and assuredly medically inspected and "followed up." The benevolent Authorities who insist on doing so much may certainly be expected to provide proper "boots and clothes."

* * *

WE must not only make it worth while for the child to attend school, but provide substantial rewards for industry. This is a letter, said the High Master of the Manchester Grammar School, which appeared in a Manchester paper after the annual prize-giving: "Dear Sir,—If I had known that the prize which was handed to my son yesterday in the Free Trade Hall, and for which he worked so hard, was going to be a book of such paltry value, I should never have encouraged him to work for it as I did.—Yours faithfully, INDIGNANT PARENT."

* * *

In pursuit of the policy of requiring public authorities to do what people ought to do for themselves, more officials are to be appointed to see that Jessie's brother Thomas when he leaves school obtains suitable employment. This is on the assumption that, when a boy can get a place to run errands at 5s. a week, the father fails to realize that he is only helping the lad to become a loafer. And when a position agreeable to Jessie's brother and to the officials in charge of the Employment Bureau has been discovered, the unfortunate employer, if the Union of Teachers has its way, must, under a penalty, see that Thomas until he reaches the age of eighteen periodically produces a card "attesting his attendance and good conduct" at continuation classes. And I gather that, if this process is a failure, Thomas should be entitled to live like a gentleman. "It shall be the duty of the State," the teachers suggest, "to make provision for the maintenance of any young person who may be deprived of the means of living as a result of the operation of any National system of education." In his flutter with the rate-payers it is "Heads I win, ditto tails," for Thomas.

* * *

THE National Society for Promoting the Education of the Poor celebrated its centenary during the year. Its record is a brilliant one. In these days, when little can be done without the stimulus of State aid or the infliction of a local rate, the sacrifice and voluntary effort represented by the schools founded by the Society are ignored or discounted. Early in the last century the establishment and maintenance of a school was not easy of achievement. An old school-master records the proceedings at a public examination held on the anniversary of the opening of his school. After chapters of the Bible had been read by the barefooted ragged little lads, "we showed our writing on slates, which was very good indeed, and then proceeded to work sums in the simple rules. So quickly and correctly were these done that some of the assembled company openly expressed alarm, and the chairman was obliged to explain that these boys were to be advanced no further, and that, in fact, they were on the point of leaving school to go to work, having finished their education. Only this qualifying assurance prevented certain of the half-hearted patrons withdrawing their subscriptions." In 1811, of a total of 1,141 schools then in existence, 1,059 were associated with the Church of England; forty years later the number had increased to 8,571, and in 1901 to 11,734. The Act of 1902, it was anticipated, might prove a slippery slope for voluntary schools, and in 1910 the number of Church schools was 10,409. The buildings afford accommodation for between two and three millions of children, and their replacement value may be estimated at about twenty-five millions.

ALTHOUGH Mr. Sadler speaks much and has a rich gift of language, he is never afflicted with what is termed "logodiarhœa." He suggested some time ago, I see, that in these days we labour under the disadvantage of an uncertainty as to the efficiency of one particular form of intellectual training and also from a reluctance to submit to authoritative control. One of these days, perhaps, a Prime Minister will consider whether it is worth while to arrange for a body of experts to review as a whole the work now attempted in the schools—elementary and secondary—with the object of ascertaining whether they are trying to do too much or too little, on right or wrong lines. This task might be a fruitful one for the Consultative Committee, which hitherto, according to Canon Lyttelton, has been kept out of mischief by being saddled with a mass of intricate and nearly insoluble problems. Our reluctance to submit to control in educational matters is due, I think, to a doubt as to its authoritative character. It is so frequently a control, not of the nation's best intelligence formulated with care and deliberation, but the "expedient," the "idea," or "fad" of an individual who happens to occupy a position of responsibility. Or it may be the control of a number of officials, and, as R. H. Quick would have said, represents collective folly, which is much more capable of expression than collective wisdom. With a new President of the Board, a new Permanent Secretary, and a New Year, we may look forward, perhaps, to a new order of things in the future. Moreover, "fear, desire, and hope draw us ever towards that which is to come, and remove our sense and consideration from that which is."

TWO SCHOOLS IN NOVA SCOTIA—AND A MORAL.

By CONSTANCE MEYERSTEIN.

WE each of us secretly worship our own special niche in the world. The soft impeachment may be denied, but, in his heart of hearts, the lawyer is always legal, the physician medical, the business man commercial. Hence, on holiday-making intent, with no thoughts of school hygiene or heuristic methods or any other educational problems, I lightly fled to Canada, and, within the first week of my sojourn, I found myself spending a whole day in a Nova Scotia school. The little town of Guisborough numbers about 1,500 souls and is important as the county town for the county of Guisborough. Here are, perhaps, a dozen shops, two small hotels, the blacksmith, the cobbler, the horsekeeper, the lumberman. The rest of the inhabitants are chiefly fishermen and farmers. A fine, upstanding, honest, industrious race—poor if poverty is measured by the counting of shakels, rich if contentment and health and the power of satisfying needs count as wealth.

Independence and unselfishness are virtues dear to the Nova Scotian; also a certain large and noble patience, developed from long struggles with the remorseless forces of Nature. He has the kindly and courteous manner that springs from "politeness of the heart," and a fisherman who rowed us for two hours while we fished refused to take the payment agreed upon. "The pleasure of seeing the ladies enjoy themselves so much is quite enough" was his firm declaration. I am told that this experience of ours is by no means exceptional.

The Nova Scotian is a strong and forceful personality, and counts largely in the development of Eastern Canada. In all human communities there are social grades, and Guisborough is no exception to the rule. It is a democracy; but democrats as well as aristocrats divide themselves into classes. The school trustee is a storekeeper; the executive officer and prosecutor for the local option act is a farmer and fisherman; storekeepers are the municipal representatives. They take

much interest in their school; but they have the defects of their qualities. This shows itself in the decorations of the schoolrooms. The walls were rather bare of pictures, and the few I saw were inartistic and uneducative. My mind regretfully returned to a school I visited last summer in a very small German town. Pictures and maps suitable to the lessons of the term were hanging on the walls—the teacher could refer to them at any time and thus visualize his words to his pupils. In a carefully indexed cupboard were more pictures and maps to replace the ones in use should the head teacher think such a change desirable. In the Canadian school maps were conspicuous by their absence, and of scientific apparatus there was no trace.

The school trustee labours under the disadvantage of lack of comparison with, and lack of understanding for, the realities of education. Memorized bookwork—that ideal of the Middle Ages—stands for “education” in the minds of those who have had no opportunity of grasping larger issues, and it is natural that the Nova Scotian should act on those narrow lines. One must look to time and experience to broaden his views.

The little town itself lies on the shores of a harbour, an inlet from a large bay which opens into the Atlantic—the sea is at its feet, low forest covered hills rise behind it, the soil is poor, the climate in extremes. There is but little money, and barter is still a commercial method; local option has been adopted and strictly enforced, so there is but little drunkenness. There is no town nor parish hall, there are no concerts and no dramatic entertainments—a remote and peaceful spot where family life still reigns supreme.

The school house is a large one, airy and well lighted. It includes the public (elementary) school with its nine grades, and the high school with its three grades. Miss M. is the principal of both schools, and rules a kingdom of some 109 children. From the High School they pass on to college, either in Halifax or Truro (a neighbouring town) or Montreal.

There are three teachers in the primary school—each takes three grades. Miss M. herself is the entire “staff” of the High School, which interested me more particularly. The day I visited her department there were forty-three pupils present: thirteen boys and thirty girls. They varied in age from perhaps fourteen to seventeen years. I remarked on the greater proportion of girls, and Miss M. explained to me that the boys generally became farmers or lumbermen or fishermen and leave school early. The girls became teachers or stenographers, and went to college accordingly. I was appalled by the number of subjects the unfortunate children had to learn—ten in all. These subjects are English, composition, mathematics, botany, physics, geography, French, German, Latin, and Greek. Two of the languages are optional. That any adequate knowledge of each of these ten subjects could be held by any ordinary brain seemed to me to savour of the phenomenal, and it was with difficulty I realized that Miss M. single-handed prepared these children for the examinations that were imminent. She was a pretty and charming young woman, she worked night and day to keep her scholars and herself abreast of the mass of information required of them, and the result, as far as education was concerned, was pathetically limited. I heard arithmetic, mathematics, French, and botany lessons, all taught with answers to the examiners’ questions. The botany lesson was a lesson of flowers; the French lesson was a parrot-like repetition of grammar and sentences memorized. I could not begin to think of the Greek and Latin, and the mind of the teacher must consume her to cope with the demands of the Nova Scotian Board of Studies.

I was struck with the conscientiousness both of herself and of her children. Teaching was to her a vocation as well as a profession, and her children’s success was so much to her that she gave up her evenings to the friendly coaching of the more backward candidates. They were as anxious to learn as she was to teach; she had created an atmosphere of industry and affection. Given a reasonable curriculum and a larger staff, great results should be forthcoming with this material.

A Country School.

Some three miles from Guisborough is a district of scattered farms, separated by stretches of balsam and spruce wood—rough and infrequent roads connect them with each other and with the little country school, where fifty children assemble daily. There is no compulsory education in Canada, and no age limit, so the boys and girls ranged from six to fifteen years, and four of the elder ones were preparing to enter the high school in Guisborough.

A young teacher of nineteen constitutes the staff. The course of pedagogic training is spread over four years, and is divided into four grades—D, C, B, and E. Between each grade the teacher is free to get her practical training by taking charge of a country school. There she remains a year and then returns to college to continue or complete her training. I say “her,” because nine-tenths of Canadian teachers are women. The salaries are very low, the work very hard, and men are not attracted by a career that offers so little financial inducement. Miss L. has given one year to the South Manchester Country School, and returns to college this autumn.

This annual change of teacher is doubtless trying for the children, as there is no permanent staff to keep up continuity; yet, as a method of training, it must be an excellent one. The plan has, I gathered, arisen through the shortage of teachers in Canada. I see in the report on the Quebec province that certain schools cannot be kept open because there is an insufficient number of teachers, and it is imperative to take advantage of their services all through their college course.

One morning’s visit hardly entitles one to have an opinion on the teaching, so I give my impressions of this country school for what they are worth. The actual grounding in reading and writing was good; the children really learnt to read and write so that the knowledge became part of themselves, and I doubt if they will ever forget it. Arithmetic was more artificial; they learnt rules by heart, their reasoning powers were undeveloped, and “factors” were unknown quantities. They appeared conversant with the geography of their own province, and desultory questions were put to the candidates for the high school on the names of chief towns or rivers in various countries of the four continents. I heard no history lesson, but I gathered there was no co-ordination of subjects, and the school Readers were chiefly short stories and easy poetry. But, if the Education Authority had not learnt to frame a wise curriculum, its representative—the teacher—had learnt to evolve character from her pupils. Miss L. had obviously gained their affection and respect: a pleasant order was maintained by her gentle firmness; her desk was covered with flowers, gifts from the children; and they one and all expressed deep regret at her imminent departure.

A pleasant school entertainment stands out in my memory. A hot, sunshiny afternoon in July—a beautiful drive through the pungent balsam woods, with distant glimpses of a blue sea—a clearing in the woods and there was the little school, while down the road, all dressed in white, marched the young schoolmistress at the head of a procession of her girls. The children had decorated the school with spoils from the woods, and we sat in a bower of branches and flowers. One of the school trustees—a local farmer—took the chair and gave us a short address, calling us “friends, parents, and electors.” Then the entertainment began; every child, either singly or in class, contributed by reciting or acting. The subjects were chiefly chosen from their reading books, and great trouble had been taken in selection and rehearsal; so they acquitted themselves to the satisfaction of the school trustees, the parents, and the visitors.

The afternoon closed with another little speech from the chairman, a warm vote of thanks to Miss L., and cordial and sincere words of regret at her decision to leave the South Manchester School.

A Conclusion.

Plato in his “Republic” sketches a complete curriculum for the youth of his country. A modern Plato working in the

light of modern needs would be a Providence to his nation could he induce his Education Authority to accept his conceptions. I felt a faint glimmer of what such a philanthropist might suggest as I learnt more of Nova Scotian country life. The three chief occupations are farming, fishing, and lumbering. Many men are combinations of farmers and fishermen. The women have to bake, sew, attend to the dairy, and assist in the haymaking. Labour is very scarce, there is but little hiring of servants or farm hands. Under the stress of modern competition and agricultural science, the successful farmer must understand the use of machinery, the value of soils, the cheapest and best methods of fertilization—both as farmer and fisherman he must co-operate if he wants to produce economically. As a unit, production is so expensive that he must fail; as a co-operator he can buy more cheaply and sell at a higher profit.

If he can realize this point of view of his profession he will understand its possibilities and he will enjoy its developments—it will mean a career and a future for him, a successful future, with the satisfaction of material success in a life that for his father had spelt failure. He will find in country work the inducements that now he seeks in the town, and the young Nova Scotian will cease to emigrate across the border to Boston, at present his Ultima Thule.

Now this science, this social economy, this power of co-operation, of adapting means to ends, require for their development the broadest and best of educations. Observation, power of discrimination in experiment, courage to venture, accurate reasoning, intelligent interest in imperial and local government, comparative industrial history, social history, agricultural history—all must be included. What scheme of education can be devised that will do this? The framer of the curriculum must have a clear scheme of work in his mind that is to extend systematically over the seven years (seven to fourteen) of the child's school life. This curriculum would include history—both general and special—geography and literature, both closely co-ordinated with history; the drawing necessary to the understanding of both history and geography—arithmetic and geometrical drawing both in co-ordination with the handwork that should play an important part in the curriculum. If the child learns to make the implements that he will have to use, his education must bring him into relationship with real life, and it is in such relationship that the development of character is achieved.

During all these seven years the nobility of agricultural callings should constantly be brought to the child's notice. It is the teacher's part to evolve from his lessons a hymn of praise of handicraft. The schoolroom atmosphere should be imbued with it, his country's history, its relationship with other countries, its forms of government, its geography, physical and political, its facilities for production and distribution, all must revolve round one great luminary, that of the glory of agriculture.

At fourteen, the children who wish to study further can be passed on to the high school. Here the scheme of work should be uniform up to sixteen—after that it would vary according to the prospective career of the pupils. A boy or girl who is going to college to take up a learned profession will require a different curriculum to the youth who proposes to stay on the land or go into some local business. Both schemes should include French—which is the native language in many parts of Eastern Canada, the history of municipal government, agriculture, science as related to agriculture, and afforestation, methods of distribution of produce and systems of co-operation—political economy as far as it touches real life—wages and taxation, literature, through standard books that must be read on the subjects under consideration. Handwork should still be carried on as an important educative instrument and always in relation to real life; school life should be permeated with its dignity and value. Is it not possible, nay probable, that with such an education the youth of sixteen would have no desire to leave his native place?—the love of country, the sense of success on the land would have become instinctive and would bind him to the soil for ever.

Family life is the basis of sound social conditions. The

family is the unit and its combination forms the State. Nowhere have I been more impressed with this than in these little towns of Nova Scotia. The school staffing is deplorably low: the school curriculum is uneducative in its variety and superficiality; yet the children grow up into strong, honest, independent, intelligent men and women. Their real school is their home, and it is there they learn the lessons of life which are to make them what they are. The teacher, brought up herself in such a home, carries on its influence into the school, and it is so woven into the child's moral fibre that it becomes part of himself.

If to this great and rare home education could be added the influence of good schemes of school work, beautiful school-rooms, and adequate staffing, we might dream of a large future for Nova Scotia. Her sons and daughters would refuse to leave her. Successful tillers of the soil and fishers of the sea, they would find on their own shores the results that now they seek elsewhere, and Eastern Canada would point to them and say: "Behold the Nova Scotian! He is the maker of a nation, and it is his home *and* his school that have made him what he is."

REVIEWS AND MINOR NOTICES.

Body and Mind: a History and a Defence of Animism.

By WILLIAM McDougall. (10s. 6d. net. Methuen.)

The history of animism that occupies the first chapters of Mr. McDougall's book is, as he explains, only an introduction. The value of the history is its testimony to the continuity of ancient and modern conceptions, and the labour of the historian is his justification for undertaking the defence which to the greater number of readers will be the main interest of the book.

Mr. McDougall frankly avows that his own bias in favour of animism as opposed to materialism is due, not indeed to religious convictions, but to sympathy with the religious attitude towards life and belief in the moralizing influence upon thought and conduct of the belief that human personality is not destroyed by death—"a belief that every vigorous nation seems to have possessed and the loss of which has accompanied the decay of national vigour in many instances." Consciousness of being what Burke calls "flies of a summer" is not conducive to high thought and sustained energy.

To many readers, Mr. McDougall's opinion that the "mechanistic dogma" no longer holds the scientific world in so close a grip as during the later nineteenth century will seem an under-statement of the reaction against the aggressive materialism that a quarter of a century ago was "pegging out claims" for its scientific posterity in all regions of speculative thought. In the chapter "Argumenta ad Hominem," however, Mr. McDougall points out that the defenders of animism "are not confined to the authors of popular treatises and manuals of devotion, but that amongst them are a number of men whose philosophical achievements give them the right to a most respectful hearing." Sir Oliver Lodge's attitude is enough in itself to avenge any indignities inflicted by arrogant materialism in the later nineteenth century, even Tyndall's prayer test. Animism is holding its own, but it is the aim of this book to point out that animism, which Prof. Tylor calls the groundwork of religion, is in itself inadequate to satisfy, but leaves the open door for a conception of the soul; and that parallelism, being based on mechanistic assumptions, leads, when coherent, to conclusions not practically different to those of mechanistic dogma, and, when "tacked" to animism, becomes incoherent and fantastic, as in Fechner's comparison of the body to a broken violin and the spirit to its music.

Mr. McDougall's criticism shows that the parallelistic hypotheses permit of no form of religious belief except Pantheism, and that they become untenable in proportion

as they attempt to reconcile psychophysical doctrine with belief in life after death. It is a case of desiring to eat one's cake and keep it too. Materialism gives the satisfaction born of exactitude won by limitation, animism the satisfaction of belief in possibilities still unfathomed; parallelism in its attractive presentation would enjoy both—it amputates wings but cannot suppress the desire to fly. Mr. McDougall remarks with justice that

Fechner, in discussing this subject, is woefully lacking in precision and consistency; the reasoning is loose to the last degree, consisting in the main of hints at analogies, suggestions of similes and metaphors, and it is only with such reasoning that he attempts to meet the essential difficulty of reconciling parallelism with belief in any survival of personality.

Fechner, and perhaps the defenders of parallelism generally, tend to clothe conceptions of animism in language drapery which Mr. McDougall and Prof. James, unlike as they are in style, are alike in never using. The later nineteenth-century supporters of mechanistic dogma have mostly written "in their shirt sleeves"—the phrase is Mr. Frederic Harrison's.

In the same chapter, "Argumenta ad Hominem," Kant's theory of the dualism of man is criticized for its inadequacy of basis, a conception of man and of his moral consciousness determined by the fact that he, through the circumstances of his life, was necessarily "profoundly ignorant of human nature." The passage is suggestive of the recognition that human nature is the material for physical research, which seems a truism, but marks the distinction between the old and new psychology, and is illustrated by Prof. James's analogy of the difference as a naturalist between the collector of zoological specimens and the man who is in full sympathy with animal life. The voices of Joan of Arc and the demon of Socrates have always been at least tolerated as phenomena, but the dual personality of any Sally or Billy now creates interest.

In saying that Prof. James, the exponent of the transmission theory, "explicitly rejects the conception of the soul as a unitary and individual being," Mr. McDougall may somewhat over-define James' mental attitude, which, as regards the soul, as distinct from animism, is merely agnostic. The word to him, like "cause," which he also repudiates, has become distasteful through being hackneyed and overweighted with p attitudes. But his consciousness of the limitations of animism as a mere diffusion of life is shown in a passage in his Ingersoll Lecture.

What we all wish to keep is just these individual restrictions, these self-same tendencies and peculiarities that define us to ourselves and others, and constitute our identity so called. Our finitenesses and limitations seem to be our personal essence; and when the finiting organ drops away, and our several spirits revert to their original state and resume their unrestricted condition, will they then be anything like those sweet streams of feeling which we know, and which even now our brains are sifting out from the great reservoir for our enjoyment here below?

James realizes what a soul connotes, yet the use of the word seems to him a "name masquerading." But he does not close the door, and he anticipates the possibility that the word may acquire a significance that it had not for him when he repudiated it. Probably belief in a soul as distinct from animism is bound up, not necessarily with a structural religion based on authority, but with what Prof. James has, in his "Variety of Religious Experience," termed "over-belief"—i.e. something over and above a belief in a source of life from which our own emanates. Sabatier has clearly defined the distinction between religion of authority and religion of the spirit, and over-beliefs that have any historical continuity are more or less dependent on traditional authority. Hence Mr. Wilfred Ward's expressive phrase in apology for the ultra zeal of the Roman Catholic Church on the ground that she is the guardian of "the residuum," i.e. the essentials of faith, which is as sober by what one may call disarrangement. Now the defenders of animism have not necessarily any structural over-beliefs—they are only keeping the ground clear, each in his own way. But the belief in a soul necessarily separates them

into constructive and merely permissive groups, while the former are again separated by the line as defined by Sabatier. Mr. McDougall says that he can lay claim to no religious convictions, but in so far as he differs from Prof. James it is in facing the mystery of a soul creation, with the accompanying perplexities raised by the acceptance of this definite form of animism, viz., "What is the pre-natal history of the soul? What becomes of it at the death of the body? What part does it play in heredity?" questions attempted by Dr. Schiller in his "Riddles of the Sphinx."

Mr. McDougall's suggestion of an independent soul existence or personality through development of psychical memory independent of physical basis is his contribution to the soul belief, and Prof. James's attribution to the soul of selective power in earth experience is another form of expressing the theory, not consistent, Mr. McDougall thinks, with his transmission theory—the transmission of life from its source through the function of the brain. But a probable difference between them is that Prof. James's conception of personal survival is life individualized—life not individualized being unconscious—and to him life is in itself adequate. He repudiates, in his "Religious Experience," the theory that a world, beautiful as our earth world, can be a place of probation. Mr. McDougall, though he may accept no religion of authority, accepts a religion of the spirit in that sense of conduct is to him of pre-eminent value. And sense of conduct conditions memory, responsibility, a soul, something corresponding to what we crudely express as a "judgment day." One cannot trace the differences of conception between Mr. McDougall and Prof. James, so nearly in accord up to a certain point, without recalling Matthew Arnold's insistence on sense of conduct as a determining factor in conception of life, and it is because Mr. McDougall is possessed by this that the soul theory is accepted by him. The most attractive, and, perhaps, the most valuable parts of the book are the criticisms of parallelism as opposed to animism, the theory of the special memory function conditioning the existence of a soul, and the indications, in the examination of differences between the author and Prof. James, of the grouping of defenders of animism through temperamental variation.

The Essentials of Psychology. By W. B. PILLSBURY.
(5s. 6d. net. Macmillan.)

When Prof. Pillsbury tells us that "psychology may be most satisfactorily defined as the science of human behaviour," we settle down comfortably to 358 pages of wise and not too technical philosophizing on the ways of human beings. But as we proceed we feel inclined to object that the definition should have been: Psychology is the science of the synapse. The author points out that a science of human nature cannot be built up out of sententious aphorisms; so he launches out into the principles of physiological psychology. Speaking generally, his treatment is excellent, and is marked by the admirable quality of keeping physiology and psychology in touch throughout the volume. The common and irritating defect of such works is the giving of two complete and independent sections—one dealing with synapses and the rest, the other confining itself to the well-worn lines of empirical psychology. In this volume we find that the synapses are hard-worked throughout. They have no more leisure when the author is dealing with memory, imagination, or even will than they have when he is busy with sensation. We do not remember ever reading a psychological text-book that so consistently and satisfactorily applied recognized physiological facts to the explanation of psychological phenomena.

The only point in his book, the author tells us, in which there is deviation from traditional usage, is that he introduces rather more of the results of recent experiment. This is certainly a step in the right direction; but it should be accompanied by a greater number of references to authorities than would be sufficient in an ordinary text-book. Now there are scarcely any references given in the text, though at the end of each chapter there are some general references for further reading. Personally we are gratified to find that Prof. Pills-

bury returns to the Cattell view of the extreme brevity of pure voluntary attention, but students should get some intimation that Titchener and others have greatly extended the time. Then, again, the earnest student is irritated by such a statement, in the section on work and rest, as: "The one important investigation on this point," &c. There should be a foot-note here mentioning the particular investigation referred to. Let us have all our grumble out, and then we can go on to pleasanter matters. Occasionally the exposition will be found confusing to students who do not know the subject so well as Prof. Pillsbury does. In dealing with cells and their axones the author speaks correctly enough of "the body," meaning the body of the cell, but an experiment showed me that an ordinarily intelligent student made the mistake I expected: he thought of "the body" as the human body. Then on page 23 we have "the nervous system. . . a colony of some eleven thousand million amoeba-like organisms"; and on page 28: "Our picture of the nervous system is of a mass of ten thousand millions or so of these minute organisms enclosed," &c. Students are apt to regard a thousand millions as a serious matter. "The one . . . the other" is a troublesome construction, and there may be difference of opinion about the order of reference to the preceding terms; but our author, on page 108, uses one order of reference and on page 125 uses the other. Worst of all, from the student's point of view, the printer has not played the game on page 182—in the Müller-Lyer illusion diagram the lower line is not only apparently, but really, longer than the upper one. Again, on page 320, while the phrase "a loss of inertia" is perfectly correct, it is apt to confuse students who are not familiar with the technical terms of mechanics.

The title of the book makes one wonder from what point of view the author has made his selection of what is *essential*. We are inclined to think that he had the teacher in his mind. In any case, the parts he has selected for special treatment are just those that are of vital consequence in education. The treatment of attention is especially good, including as it does an account of the mechanism of the process. Memory comes in for very thorough treatment—first in the chapter on Retention and Association, and then in that on Memory and Imagination. In the latter chapter the author gives us the laws of learning synthesized from the recent investigations of the experimental psychologists. This is followed by the laws of forgetting, the whole making six pages of matter that is invaluable to the teacher. The chapter on Work, Fatigue, and Sleep goes naturally along with memory as a practical guide to teachers, though it is separated from it in the text.

In dealing with reasoning, Prof. Pillsbury shows a gratifying lack of pedantry. The syllogism falls naturally into the unimportant place it deserves, and the whole paraphernalia of thought becomes natural and almost simple, thanks to some extent to the synapses. The instincts and the emotions come in very naturally just before the treatment of Action and Will and make an excellent preparation for this difficult subject. As a matter of fact, however, the author contrives to divest the will of its panoply of abstruseness and unintelligibility, the synapses again greatly aiding. We are warned not to go about separating the will from other spiritual elements as something special and sacrosanct. "Training will is, in the last analysis, training the man." The three pages following this statement are both useful and comforting for the teacher. In dealing with the faculty psychology our author takes the opportunity of expounding the present state of scientific opinion on the problem of transference. Here we are glad to find him sound. "The most that can be said with certainty is that the sort of training derived from any subject will depend more upon the way it is taught than upon the subject." It is unusual to finish a book on psychology, as our author does, by a chapter on the Self. It is ordinarily the starting point. But this method is amply justified by the results. We come to the subject with such a full knowledge of the activities of the self that we find no difficulty in recognizing it and in following the author's exposition. A great deal of repetition is saved by the arrangement adopted. A word must be said in praise of the exercises that follow all

the chapters. Occasionally these have to take the form of recapitulatory reproduction, but wherever possible they are practical applications to be made by the student himself, and cannot fail to enhance the value of his studies.

The Cambridge History of English Literature. Edited by A. W. WARD, F.B.A., and A. R. WALLER, M.A. Vol. VII: *Cavalier and Puritan.*

The seventh volume of "The Cambridge History" is, on the whole, solid and satisfactory, but not markedly interesting. Prof. Saintsbury's contributions, to which we always turn with the expectation of something fresh and good, are Chapter IV, on "Lesser Caroline Poets"; Chapter V, on "Milton"; and Chapter X, on "Antiquaries." In none of the three is the critic quite at his best. The "Lesser Caroline Poets" is a subject after his heart, but the narrow limits of a single chapter do not give him enough elbow-room to deal with it at his ease. Hence, though he gives an excellent general estimate of their intrinsic and historic importance, he fails, in dealing with them individually, to give us a sufficient taste of their quality. He illustrates Benlowes' faults, but not his beauties. He gives but a few sentences of general appreciation to the poetry of "The Matchless Orinda," and fails to suggest its strange and naively attractive combination of the watered-down thought of Donne with the clean, graceful rhythm and style of the Cavalier lyrists.

The chapter on Milton is strangely disappointing. It has nothing of the freshness and sparkle of his chapter on Shakespeare in an earlier volume. The peroration reveals him as no thoroughgoing admirer of Milton, and the concluding sentences put his position clearly: "His subjects may attract or repel; his temper may be repellent, and can hardly be very attractive, though it may have its admirers. But the magnificence of his poetical command of the language in which he writes has only to be perceived in order to carry all before it."

We cannot but distrust a critic of Milton who places his claim for the poet's greatness on the ground of form, and is inclined to think his character repellent. Dr. Johnson's remark about Milton, "He was born for whatever is arduous," shows an insight into the poet's temper, both as man and artist, which reaches a further point of sympathy than any attained by Prof. Saintsbury. We find it difficult to swallow the statement (page 136) that "Milton never attains the absolute zenith of expression—as does Shakespeare often." Given the different matter or content, surely the full and inevitable expression is attained by Milton at least as frequently as by Shakespeare, and the supreme quality of both is undeniable. But the chapter contains much good criticism. "Samson Agonistes," so often undervalued or misvalued, receives generous and understanding appreciation. The estimate of Milton's prose is penetrating, and leads to excellent remarks about the general qualities of periodic prose and the stylistic influence of the Bible at this period. Prof. Saintsbury's third chapter on "The Antiquaries" is, on the whole, his best. There is a good appreciation of Browne, who is easy to appreciate, but not easy to appreciate well; and a lively account of Sir Thomas Urquhart, who so triumphantly out-Browned Browne and who is too little known to modern students. The characteristic quality of Izaak Walton as a writer is seen and revealed, but his claim to rank among the Antiquaries is, we think, not clearly established.

Of the other contributors to the volume, the most distinguished are Mr. A. W. Ward and Prof. Spingarn. The former gives two solid and interesting chapters on "Historical and Political Writings." The latter contributes a short and stimulating account of what might appear a barren period of literary criticism. The most interesting parts of it are the adumbration of Bacon's æsthetic theory and the analysis of Hobbes's æsthetic.

Three other chapters on important subjects call for notice—those respectively on "The Sacred Poets," "The Cavalier Lyrists," and "Bunyan." The chapter on "The Sacred Poets" leaves the reader unpardonably cold. Each writer is carefully, and to some extent appreciatively, dealt with; but

we wish that Mr. Hutchinson had acted on the principle insisted on by Prof. Saintsbury (page 138), that "the indication, if only the re-indication, of the special quality and quiddity of writers . . . cannot be superfluous." Herbert's technique is closely dealt with, but the peculiarly personal quality of his poetic appeal, and the dramatic bent of his imagination, are not suggested. Vaughan receives good general appreciation, but the essential quality of his poetry, springing from a very individual form of artistic mysticism, is left unrevealed. Traherne's poetry and prose are sanely estimated; but, again, the peculiar character of the poetry—now Blake-like, now Wordsworthian, but at its greatest unlike anything but Traherne's imagination itself—is not indicated.

The chapter on "Cavalier Lyrists" gives a sympathetic account of Herrick, Carew, Suckling, and Lovelace; but it is vitiated by its style. Ben Jonson is described as "their tribal lord." Herrick, in his poetic classicism, is said "to assume the toga as his daily wear." This indulgence in what Diana Warwick called "the plush of speech" is felt to be peculiarly inappropriate in a chapter of literary history.

The account of Bunyan, by the Rev. John Brown, in Chapter VII, is interesting and discerning as far as it goes, but we are left wishing it had gone further. There is no working out, for instance, of the literary influences that can be traced in Bunyan's work—especially interesting because they are so few; that, for instance, of the emblem-writers, or of the popular romances and ballads, with their giants and monsters and stirring adventures. Again, there is no attempt to answer what is, perhaps, the most interesting question raised by Bunyan's art: how comes it that so great a realist uses the form of allegory, and uses it triumphantly; and what is the essential nature of the allegoric vision of life? The bibliography of this chapter is curiously deficient in its list of authorities. Mr. Hale White's study of Bunyan in the "Literary Lives" series does not appear, nor is there any mention of Richard Heath's interesting article, "An Archetype of the Pilgrim's Progress," *Contemporary Review*, October 1896, which suggests, with a good array of apt illustration, that the story of Christian's pilgrimage has its parallel, and perhaps its actual basis, in traditions and records of the wanderings of the Anabaptists in search of their city of refuge.

But we tend perhaps to demand more than we ought reasonably to expect from a composite and inevitably condensed history. The necessity for severe selection sits hard on many critics, and the effort after comprehensiveness often defeats the principle of full justice to the individual. The volume stands as a scholarly and respectable contribution to the literary history of what must always remain a difficult period.

The Poems of Shelley. Edited by C. D. Locock.
In Two Volumes. (21s. net. Methuen.)

There is no editor's preface to this edition of Shelley's poems, a regrettable omission, as it leaves the reader with no general guide as to the plan pursued by the editor in arrangement of poems, spelling, stops, &c. On the paper wrapper it is stated that the edition is an attempt to combine with a carefully edited text a complete *apparatus criticus* with adequate explanatory notes on all the poems; that a special feature is the citation of parallel passages from Shelley's works and those of his contemporaries; that some worthless juvenile verses are omitted, and some later poems printed which have not yet appeared in any edition. These latter we have not yet been able to discover. As far as we can judge, the editing of the text has been admirably carried out, as also the exhaustive collection of variant readings and citation of parallel passages. And Mr. Locock quotes the opinions of other editors besides his own. The edition is in these ways an extremely valuable one.

The criticism in the notes other than textual varies greatly in value, and cannot bear comparison with Mr. Locock's excellent editing in other directions. Trivial comment (*i.e.*, "The Cloud," lines 17-20, "These lines formed the subject

of a picture in the Royal Academy") or omissions (*i.e.*, "The Cenci," where further reference to the Italian MSS. would have been welcome) occur but rarely. But we cannot help feeling that in some cases the notes are positively misleading and lack critical insight. In the note on "Hellas," Mr. Locock gives it as his opinion that Mrs. Shelley overrated the final chorus. He continues: "The Chorus itself, as Shelley remarks in his notes, is 'indistinct and obscure.'" Shelley's words are "indistinct and obscure, as the event of the living drama whose arrival it foretells." And he goes on to quote the names of Isaiah and Virgil as "my authority and my excuse" for the attempted prophecy. In the note on "Mont Blanc," line 79 (the last line of the passage:

The wilderness has a mysterious tongue
Which teaches awful doubt, or faith so mild,
So solemn, so serene, that man may be,
But for such faith with Nature reconciled).

"the ordinary meaning of the words," says Mr. Locock, "gives a quite possible sense, 'The wilderness teaches doubt in the current beliefs; or, at the most, a faith in them so mild, so undemonstrative, that if a man can only rid himself of these remaining traces of faith, he may be made one with Nature.'"

With this interpretation of "But for such faith," there should be a comma after "faith"; but the interpretation is obviously incorrect. "So undemonstrative" is no more the ordinary meaning of "so solemn, so serene," than "black" is the ordinary meaning of "white"; nor is faith, mild, solemn, and serene, merely a less intense form of awful doubt. The sense of the passage, surely, is akin to Gray's "would awe an atheist into belief, without the help of other argument." The interpretation "Teaches awful doubt, or faith so mild, so solemn, so serene that by such faith alone man may be reconciled to Nature" does no outrage to words, is supported by the alternative MSS. reading "In such a faith," and is in harmony with the context.

On the change of rhythm at the end of "The Sensitive Plant," Mr. Locock adds nothing to the comment he quotes: "Shelley seems to subside into iambs with relief." A more unfortunate description could scarcely have been devised of the subtle rhythmical transition from the swifter lyrical movement of the narrative to the music of the concluding stanzas in which the assured certainty of the thought has something of the solemnity, as well as the triumph, of Milton's "All is best."

Of the lyric, "O World! O Life! O Time!" Mr. Locock says, "The sentiments and diction are to a great extent Wordsworthian." It would be truer to say that they are reminiscent of lines in "Tintern Abbey," and "The Ode." The general sentiment and diction are absolutely un-Wordsworthian. No serious attempt is made to interpret such a poem as "The Vision of Life" or to illuminate the progress of Shelley's thought.

Instead of an editor's preface there is a preface by Mr. Brock. Some illuminating things are said in it; but here again we miss that sure instinct for poetry which distinguished the editing of the Keats volume in the same series. There is crudeness and a certain shallowness of thought, together with a want of careful, considered expression. It is difficult to read seriously a critic who can write: "Other Poets employ (blank verse), because it is nearer to prose, and their difficulty is to distinguish it from prose. Shakespeare and Milton usually do this by elaborate and cunning artifices of language. Only at great moments do they write simply," or "Milton's whole imagination was political." The reader who accepts Mr. Brock as an amateur critic will condone such platitudes as "This music ('Life of Life!') is not a mere jingle of words," or "he always wrote well in verse, whatever the subject might be," and be free to appreciate the occasional flashes of light Mr. Brock throws on his subject.

May we suggest that in a future edition some kind of reference in the notes to paging of the text would be of great convenience to the student, as would also a list of principal editions, such as Hutchinson gives in his edition?

The Glory that was Greece: a Survey of Hellenic Culture and Civilization. By J. C. STOBART, M.A. (30s. net. Sidgwick & Jackson.)

Mr. Stobart in his preface claims, with perfect justice, that with the increasing specialization of our knowledge even of ancient history, it becomes more than ever necessary to present a general survey of the results reached—a survey which will not pretend to add to knowledge, but aim at making the general reader understand what has inspired and given value to the labours of the specialists. The object of this book is to make some such general survey of Hellenic civilization. Its appeal is mainly to the public to whom Greek is unknown, but to whom it may be much to understand the great contributions which Greece made to culture and civilization. To such readers, as Mr. Stobart rightly observes, "Greek art will make the strongest appeal, and Greek thought, so far as it can be communicated by description. They will be interested in social life and private antiquities rather than in diplomatic intrigues and constitutional subtleties." The result is to be "a history of Greece with statues and poems taking the place of wars and treaties."

In such a work illustrations naturally have an important place. Mr. Stobart indeed modestly describes the text as being "intended to explain the pictures." The illustrations are admirably selected and beautifully executed. The book contains illustrations of practically all the really great specimens of Greek art from the Cupbearer of Cnossos to the Venus of Milo. We wish Mr. Stobart had included a photograph of one of the slabs of the balustrade of the Temple of the Wingless Victory on the Acropolis. With that exception there is nothing missing which we can think ought to have been there, and besides the great works of art there are vase paintings, pottery, coins, gems, and photographs of buildings and places all admirably chosen. All that could be done by selection and by beauty and finish of reproduction to make the long development of Greek civilization visible to the eyes has been done.

But Hellenic civilization cannot be understood by pictures alone, and Mr. Stobart has tried in his letterpress to show "the sort of people and the state of mind that produced" these works of art. Any attempt to present a general conspectus is necessarily difficult, and must appeal differently to different minds. The only question that can legitimately be asked is not, "Is this or that omitted?" but, "Would the book give to the general reader the right impression?" One thing should be said at once. Mr. Stobart has all the necessary knowledge. He is obviously acquainted with the important recent work done on all sides of Greek history and, where doctors differ, shows a fine judgment in deciding between them.

The first three chapters of the book seem to us excellent. Mr. Stobart is there dealing with the beginnings of Greek history—with the early poetry and art. The account of Minoan and Aegean culture, of the coming of the northern invaders of the heroic age, and the beginnings of historic Greece, is excellent. The contrast between Sparta and Athens in the third chapter should help to just the right comprehension of what sort of people the Greeks were.

The rest of the book is unsatisfactory. For, when we come to what Mr. Stobart calls the Grand Century, there is so much to be related that any attempt at history in the space Mr. Stobart has allowed himself must result in a mere catalogue. Mr. Stobart, when he came to the fifth century, could only have fulfilled his aim by saying nothing about a great many important facts in Greek history and a great deal about a few. As it is, he has tried to say a little about everything, and the result is only confusing.

Instead of a breathless history of the main events and personages of the fifth and fourth century in which there is little real value, it would have been much better if he had tried to give the reader some insight into the way in which Greek government actually worked or what a Greek society was like. As it is, there is only an enumeration of the faults of Athenian democracy, with no appreciation of the really great achievement in the history of politics that, with all its

faults, it undoubtedly was. A greater omission in the eyes of the present reviewer is that throughout the book there is hardly a mention of Greek science. Neither science nor mathematics nor medicine appears in the index. Yet no one can understand Hellenism who does not realize that the Greeks invented science, and without science Greek philosophy would have been nothing. Mr. Stobart has a little to say about Plato, but it is almost as misleading as it could be. To say that "Perhaps the general English reader will find the simplest exposition of the Platonic theory of ideas in Wordsworth's 'Ode on Intimations of Immortality'" is totally false. The account of Aristotle suffers from the same neglect of science.

One other criticism that must occur to the reader is that Mr. Stobart seems sometimes to have made the mistake of thinking that in order to write intelligibly it is necessary to write bad colloquial English. The frequent recurrence of "sort of" and "of course" is bad enough in conversation; it becomes intolerable in a book. For instance, "They formed a sort of international bureau, a sort of Hague, though not always on the side of peace, for the statesmen of Greece."

A Dictionary of Christian Biography and Literature to the end of the Sixth Century, A.D. With an account of the principal sects. Edited by HENRY WACE, D.D., and WILLIAM C. PIERCE, M.A. In one volume. (Pp. xi, 1028. 21s. net. Murray.)

The editors of the present work have earned the gratitude of students and all who take an intelligent interest in the beginnings of Christian literature and civilization by making so rich a store of material accessible in such a compendious form. The volume is based on the well known larger work, in four volumes, edited by Dr. Wace and the late Dr. William Smith. In its shorter form the range of the work has been reduced from the first eight centuries to the first six, and, at the same time, a number of comparatively unimportant names have been eliminated, thus making the one-volume form possible. But happily the present work has not the faults of the usual abridgment. The articles, so far as they have been reprinted, appear in their original form, without appreciable curtailment. In this way a series of highly important monographs is made widely accessible, e.g. "Clement of Alexandria," by the late Bishop Westcott; "Origen," same writer; "Eusebius," by the late Bishop Lightfoot; "St. Cyprian," by the late Archbishop Benson; "St. Athanasius," &c., by the late Dr. Bright; "Clementine Literature," "Gnosticism," "Marcion," "Teaching of the Twelve (*Didache*)," &c., by the late Dr. Salmon. Of new articles which have been specially written for this edition, the following are noteworthy:—"Augustine," by Dr. Robertson, Bishop of Exeter; and "Nestorian Church," by the Rev. W. A. Wigram, head of the Archbishop's Assyrian Mission. A number of the old articles have also been supplemented and brought up to date. The volume forms an invaluable companion for the student of Church history. Here he has ready to hand a first-rate treatment of any theme in which he may be interested (within the first six Christian centuries), all the great Church Fathers (with the exception of John of Damascus), all the sects that arose, the various items of Early Christian Literature are dealt with, and notices of all persons important for the study of Christianity within the defined period are given. And all this is the work of experts. Both editors and publisher are to be congratulated on the production of so valuable a volume. It will prove indispensable to all serious students of Church history; its very moderate cost ought also to induce a wider circle to possess and study it.

A Primer of Teaching Practice. By J. A. GREEN and C. BIRCH-ENOUGH. (2s. 6d. net. Longmans.)

It is obvious that the authors of this book are well versed in their subject. What they say is well said and well worth saying. Their sound common sense, too, has made them discriminate and shake themselves free of some fallacious, but time-honoured, formulæ of teaching practice. There is a freshness and humanity about the

book which are too rarely found in pedagogical primers. The aim sounds unpretentious—namely, to give "a first survey of the variety of activities which enter into the complex work of class teaching"; but those who have any experience in the matter will know that this preliminary breaking of the ground is perhaps the hardest problem in training. The book supplies an obvious need, and does so most efficiently. Among the newer and most valuable features of the book are the exercises which follow each chapter. They should make the contents of the chapter a real and practical possession. Scattered through the book are many truths—not truisms—which too often escape us. Such, for instance, is the warning against the fetish of eliciting: "not every schoolboy knows what the teacher himself has probably only recently learned." In the chapter on "Inference," we should have been inclined to lay more stress on the force of suggestion, indirect as well as direct. It is an important, yet often unrecognized, factor in children's inferences. A tone of voice, a slightly misplaced emphasis, frequently account for the surprising inferences with which children sometimes confront the teacher. This, however, is quite a minor criticism. We note that, in quotation, Mr. MacChoakumchild has inadvertently lost his "Mac," and "not every student knows" that the word Tommy really wanted was "hantle."

The Teacher's Encyclopedia. Vol. III. (Caxton Publishing Co.)

This encyclopedia improves as it progresses, and of the ten articles in this volume two or three are contributions of permanent value, and there is none that we should reject for style or matter. Dr. Percy Nunn comes first with a weighty article on Mathematics in the Elementary School. Mathematics in the school teach not their own use (in Bacon's phrase), and interest in the subject must be evoked by showing the pupil their application to the common needs of life. Such is the thesis expounded in practice. Mr. Storr and Dr. Rouse follow with articles on the Teaching of Modern Languages and Classics. Mr. Storr holds the scales balanced between the old and the new method, and will probably content neither party. Dr. Rouse's doctrine is too well known to need comment. Dr. Macnair, H.M.I., Dr. Malcolm Laurie, and Mr. T. J. Millar treat respectively of Physics and Chemistry, Botany, Biology and Geology, and Classical subjects. Each of the three is an expert in his own subject. Miss Burstall handles, with judicious brevity, the thorny subject of co-education. Her conclusion is that mixed schools will flourish in the country, but are not suited for the town. Thirty pages are allotted to Mrs. Ogilvie Gordon, the apostle of school employment bureaux. Many of our readers will have heard her, and we cannot pay her a higher complement than by saying that her pen is as ready and persuasive as her tongue, but the length of the article does seem to us out of proportion. Mr. Ballinger, the Librarian of the National Library of Wales, discusses School Libraries—their formation, upkeep, management, and uses. This is a thoroughly practical article; but it was a bold and not altogether successful venture to add a selected list of books. No one wants a list of Shakespeare plays or Waverley novels, and we could fill a page off-hand with notable classics. Lastly, Mr. J. Edward Graham, K.C., supplies a chapter on The Child and the Law. Let us hope that he will write a sequel on The Schoolmaster and the Law. The illustrations are fewer, better, and more apposite.

The Philosophical Works of Descartes. Rendered into English by ELIZABETH HALDANE, LL.D., and A. R. T. ROSS, M.A., LL.D. Phil. In two volumes. Vol. I. (ix, 452 pp. 10s. 6d. net. Cambridge University Press.)

The aim of this edition, says the preface, "is to present to English readers all the philosophical works of Descartes which were originally intended for publication." The contents of this first volume are Rules for the Direction of the Mind, the Discourse on Method, the Meditations, part of the Principles, the Search after Truth, the Passions of the Soul. The first and the last of these are not elsewhere accessible in English. It is a great gain to have the first in English, for although the Discourse on Method is the most famous of Descartes' writings, the Rules really give a much better impression of the characteristics of Descartes' method, with its insistence on clearness and simplicity. The translation reads excellently and seems, so far as we have tested it, accurate. The translators propose in the second volume to publish the Objections to the Meditations along with Descartes' replies, which will form a most valuable supplement to the present volume.

The Lysistrata of Aristophanes. Edited by B. B. ROGERS. (10s. 6d. G. Bell.)

There are three Greek writers any one of whom is worth living with: Plato, Sophocles, and Aristophanes. Mr. Rogers chose long for the companionship of Aristophanes—to the enriching of his life and to the adornment of his age. The "Lysistrata" reveals the genius of Aristophanes in the clearest light, his gay wit and exuberant fancy have here full play, and instead of the acrid partisan-

ship of the early comedies we have a genial Panhellenism pervading the conception of the plot. Mr. Rogers justly regrets that the noble sentiments and poetic beauty of the "Lysistrata" should be joined with so much of the phallus-element. The play was not written *virginibus puerisque*, and they must do without it. Better to leave it alone than to read it in Holden's edition. On the other hand, scholars will be delighted to have, for the study of it, the guidance of an editor who possesses that for which no learning is a substitute—a feeling for his author got by long and closest intimacy.

The translation, of course not literal in all places, is that published in 1878. If it were necessary to give a sample of it, we might select the rendering of 1279 1294 ("Now for the Chorus, the Graces, the minstrelsy," &c.); but our readers will already be carrying samples of Mr. Rogers in the memory. It is the commentary that is new. Some might deem it too full; others will be pleased to find the editor pouring out his stores so freely. We saw few points on which we were inclined to differ with him. In 114 we feel sure that he is wrong in still interpreting *καταθείσαν* "throwing down"; to "pawn and drink the shawl" was doubtless as common an operation in Athens as it is in London, and by what better Greek could it be described than *τοῦτο κικλόν καταθείσαν ἐκπίειν*? As to the feminine dual form *τά* in 229 Mr. Rogers must have his way; but with Meisterhans' "Grammatik der attischen Inschriften," page 123, note 1113, open before us we should hesitate. In 1183 the conjecture *ἔως* (not mentioned) might perhaps have had the preference over *ὅπως* (see now Stahl, "Kritisch-historische Syntax des griechischen Verbums," page 475). And we should have liked to find the passage 1216 1224 rehandled, so that *ὅας κατακαίωσιν* and *κακίσσασθε τὰς τριχὰς μακρά* were given to the same speaker. But we are not minded to look for faults in Mr. Rogers' work or to argue with him. Our feeling towards him is that of gratitude. No grammarians, no commentators, no archaeological discoveries can make him forget that Aristophanes was a poet. His books have been a contribution to literature as well as an aid and an inspiration in the scholarly study of Greek.

Calculus made Easy. By F. R. S. (2s. net. Macmillan.)

"F. R. S." has a spite against the "professional mathematician," and rushes off to the man in the street to tell him in his own colloquial and inelegant language what fools they are and how easy is the calculus about which they are so pompous and mysterious. Ignoring the animus, we should have been glad to welcome a calculus made easy; but, however elementary, the work should be sound as far as it goes, and this is just where "F. R. S." sometimes fails us. To give one example, if $\frac{dy}{dx}$ is written $\frac{dy}{dx}$ and $\frac{d}{dx}$

is not treated as a symbol of operation, $\frac{d^2y}{dx^2}$ must be puzzling

surely, and further difficulties arise in integration which are not removed by a spacious foot-note on page 126. There is really much that is good in the book. We wish "F. R. S." had "slept on" it and not dashed it off, to all appearance, in a fine frenzy. What subtle irony has placed at the end of the book the advertisement of no less than ten works on the calculus by "professional mathematicians"?

A School Calculus. By A. M. and J. D. McNEILE. (7s. 6d. Murray.)

This book is primarily intended for army candidates, but we quite agree with the authors in thinking that it will be of general use in giving a first groundwork in the calculus and its application. The book opens with two valuable chapters on graphs, and then, after dealing with the main principles of differentiation and integration, considers common curves, plane areas and lengths of arcs, volumes, surfaces, maxima and minima; and then the application of the calculus in simple mechanics. The whole is a thoroughly careful and sound piece of work, and should do much to dispel the idea that it is impossible to attempt the calculus early. Many a college student has regretted his late introduction to the calculus, and, for our part, we are on the side of those who would begin it early. It can easily be seen that such a course assumes no great amount of previous mathematical knowledge.

Wits and their Humours. By the Rev. J. O. BEVAN. (Allen.)

The preface proves the compiler of these anecdotes to be himself a born humorist. One or two or more, he confesses, may be found elsewhere, but, in case the gentle reader should discover such, he is begged, in the cause of truth, to assume that these are copied from the author. Chestnuts are excellent things, especially as stuffing for the Christmas turkey; but we should not like to depend for our dessert on Mr. Bevan's nuts. "An umbrella: a shelter for one, a shower-bath for two. A pedant: one who has got rid of his brains to make room for his learning. Orthodoxy is my doxy, heterodoxy, the other person's doxy. Memory: the thing one always forgets with. What is majesty robbed of its

externals? A jest." We quote the first five. We are not complaining, since to our taste the chestnuts are far better than the nuts, one or two or more of which are hollow. But it is carrying the joke too far when the author misquotes or misfathers a joke, as, on the second page, Voltaire's definition of etymology and Sydney Smith's "flashes of silence."

"Everyman's Library."—*Autobiography of Edward Gibbon*.

Introduction by OLIPHANT SMEATON. (1s. net. Dent.)

We select for notice this particular volume for two reasons. First and foremost, we wish to call attention to a classic now offered in a form that leaves nothing to be desired, at a price that the poorest of readers can command. Secondly, we wish to enter a mild protest against the slovenly way in which it has been edited. Mr. Smeaton's introduction is short and superficial, and it is strange that an admirer of Gibbon, as he professes himself, should end his summary with the charge of "hypocritical insincerity." Birkbeck Hill's edition is overloaded with notes. The notes in this edition are rare and mostly translations of the Latin and French in the text—we had almost written mistranslations. "Artis Clypearis" (page 11): "the art of defence"—read "heraldry." "Virgilium vidi tantum" (page 77): "I saw Virgil only." "Docte sermones utriusque linguae" (page 100): "his learned addresses in both languages." "Largior hic aether" (page 132): "the air is more enlarged." "La colère le troubloit de plus en plus" (page 149): "choler affected the latter even more noticeably." "Saepius noster titubatur atque hallucinatur" (page 175): "then, forsooth, our author more repeatedly errs and falls into solecisms"—read "Gibbon often stumbles and goes astray." These specimens may suffice to prove our charge.

At the Back of Things. By HUGH B. CHAPMAN. (5s. net. Duckworth.)

Twenty-four sermons on proverbs preached to the people of Samaria; or, in plain English, non-dogmatic discourses on Christian ethics. We have all in our time written or looked over essays on a common proverb, and know how hard it is to avoid the commonplace. We cannot say that the author succeeds in his attempt to deal with the springs of human conduct, to strip the bark and get at the kernel of truth embodied in the proverb. To take the first text, "Where there's a will there's a way" (we should not call it an aphorism), is it a fact that "each man is weaving his own character and can eventuate precisely as he pleases"? Was not Sir Francis Galton nearer the mark when he pronounced that Nature has thrice the force of nurture? One more quotation may serve as a specimen of style. "Our last lesson from the proverb should be to aim at some special star, and not at the Milky Way. The latter endeavour is eminently unsatisfactory, and the undefined darer slips into the dreamer before he is aware. Too often he slips into theology or some abstract good, which warrants respect, but does not accomplish much." When the author continues, "Jesus was bending His bow and pluming His arrows for teneleveths of His passage on earth," he is definite enough; but has he not slipped into theology?

The Heroes of England. Edited by JOHN G. EDGAR. (2s. Blackie.)

The sub-title limits "Heroes" to "Warriors by Land and Sea," and we have the lives of eighteen captains and commanders, ranging from the Black Prince down to Sir Henry Havelock. The stories are simply told, without rhetoric or moralizing.

Gardens shown to the Children. By JANET H. KELMAN and OLIVE ALLEN. Described by J. A. HENDERSON. Thirty-two coloured plates. (2s. 6d. net. Jack.)

This is one of those children's books that will appeal more to grown-ups than to children. It gives directions for planning, planting, and tending a modest country garden, and the coloured illustrations of the commonest flowers are very effective. But it is not till we are three-quarters through the book that we come to children's gardens, and the two examples given are too individual to serve as types.

"The Mother Books."—2, *Dolls, Dead and Alive*. By OTTO ERNST. Translated by A. C. CATON. (1s. net. A. C. Caton.)

The object of this series, as explained in No. 1, is to help parents to explain to their children the mystery of birth. This charming little story by the author of "Jugend von Heute" hardly fulfils the promise, as the problem is only glanced at in passing and deferred to a riper age; but, as a study in *die Seele des Mädchens*, the booklet, in its dainty dress, will commend itself to mothers.

Hazell's Annual, 1912. (3s. 6d. net.)

For years "Hazell's Annual" has established itself as indispensable, but we wonder more use is not made of it in schools. Complaints of schoolboys' ignorance as to current politics and world movements would be less rife if they were examined in such articles as "Morocco," "Home Rule," "Insurance." The article

"Newspapers" needs revision. Under "London Weeklies" we find *Education* and *Fruit Grower* and miss *Schoolmaster*, *Church Times*, and *Builder*. Monthlies, too, might well be added. Under "Careers for Boys" we read:—"Schoolmaster: the training in this case is similar to that of preparation for the Church, already described, except that there is no need for the student to go to a theological college. Many men take Holy Orders because a clergyman has a better chance of obtaining many excellent positions than a layman"; and, turning back to "The Churches":—"The stipend attached to a college education is not considered so necessary, and, when obtained, costs less." The last sentence belies the motto of "Hazell's Annual," "Avaunt, Perplexity!" and though there may still be sons of Eli in the Church of England, the stigma on a noble profession is unmerited.

Who's Who, 1912. (10s. net. Black.)

This year's issue contains in rough figures 24,000 biographies and 2,400 pages, giving an average of fifteen lines to each notice. Inclusion in "Who's Who" is a distinction of a kind, a sifting of the somebodies from the nobodies, and the editor has fulfilled most judiciously his invidious task. If only as a Directory, the work is indispensable.

Messrs. Cassell send us a selection of *Letts's Diaries* for 1912. We recommend, for the waistcoat pocket, No. 69, leather, 1s.; for side pocket, No. 30, leather, back-loop, 1s. 6d. net; and for desk, No. 35, 1s.

GEOGRAPHIES.

The Nations of the Modern World. By H. J. MACKINDER. (2s. Philips.)

This volume—the fourth, and last, of Mr. Mackinder's well known series of "Elementary Studies in Geography"—deals more definitely than the preceding ones with historical facts, but the intimate relations between history and geography are indicated throughout. Part I is concerned with the nations dwelling along the borders of the Narrow Seas, and with their conflicts, both in the Old World and in the New. Part II explains the changes in the map of Europe during the nineteenth century. In Part III it is shown how the expansion of Britain beyond the seas was made possible by the victory of Trafalgar, and necessary by the industrial revolution. Part IV traces the growth of Germany, France, and the United States as rivals to the commercial supremacy of Britain; while Part V reviews the self-governing Britains across the seas. The definite aim of the series is to send the pupil of the elementary school out into the world with some definite preparation for efficient citizenship. "The danger [of democracy] lies in the power which it gives to those who cast their votes for selfish and short-sighted reasons. The British Empire . . . can endure on one condition only, that British citizens struggle to take broad views and are public spirited." These are the closing words of the book, in which "the pupil is asked to visualize with a single grasp our whole world of varied and incessant change."

Philips's Chamber of Commerce Atlas. (6s. net.)

This atlas and gazetteer is designed specially for the "business man," but it should find a place in the school reference library, and the "uncommercial traveller" will find in it just the sort of information that he wants. The innumerable facts recorded are taken from the latest official sources, and the execution of the maps leaves little to be desired. Sources of supply, markets, volume of trade, resources, and communications are among the principal subjects dealt with.

"The Oxford Geographies."—(1) *Ireland*. By O. J. R. HOWARTH. (2s. 6d.) (2) *Australia, Physiographic and Economic*. By GRIFFITH TAYLOR. (3s. 6d.) (Clarendon Press.)

(1) As each school becomes more free to draw up the syllabus upon which the pupils are to be examined, it is increasingly possible for the higher forms to study a limited area in considerable detail. These two text-books, although open to criticism in some respects, will be found very suitable for such studies. Mr. Howarth, in dealing with Ireland, suggests that, being an island, it is a self-contained unit. But this is hardly the case, and the chapter on Structure, in particular, loses much by the absence of any correlation between the structural elements of Ireland and of Great Britain. The section on page 37 needs rewording, for it leaves the reader under the impression that the granite masses of the Mourne mountains are of post-carboniferous date. A series of interesting maps is given, showing the distribution and movement of population; but the parts shown are somewhat scantily treated in the text. Much of the space devoted to a rather tedious description of topographical details might, with advantage, have been employed in giving a closer analysis of the changing economic conditions which explain these maps.

(2) Mr. Taylor, himself an Australian, writes of his country from the standpoint of a geologist who has realized his subject as one of the bases of scientific geography. The connexion between rock

structure and soil and mineral deposits is fairly obvious, but less so is the sequence—geology, topography, climate, vegetation, industries—which is here worked out in some detail, especially for New South Wales. The treatment of the economic resources of Australia is not meant to be exhaustive, but chapters are assigned to such topics as Artesian Water, Irrigation in Victoria, Cattle, Wool, Metal Mining, Coal, the Copra Industry, and so forth, full use being made of the latest official reports and statistics. Not the least interesting section is that headed "Forecast," wherein Mr. Taylor (who does not agree with the White Australia policy) estimates the areas capable of extensive settlement by white and coloured people respectively. Owing to his departure for the Antarctic with Captain Scott's expedition, the author was unable to revise the final proofs of his book, and to this fact we may ascribe the entire lack of correspondence between the map and the text in the chapter on Vegetation.

A Handbook of Geography. By A. J. HERBERTSON. Vol. I: *General Geography, the British Isles and Europe.* (4s. 6d. Nelson.)

This is a handbook for students, intended to bridge the gap between the school text-book and such larger reference books as Dr. Mills' "International Geography." The sections upon Geodynamics and Geomorphology are so condensed as to be difficult to follow, but they will prove useful as summaries to those who have already a fairly wide knowledge of these subjects. They are followed by sections on General Physical Geography and Biogeography, both of which are illustrated by a number of world maps, but again their brevity renders them rather suggestive than instructive. More than two-thirds of the volume is devoted to Regional Geography, and here the close analysis of topographical and morphological details renders the use of a first-class atlas essential, but special points are illustrated by very clear sketch maps. Under the head of the separate countries economic conditions are very fully dealt with, and historical geography also receives attention, but we regret the scanty treatment of climate. This is a subject in which the average student is poorly equipped, owing to the unreliability of elementary text-books, and we should welcome from Prof. Herbertson a regional handbook which would also bridge the gap between these and Dr. Julius Hann's classic volumes.

The Highlands of South-west Surrey. By E. C. MATTHEWS. With Maps. (3s. 6d. Black.)

This is the second of the Geographical Studies issued in connexion with the London School of Economics, the first being Miss Ellen Smith's monograph on the Reigate district. Miss Matthews has studied her region from the point of view of vegetation, but she realizes that the key to the plant life of a region is the rock structure, which determines the topography and soils, and hence the distribution of rainfall and of soil moisture; hence the sub-title of her essay, "A Geographical Study in Sand and Clay." Her statements answer Prof. W. M. Davis's tests of geographical quality, for they clearly demonstrate "some relation between an element of inorganic control and one of organic response." These two monographs should be carefully studied by teachers and others who wish to make an effective study of local geography.

Text-book of Geography. By G. CECIL FRY. (4s. 6d. University Tutorial Press.)

This is not intended for a class book, but it may be of great service to the pupil revising his work for an examination. The book itself needs revision, which it will doubtless receive in a second edition; for instance, the inaccurate diagram in Figure 57, and the text and maps dealing with the monsoons of Asia. In the reviewer's copy the colour printing is imperfect, the error in the register often exceeding a quarter of an inch. A misprint frequently met with elsewhere is seen in Figure 60.

The Home of Man. Part I.—The British Isles. By W. C. BROWN and P. H. JOHNSON.

With the authors' standpoint that topography shall be taught in connexion with geological structure, and that the more densely populated areas (in this case the coal-fields) should receive the fullest treatment, we are in complete agreement; and we can highly commend the clear, well set type and the many interesting photographs to be found in this book. But we cannot recommend it to teachers unless they are already better equipped than the authors to deal with the question of structure. Patches of chalk are *not* to be found scattered over the London clay, the chalk is not "recent or tertiary" (sic), nor are "the rocks between the oolite and the coal" all secondary (pages 50 and 51). It is quite misleading, in the case of a country once heavily glaciated, to enumerate the rock strata and say that "these are the chief soils." Neither the Cotswold Hills (page 100) nor the Cheddar Cliffs (page 229) are of chalk. The determination of the area of the *outcrop* of the coal measures gives a less result in those cases where the carboniferous series dips

under younger rocks, and, where coal is mined, far beyond the limits shown on the map; and in this connexion the excessive dip shown in the diagram (Fig. 63) is very misleading. Nor are the chapters on climate much more reliable. There is no mention, for instance, of the fact that temperature observations are reduced to sea-level before the isotherms are plotted. We have said enough to show that this is a book to be used with caution.

A BATCH OF GERMAN BOOKS.

To get the mind into a German mood read a little in E. F. Henderson's "Blucher" (5s. net, Putnam's "Heroes of the Nations" series), or in that shilling's worth of delight, Josef Viktor von Scheffel's "Ekkehard," as translated in "Everyman's Library" (Dent). Then perpend this list of German educational books, into which we will admit nothing that may not be used with confidence and profit in school or lecture-room. We place the books, so far as possible, in the order of their difficulty.

(1) *Arnold's Modern German Course.* By F. W. WILSON. (3s. 6d. Edward Arnold.)—The author, an assistant master, once at a *Realgymnasium* in Saxony, now at Clifton, has written a well planned, practical book for those who are beginning German at thirteen or fourteen years of age. He leads off with short stories, which are followed by a sufficiency of grammar, and by exercises and retranslations. The accuracy of the details shows that Mr. Wilson has a very sound knowledge of German. We note briefly: *Der Rheingau* is rightly given; but we have often heard *das* in the Rheingau. Under § 128 the difference between *darin* and *darin* might have been stated. *Gesünder* is as correct as *gesunder* (page 121). The distinction between *herum* and *umher* is inadequately expressed; cf. Engelen, "Grammatik der neuhochdeutschen Sprache" 1883, page 275. Dr. Wilson teaches *w* as dento-labial; we should prefer to teach it as bilabial.

(2) *Gerstaecker's Gernmelshausen.* Edited by D. L. SAVORY. (1s. 6d., Rivingtons.)—Prof. Savory's little work, one of Rivingtons' "Direct Method Easy German Texts," and in German throughout, needs no recommendation. When only German is used it is hard to explain particles. We read: *der Wein floss nur so = der Wein floss in Strömen*; it would help a boy if he were told that *nur* so is his own "fairly."

(3) *Schubert's Peterl.* By LUISE DELP. (1s. 6d.) (4) *Spyri's Was der Grossmutter Lehre bewirkt.* By SARAH T. BARROWS. (9d.) (5) *Frommel's Mit Ränzel und Wanderstab.* By W. BERNHARDT. (1s. 6d.)—These are "numbers" in Heath's or Harrap's "Modern Language Series." In (3) *Achsel* is rendered "arm-pit," which is *Achselgrube* or *Achselhöhle*; *die Achsel*, properly the angle that the arm makes with the body, is often used for "shoulder." *Er fasste sie unter beiden Achseln* = "he caught her under the arms." The vocabulary of (4) gives "thoughtful" for *bedächtig*, which may serve at times; but "deliberate" is a useful equivalent to remember. No. (5) should not be overlooked by the teacher who loves the Black Forest, a ramble through which by schoolboys forms the subject of the book. Admirable notes of the explanatory sort are given, but *Affentaler* ought not to be described as claret. The three books are all good.

(6) *Fulda's Der Talisman.* By O. MANTHA-ZORN. (2s. Ginn.)—Concise notes are followed by German questions on the matter of the play. The introduction touches on modern politics in a way that might interest a "First Set Modern." The German is elegant and not difficult.

(7) *Konrad Meyer's Jürg Jenatsch.* By W. AHRENS. (2s. 6d. Macmillan.)—This is a "Siepmann's Advanced German Series" book (Key by the General Editor, 2s. 6d. net), and the standard of scholarship reached in it is high. Mr. Ahrens tells his readers much that is not contained in ordinary school books; he gives, for example, the official rule for resolving *ck* into *k-k* in the division of syllables, and some useful etymologies. But why does he call Tirol "the Tyrol"? In the phrase *es kommt mich (or mir) hart an*, if *mich* is older and more correct, *mir* is now the preponderating usage. The text being presented in a shortened form, the story could be read in a term.

(8) *Personal and Social German Letter-Writer.* By F. FRANK. Revised by J. C. H. SCHAFHAUSEN. (Wrapper, 1s.; Cloth, 1s. 6d. Marlborough.)—We know no better collection of model letters than this. Specimen letters by classical authors have been added to illustrate German prose in the epistolary style. The publishers supply a key. Both for continuation classes and for schools the book will have high value.

(9) *Outlines of the History of German Literature.* By J. G. ROBERTSON. (3s. 6d. net. Blackwood.)—Prof. Robertson now follows his "History of German Literature" with a shorter treatise, gaining space by treating the minor writers briefly. The one fault we have to find with it is that the matter has not been brought quite up to date. Sudermann's "Die indische Liebe," Ac., is not

mentioned, and Gustav Frenssen is named as the author only of "Jörn Uhl" (1901).

CHEMISTRY.

Theoretical Chemistry. By PROF. WALTER NERNST. Translated by H. T. TIZARD. (Pp. 810, xix. 15s. net. Macmillan.)

This is a new edition of the translation of Prof. Nernst's great work on Theoretical Chemistry, and contains much new matter which brings the book quite up to date. This book is a consideration of Physical Chemistry from the standpoint (as stated in the sub-title) of Avogadro's Rule and of Thermodynamics. It shows that Physics and Chemistry have no line of demarkation between them, and the modern physicist is of necessity as much a chemist as the chemist is a physicist. Prof. Nernst, after an introduction, considers Physical Chemistry in four Books. In Book I he discusses the universal properties of matter, the various states of aggregation and the phenomena of solution. In Book II he considers atoms and molecules, in which the atomic theory, kinetic theory, and various aspects of the molecular theory are reviewed, and in this Book a chapter on Radioactivity is introduced in this edition. The Third Book considers the transformation of matter, chemical statics and kinetics. The Fourth Book contains chapters on the transformations of energy, being considerations of thermochemistry, electrochemistry, and photochemistry. The book is completed by a full Index of authors and of subjects. This book standardizes, as it were, the theories of Physical Chemistry, and thus opens a limitless field for the continuation of the steady research which inevitably follows the announcement of all new theories. It is invaluable both to the chemist and to the physicist.

Inorganic Chemistry. By W. M. HOOTON, M.Sc., M.A., &c. (Pp. 408, viii. 3s. 6d. net. Edward Arnold.)

This book is one admirably suitable for the upper forms of secondary schools. It contains all that is needful for a sound knowledge of the principles of chemistry, and, moreover, it does not presuppose (as is the wont with too many school books) the possession of that elusive quality, the scientific mind. Here the student is led gradually into the path he should follow; he is not bewildered at the outset by scientific terms, but he is conducted from the consideration of quite simple properties to those of a different calibre—namely, the molecular theory and reduction and oxidation. His progress is helped in a truly remarkable manner, here by an experiment, there by a diagram, and again by suitable examples. The author has produced an excellent text-book, in which is embodied the experience of many years. A feature of the book is the summary at the end of every chapter, which, together with the copious examples and questions, gives invaluable help to the student working for examinations. The style is clear and lucid, and the diagrams are excellent. These points, together with the full index, an appendix of useful data and answers to questions, commend this book to the favourable notice of all students who are preparing for the Matriculation or Army Entrance Examinations, the syllabuses of which it amply covers.

Applied Electrochemistry. By M. DE KAY THOMPSON, Ph.D. (Pp. 329, xii. 9s. net. Macmillan.)

This book is a valuable contribution to the literature of chemical technology, and its value is enhanced because it deals with a branch of applied chemistry which is rapidly becoming of enormous commercial importance. Electricity is every day coming to the front in manufacturing operations, and this up-to-date treatise on the joint application of chemistry and electricity to commercial undertakings is issued at a most opportune moment. The plan followed in this book in each chapter is to give first a discussion of the theory of the operation under consideration, and then to give details of the technical applications of the theory. By far the greater part of the book is taken up by the consideration of purely commercial applications of electrochemistry, but there are several chapters in which the use of electrochemistry in the laboratory is discussed. For example, there are chapters on Voltameters, Electrochemical Analysis, Electrolytic Reduction, and Oxidation, giving the applications of electrochemistry in the laboratory. The remainder of the book consists of chapters on Electroplating, Winning and Refining of Metals in Aqueous Solution, Production of Alkali Salts by Electrolysis, Primary Cells, the Electric Furnace, the Electrometallurgy of Iron and Steel, and the Production of Ozone. This recital of the contents of the book shows that no aspect of electrochemistry has been neglected. The book is well written and the value of the text is increased by numerous references to original papers, by many clear diagrams, and by the inclusion of a large number of photographs of actual electrochemical plant. A copious index and an appendix of electrochemical constants bring this book well up to the standard of the modern technical treatise. This book should be consulted first by the engineer, since it shows

how important a part electricity plays in modern manufacture, and, secondly, by the chemist, since it gives information of the application of his science to industry in a host of fascinating ways.

SCIENCE.

College Physics. By J. O. REED and K. E. GUTHE. (12s. net. Macmillan.)

This book attempts to deal with the whole range of physics up to a standard somewhere between the Intermediate and Final pass examinations of London University. The arrangement and selection of the topics are good—the arrangement markedly so. But it is impossible to treat so wide a range of subject-matter with any thoroughness within the compass of six hundred and twenty pages. Nevertheless, the book might prove very useful as giving the framework of the subject, the teacher expanding the treatment of all those topics of which he desired the pupils to have a sound working knowledge. Such a method of using the book would be assisted by the useful collections of problems at the end of certain chapters, the good index, and highly satisfactory sequence of subjects. As the standard of school physics in the United States is far below that to which we are accustomed in this country, it is probable that the authors have provided a manual which contains as much as the average college student can cope with during their course at the University of Michigan, in which the authors are professors. We may add that the book has few errors, although we notice that the usual schoolboy mistake as to the tension of string has been perpetrated in the paragraph (page 26) on "Atwood's" Machine. As usual, the siphon is treated statically; it is necessary for students to consult a work on hydraulic engineering if they wish to know anything about siphons. The later and more advanced chapters are as good as the limits of space will allow, and a commendable feature (which might more often be found in books written in this country) is the frequent reference to original memoirs.

Elementary Experimental Science. By W. T. COUGH and A. E. DUNSTAN. (2s. 6d. Methuen.)

This book has now reached a tenth edition, and in this issue improvements have been made, chiefly by deleting the old papers and inserting new ones. With the new matter, the work is fairly up to date. One adverse comment must be made—viz. much use is made of quite small type. In other respects—the arrangement of the exercises, indexing, &c.—the book is most workmanlike.

Senior Heat. By R. W. STEWART and J. SATTERLY. (3s. University Tutorial Press.)

This book is one of a series specially written to meet the requirements of the Cambridge Senior Local Examination. Like other works of the series, the information is accurate and up to date, and the difficulties are faced and explained. The explanations sometimes suffer from over-compression, but the book can be recommended for use wherever a teacher can supplement the direction and description of the experiments. The earlier chapters are practically the same as those in the "New Matriculation Heat" by the same authors.

"Dent's Scientific Primers."—*Physiology.*

By W. D. HALLIBURTON. (1s.)

Dr. Halliburton gives a clear, though condensed, account of such portions of the subject as can conveniently be studied in the classroom. Difficulties are often made clear by an extensive and clever use of analogy, the section devoted to the nervous system being especially well written. One can depend upon the accuracy and up-to-date character of the information, and the only reason for hesitation in giving the primer unreserved praise is the pernicious glazing of the paper. We hope the publishers will remove this defect in subsequent issues of this and other books of this cheap and handy series.

First Book of Zoology. By T. H. BURLEND. (1s. 6d. Macmillan.)

Amid the large number of Nature study books published recently some stand out by reason of the absence of gush and the presence of information which is really wanted. Mr. Burlend's little book tells us about the life of selected common animals, from the earthworm and the gnat to the pig and the sparrow. The information given is just what is wanted; it is given clearly, and there is an amazing amount put into a small space without any sacrifice of clearness. There are over a hundred clear and helpful illustrations, and the book reflects credit on author and publisher, the coloured plates being beautiful as well as serviceable.

Weather Science. By F. W. HENKEL. (6s. net. Fisher Unwin.) Many people are interested in the subject of the weather not only by reason of the influence of meteorological conditions on their daily pursuits, but also because they feel the prompting of that curiosity to know "how it works" which frequently is the forerunner of true scientific interest. This book will probably appeal to adults who are thus attracted to the problems of weather

science, but we do not think that boys or girls would be stimulated much by receiving a copy as a present. The arrangement of topics is not sufficiently planned beforehand; it has the discursiveness of the semi-prepared lesson. Moreover, on matters of detail there are several statements which lack precision or are positively erroneous. A teacher who already has a good knowledge of the subject will find several interesting references, quotations, and notes of historical incidents—in fact, a collection of meteorological information from which he may extract fresh illustrative material for lessons on clouds, &c. On account of its inaccuracy it cannot be wisely introduced into the school library. The description of ozone in the concluding pages will perhaps show the want of clear thinking to which we object. We are told that ozone is compressed oxygen, three molecules occupying the space of two in common oxygen. Moreover, the old beliefs as to the occurrence of ozone are given without any hint of the fact that most modern chemists have ceased to hold them. The book is nicely printed on stout paper.

Elementary Light. By W. H. TOPHAM. (2s. 6d. Arnold.)

The arrangement of matter in this book strikes one very favourably. The instructions for the laboratory work are collected at the end of each chapter so that the descriptive text may be read without interruption. An excellent selection of test questions is provided, and these include a large number of practical exercises which have been set at various examinations. The teacher will find amongst them many useful suggestions of laboratory problems for those boys who have already done the usual experiments. The book is excellently printed, the diagrams are particularly good, and the work as a whole can be confidently recommended. A slip appears on page 61, where it is stated that the image produced by a concave mirror is subject to chromatic aberration effects. It only remains to be said that the book is about up to the standard of the Intermediate Examination in Science, and will be found useful for students who are preparing for the London Matriculation, Oxford and Cambridge School Certificate, Woolwich, Sandhurst, and the Indian Police.

The Life of Crustacea. By W. T. CALMAN. (6s. Methuen.)

Although the subject of this book is not likely to appeal strongly to the general reading public, yet there are doubtless many who, without being zoologists, are genuinely interested in the life and habits of various members of the crustacea. The inquiring reader who comes to this book for information will find an excellent account of the group, written in language as little technical as possible and illustrated admirably with well over a hundred figures. Of these more than thirty are excellent full-plate reproductions of photographs. A description of the lobster, which is chosen as a typical crustacean, is given at the outset, and this is followed by chapters on the metamorphosis of crustacea, on the crustacea of the seashore and the deep sea, on floating crustacea of the open sea, on freshwater crustacea, and on land and parasitic crustacea. The closing chapters deal with the relationship of the group to man and with fossil crustacea.

UNIVERSITIES AND SCHOOLS.

EAST LONDON COLLEGE.

The Drapers' Company offer the following scholarships of £40 per annum, tenable for three years, to be awarded on the result of the London Inter Collegiate Scholarships Examination, 1912—viz. four Science and two Arts scholarships for men, and two Science and two Arts scholarships for women. Candidates must not be more than nineteen years of age on May 1, 1912.

Fifty-two students have graduated at the University of London from this college this year (45 internal and 7 external), including ten first classes in the following subjects:—French, Mathematics (3), Chemistry (3), Botany, Engineering (2).

Mr. T. F. Winnall, B.Sc., who proceeded to Magdalen College, Oxford, and was awarded the Mackinnon Research Studentship of the Royal Society last year, has been elected to a Senior Demyslip of Magdalen College, Oxford. Mr. A. B. Grieve, B.A., has been appointed a Lecturer in Mathematics; Mr. L. F. C. Gendle, B.Sc., a Lecturer in Civil and Mechanical Engineering. The Annual Dinner of the Old Students' Association will be held on January 22, at the G. E. R. Liverpool Street Hotel (Abercorn Rooms).

CAMBRIDGE.

The curious prophecy, with which the paragraphs in my last letter dealing with the question of fees, were concluded, has proved sound. It was predicted that the more drastic scheme, whereby men should

pay as undergraduates their eventual fees in case they ever became M.A.'s, would "probably be thrown out." It was thrown out by 252 votes to 203; and the minor change, about which the forecast was a little less certain, was also rejected by 229 votes to 190. The position of the Council is a little peculiar. The last biennial election renewing half the Council, gave that body a "progressive" look. Since then its main schemes have been vigorously rejected by the Senate. Of course, the weekly round of Graces appointing A.B. to be an examiner for Part N of the examination for X, has gone through steadily. But where there has been policy, it has mostly failed. The fact is that the proposed reforms have been in the main dull nothing to win enthusiasm except from people who vote *placet* at all costs, or feel the curious pleasure some seem to have in a mere change of arrangements as such.

There was some interest here in the result of the vote at Oxford on compulsory Greek, for it was rumoured that if Oxford stuck to compulsory Greek, the much-talked-of Commission would be appointed. It might be a Royal Commission, which would inquire indefinitely, or a Parliamentary Commission packed with Labour members and with Mr. Grayson or Mr. Keir Hardie as its chairman—no nightmare was impossible. But now we understand that Mr. Asquith is otherwise occupied, that Parliament will have plenty to do next year and that our destinies are not to be pinned by way of appendix to those of Oxford, even though the *Nation* and other organs of progressive opinion are displeased with compulsory Greek. After all, education does come in, in all these matters; and, if I might address your readers who are responsible for teaching Greek and other things, it all rests with them. Greek is a fruitful subject wherever the teacher does not pinch the buds off the young plant. On the other hand, as a well known scientific man said the other day, you would expect science to be an ideal education, with all its training in observation, and so forth only, he added, the strange thing is, it doesn't seem to educate. It certainly does not, taken by itself, if one is entitled at this point and in this place to give the result of some years of acquaintance with young science men. Nor again, does the much vaunted history school quite seem to achieve all it professes—if one may judge from the vast and sombre erudition of "The Cambridge Modern History," which, by the way, was in part written by Oxford men, an illuminating fact for humble people over here.

This brings me to the University Press, which has been the centre of a small electric disturbance of late. A publication widely advertised as "The Encyclopedia Britannica"—your readers will be lucky people if they have not had $n+1$ advertisements of it already—has been given to the world with (we understand) the peculiar blessing, imprimatur, and sanction of the University of Cambridge; and some people, it is supposed, have fancied that this meant more than that the name of the University Press stood on the title page—that this was wisdom for the million on India paper, not merely printed by our Press, but conceived, digested, written, and edited under the very auspices of her whose emblem is "Hinc lucem et pocula sacra." On the other hand, whatever was supposed, certain purists indicate that it was never categorically affirmed by the Syndics of the Press that they had had anything to do with it before July 1910. It is not for your correspondent to discuss in a short letter to you "the ethics and aesthetics of advertising" which have involved here such confusion of *pocula sacra* and vials of wrath. He may record that when new members of the Press Syndicate were nominated to the Senate—two of them—two or three weeks ago, it was a new pair of names. A protest, which cannot be very private, seeing it reached the *Times* by direct communication, has been made; and that it was so far effective will be grateful to a good many people who felt less and less satisfied, with each fresh flamboyancy of advertising enterprise, to see the name of Cambridge dragged in to sell goods which may be admirable but with which our connexion began in July 1910.

Meantime, a new Secretary to the Press has been appointed, since the retirement of Mr. R. T. Wright, announced perhaps a year ago. Mr. A. R. Waller is well known to those who read Hazlitt. He has had a long and honourable connexion with the editing of English classics, and has of late been joint editor, with the Master of Peterhouse, of the "Cambridge History of English Literature," one of the happier ventures of our Press. It is generally felt that Mr. Waller has fairly won his new place by sound and intelligent service of the Cambridge Press, and the happiest expectations are formed as to what may follow his receiving a larger place in guiding the work of that great institution.

Two events connected with the teaching staff of the University call for notice. The resignation of Dr. Waldstein, who has held the Slade Professorship for a number of years, is not to sever his

The Teaching Staff.

The Financial Reform.

connexion with the University; for he is to stay here or near here, and he hopes still to lecture. He has accompanied his resignation with a generous gift towards a fund for the endowment of chairs or readerships of Anthropology, Egyptology, and the Art History of the Middle Ages, the Renaissance period and Modern Times; and he hopes that others will contribute and make these things actual.

The appointment of Dr. Holland Rose, the historian of Napoleon, to a new Readership in Modern History needs no commendation. Sound learning and high character are associated with Dr. Rose's name, and it is a happy thing that both are to be at the service of our History school.

SCOTLAND.

By an Ordinance of the 1889 Commission, Professors, Lecturers, and Assistants in each of the four Universities were made ineligible for appointment as external examiners in any of the other Scottish Universities. It is difficult to understand the reasons for this prohibition; but it is believed that the Commission desired to satisfy the extra-mural teachers in medicine, who feared that the Universities would give the examinerships to one another's teachers and would thus do injustice to extra-mural lecturers. If the appointments were made by the Senate, there might be some ground for this fear; but the University Court, which appoints, has no interest other than that of securing the most competent men that may be available. The restriction has been a constant source of trouble in other Faculties, and especially in the Faculty of Arts, where there are no extra-mural teachers. In some subjects the methods and range of teaching in Scotland are quite different from those of England and Ireland, and much of the external examiner's work has had to be done by the internal examiners. Scottish graduates are eligible as external examiners; but they are often men who have for some time been engaged in professions having no relation to the subject in which they gained distinction at the University, and if, as often happens, they have had no experience of teaching the subject, they are not good examiners. In the recent Medical Ordinances of Aberdeen and Edinburgh, the restriction was abolished as regards medicine, and the Scots Philosophical Club has asked the Universities to have it removed as regards the Faculty of Arts. St. Andrews University Court has drafted an Ordinance repealing the Ordinance of the 1889 Commission, and the passing of such an Ordinance will be a great boon.

Glasgow University Court has again adjourned its discussion of the proposed inclusive fees, until a report has been received from a further conference of representatives of the four Universities. This further conference was called to consider a proposal from Edinburgh University that the inclusive fee for the Honours degree in Arts should be the same as that for the ordinary degree, provided the degree be taken in three years, and that it should be increased by five guineas for each additional year taken to complete the degree. It is understood that at the Conference all the other Universities were opposed to the Edinburgh proposal and that the Conference accordingly decided to adhere to its former resolution. Mr. Birrell, Lord Rector of Glasgow University, has appointed Col. A. B. Grant, M.V.O., to be his assessor on the University Court, and Prof. Muir has been appointed by the Senate to be an assessor, in succession to Sir Hector Cameron. At a meeting of the Court sympathetic reference was made to the death of Sir Joseph Hooker, who was one of the oldest and most distinguished graduates of the University. He received the degree of M.D. in 1839, when his father was Professor of Botany in the University. The Court resolved that the Commemoration address next June should be on Sir Joseph Hooker, and that Prof. Bowers should be asked to deliver it. The Lord Rector is expected to pay his first visit to the University on February 9, when he will be the chief guest at the annual house dinner of the University Union. The new head-quarters of the Glasgow University Officers' Training Corps will be opened by the Chancellor, Lord Rosebery, on the afternoon of Friday, January 12. Mr. Hugh A. Reyburn, M.A., second assistant in Moral Philosophy at Glasgow University, has been appointed Professor of Philosophy at the South African College, Cape Town.

The Senate of Aberdeen University has appointed Prof. Macdonald to be one of its assessors on the University Court. Mr. F. E. A. Campbell, B.A., Ph.D., has been appointed to the new lectureship in English Language. The late Mr. John Thomson, of Aberdeen University Press, has bequeathed £2,000 to the University for the purpose of endowing a lectureship, in memory of his son, who was a distinguished student of the University. Mr. Thomson has also bequeathed to the University some valuable pictures.

The Curators of patronage at Edinburgh University have announced that the applications of candidates for the chair of mathematics, vacant through the death of Prof. Chrystal, should be lodged

not later than February 8. At a meeting, called by Prof. MacGregor, it was resolved to obtain funds for a memorial to the late Prof. Tait, which it is hoped may take the form of an addition to the staff of the Natural Philosophy department or, if enough money is subscribed, of the establishment of a chair of mathematical physics. The Senate of Edinburgh University has resolved to invite M. Henri Bergson, Professor of Philosophy in the Collège de France, Paris, to be Gifford Lecturer from October 1913 to October 1915. Viscount Haldane has been elected honorary president of the Associated Societies of Edinburgh University, in succession to Lord Hugh Cecil. Prof. Richard Lodge has been appointed Dean of the Faculty of Arts, in succession to the late Prof. Chrystal. Prof. Geikie has presented to the University the geological class library, of nearly 3,000 volumes, formed by himself and his brother, Sir Archibald Geikie.

The question of the decrease in the number of students in training who take a University course was discussed at a recent meeting of the Edinburgh Provincial Committee, and a special sub-committee was appointed to consider the matter in conjunction with the other Provincial Committees. The decrease has arisen mainly from the regulation which practically imposes a four years', instead of a three years', curriculum for students who take their training along with their University course. The new resolution of the Education Department to give grants for four years in the case of University students should simplify, if it does not entirely solve, the problem. The Edinburgh Provincial Committee has approved sketch plans of a new demonstration school, the estimated cost of which is £14,730. The Glasgow Provincial Committee has invited six firms of architects to submit plans in competition for its new training college at Jordanhill. The cost of the new college will probably be about £100,000.

The annual Congress of the Educational Institute of Scotland will be held at the Royal High School, Edinburgh, on January 3 and 4. The president is Dr. Morgan, of the Edinburgh Provincial Training College, and addresses will be given by Sir George Kekewich, Mrs. Humphry Ward, Prof. Darroch, and others.

Dr. Heard, of Fettes College, has been elected President of the Classical Association for the next two years.

At the meeting of the Glasgow and West of Scotland branch of the Teachers' Guild, Emeritus Professor G. G. Ramsay delivered a lecture on "Living and Dead Teaching, Living and Dead Languages," in course of which he contrasted unfavourably the stringent regulations of the Scotch Education Department regarding secondary education with the more generous and liberal methods of the English Department. Whether or not Prof. Ramsay's strictures on the Scotch Department are entirely justified, there is no doubt that the English Education Act has done much more for secondary education than the latest Scottish Act, which was a timid measure and avoided all serious difficulties. It did a good deal for primary education; but it left one to infer that secondary education required little more than the provision of bursaries to enable children to attend central schools. The progress of secondary education in Scotland will not be satisfactory until we can get rid of Parish School Boards, elected by the cumulative vote. Under the present system the Local Authorities are unfit to be trusted with much liberty of action, and the direction of secondary education is thus centralized in the Education Department, with results which must be unsatisfactory, however able the Department may be.

IRELAND.

The winter Conferring of Degrees of Dublin University was held in the Theatre of Trinity College on December 21, when a large number of degrees were conferred, on the results of the examinations of the term just completed. Maynooth College had its degree-giving day on December 10, when Sir Christopher Nixon, Vice-Chancellor of the National University, presided. University College, Dublin, held the inaugural meeting of its Legal and Economic Society on November 29, when the address of the Auditor, Mr. P. O'Toole, M.A., on "Union Finance and Home Rule," drew forth interesting and important speeches from Lord MacDonnell and Mr. A. Samuels, K.C.; and the inaugural meeting of its Literary and Historical Society on December 12, when an address on "The Dawn on the Hills of Ireland," by the Auditor, Mr. John Ronayne, B.A., was followed by speeches from Mr. John Dillon, M.P., and Mr. T. W. Russell, M.P.

Prof. Gilbert Morgan, D.Sc., F.I.C., Assistant Professor in the Imperial College of Science and Technology, London, has been appointed to the Chair of Chemistry in the Royal College of Science for Ireland, rendered vacant by the retirement of Sir Walter Noel Hartley, F.R.S. The Department of Technical Instruction

The
Universities.

Scientific
and Technical
Education.

and Agriculture have appointed Mr. John Ingram, B.E. (R.U.I.) and Mr. W. Gordon Pirrie, M.A., B.Sc. (Aberd.), Junior Inspectors of Technical Education.

In presiding at the annual prize-giving of the City of Dublin Municipal Technical Schools, on December 15, the Lord Mayor stated that the Dublin Corporation had decided to give the National University £3,000 for scholarships, and that they had earmarked 25 per cent. of this sum for technical-school scholars. This is some compensation for the abolition of the extern-student system, by which hitherto a considerable number of students of the Technical School have been able to obtain degrees (chiefly in mathematics and physics), without attendance on the day lectures of the University. The annual report, submitted at the meeting, showed the Dublin Technical Schools to be in an efficient state, the number of students during the past session being close on 1,900, a large number of whom obtained distinctions in the public examinations of the Board of Education, the Royal Society of Arts, the City and Guilds of London, &c.

Students of the Metropolitan School of Art in Dublin have also acquitted themselves well in the National Art Competition at South Kensington, having carried off two gold, three silver, and four bronze medals, besides prizes and certificates. The works sent in for the competition, as well as other specimens of the students' work, are on exhibition at the school during the last week of the year.

The Commissioners of National Education have appointed Mr. J. McNeill, B.A., Senior Inspector, to be Chief Inspector of National Schools, in place of Mr. A. Purser, who has resigned after a long and active term of service. "The Medical Inspection of Schools and School Children" formed the subject of a paper read by Dr. J. B. Story, F.R.C.S.I., at a meeting of the Statistical Society, held on December 9. As medical inspection does not obtain in Ireland, Dr. Story's arguments and facts were derived mainly from the results of inspection in England, but he made out a strong case for its introduction in this country. As for the necessary funds, they would have to be provided either by the Treasury or the rates. Dr. Story was inclined to recommend the latter course, as being the more hopeful, and tending also to encourage local interest in the matter. Dr. Story referred to the fact that three classes of the community who might be supposed to have some knowledge in the bringing up of children were not represented on the National Board, namely, the medical profession, mothers and women generally, and school teachers.

Now that the public interest has at least been roused to some extent on the important question of school hygiene, it is to be hoped that some practical steps towards reform will be made for instance, in the modification of the existing school hours, which might be done without any appeal to the Treasury. Unfortunately, in Ireland, a sudden ebullition of the public conscience is too often followed by a lapse into the previous condition of easygoing indifference.

A kindred question, the feeding of necessitous school children, was brought before the notice of the Corporation on December 4 by a deputation from the Ladies' School Dinner Committee. This Committee, relying solely on the voluntary services of its members and collections raised by them, is at present giving from three hundred to three hundred and fifty free dinners daily to children in the poorest schools of the city, as well as a hundred and fifty dinners at the charge of 1d. to children who can afford to pay so much. In England and Scotland free meals for poor school children are provided for by the rates, and the deputation asked for a grant from the Corporation to enable them to continue and extend their work. The matter has been referred to the Finance Committee of the Corporation.

The attendance of National school children was brought forward last year in a paper read by Mr. Frederick Ryan, at the Dublin University Gaelic Society. Mr. Ryan's facts and figures reveal an unsatisfactory state of things. Under the Compulsory Attendance Act, out of the school year of about 208 days, only 150 days' attendance is required. In Ireland, out of 670,000 children on the rolls, only 21 per cent. or 4 per cent. put in an attendance of over 200 days in the year, while about 200,000, a little over one third, put in only the requisite 150 attendances and no more. These latter can hardly be expected to profit by such desultory instruction as they receive. In forty towns in which there is a municipal government, and in about a hundred rural districts, there are no school attendance committees, nor is any attempt made to enforce the Act. One of the most painful features which daily life in Dublin presents to the observer, is the number of young children who are to be seen at all hours of the day, and late into the night, in the streets, all more or less ragged, often engaged in street trading, which in most cases is only a pretext for begging. Attempts have been made from time to time to awaken the public

conscience on this matter and to put down street trading among children; but the public conscience has so far never gone beyond admitting the grievance, while declining any responsibility for it.

The week before Christmas is in secondary education devoted to prize distributions and speech days; after which the schools close for the winter vacation of a fortnight. Alexandra College brought the term to an end on December 19, with that popular function known as "Students' Day," when a large number of students, past and present, and one or two old friends of the College, including the Countess Aberdeen, assembled in the evening to witness a capital performance of "Twelfth Night."

The Dublin Education Society held a meeting on December 13, in the Royal College of Science, when the Rev. T. Corcoran, B.A., Professor of Education in University College, delivered a lecture on "Education through History."

Our Oxford Correspondent's letter reached us too late for insertion.

SCHOOLS.

CHESTER, THE QUEEN'S SCHOOL.—The Prize Distribution took place in the Town Hall, on November 2, the prizes being distributed by Lady Mackinnon. The year's successes include the following:—Open Scholarships in Geology (Girton College), to Marjorie Smison; Hastings University Scholarship, to Kathleen Curlett; Tressie Brown Scholarship, to Marjorie Smison; Duke of Westminster's Gold Medal for Pianoforte Playing R.C.M. and R.A.M. Local Examinations, to May Swire; the Cambridge Higher Locals, Natural Sciences Division, Class I, Kathleen Curlett; Oxford and Cambridge Joint Board Higher Certificate, Margaret Dubben. On December 18 and 19 the school gave a theatrical entertainment in support of the School Charities. The children of the Lower School presented "The Dream Caliph," an Arabian Night's Extravaganza, those of the Upper School "Frithjof and Ingebjorg, a tale of the Northland." Both were new plays written for the occasion and were well received. Extensive additions are being made to the school. The new wing, in process of construction, will provide additional classrooms, laboratories, and a room for cookery.

HACKNEY, LADY HOLLES' SCHOOL.—On Wednesday, December 13, the prize distribution took place at this school, Dr. Inge, the Dean of St. Paul's, presiding. Amongst the successes mentioned by the Head Mistress, Miss A. B. Clarke, were the following:—Seven girls passed the Senior Certificate Examination London University: E. Glasstone in Class I, with distinction in French, Science, and Mathematics. M. Hintze has been awarded a scholarship of £40 a year for three years by the governors of the school, and is holding it at Bedford College. Thirteen girls passed Senior Oxford, H. Skipper with Second Class honours and distinction in English Language and Literature.

HARROW, THE COUNTY SCHOOL.—Lieutenant-General Sir Robert Baden Powell, K.C.B., visited the school at the end of November and addressed a meeting of parents and others upon "Scouting for Boys." The Head Master, Mr. Ernest Young, had conceived the idea of enrolling the whole school and of conducting the work in surveying, natural history, and other subjects, partly in the form of Scout work closely correlated with school work. Sir Robert delivered an eloquent and inspiring address on the general principles of his wonderful movement, the head master explained his proposed application of these principles to the County School, Harrow, and the parents asked questions and got sundry doubts settled. Within the next week 144 boys out of 183 enrolled themselves as Scouts. On November 4, Mr. W. E. Gaze, F.R.G.S., gave us a lecture, "An Evening in Egypt."

MARY DITCHFIELD SCHOOL AND TRAINING COLLEGE.—A Bazaar, held on November 24 and 25 for establishing a cot in King's College Hospital and maintaining others in All Saints' Convalescent Home for Children, Highgate, raised (after expenses were paid) the sum of £400.

MILL HILL SCHOOL.—The Old Millhills Club proposes to celebrate Dr. McClure's completion of twenty-one years' head mastership at Mill Hill next July by a building a music school, which shall bear his name, and by placing a portrait of him in the hall. In a statement just issued, Mr. Robert Temperley, of Newcastle, president of the club, says that the estimated cost of these projects is £3,000, towards which a considerable amount has already been promised. Dr. McClure's term of service, as Mr. Temperley says, has not been equalled in length by that of any of his predecessors, and, what is more, "at no period of its history has the school flourished as it flourishes to-day."

NORTH LONDON COLLEGIATE SCHOOL.—In the recently published degree lists of the University of London, the names of the following ex-pupils of the North London Collegiate School appear

Honours: First Class—G. M. Miall Smith (Zoology), E. E. Hewer (Physiology); Second Class—I. Davis (Classics), L. A. Jones (Classics), G. Misick (English), A. Moule (History), E. J. Scott (History), J. M. Bickley (Modern Languages), W. P. White (History). Third Class—N. J. Winterbottom (Botany); Pass First Division—A. L. Byatt (Arts), E. L. Marler (Arts), S. Dywien (Arts), N. Milnes (Science); Pass Second Division—D. G. Hewer (Science), E. H. Pannett (Science), E. Jacob (Science), D. M. E. Clark (Arts). Final Degree Examination, 1911: Gladys Miall Smith, Class I in Zoology; Evelyn Hewer, Class I in Physiology; Irene Davis and Lilian A. Jones, Class II in Classics; Gladys Misick, Class II in English; Annie Moule and Eleanor Scott, Class II in History.

OXFORD, MILHAM FORD SCHOOL.—The annual prize-giving was held on November 30, in the new Lecture Room of Cherwell Hall College, the chair being taken by the Rev. D. S. Margoliouth, the Laudian Professor of Arabic. The report, which was read by the Head Mistress, Miss C. I. Dodd, M.A., showed that one pupil had won a scholarship tenable at the University of Oxford, while four girls have had school scholarships renewed. In the Oxford Senior Local Examination, for which last July 9,575 candidates entered, pupils of Milham Ford School won the first place in English, the second place (equal) in History, and the third place (equal) in Botany.

ROMFORD COUNTY HIGH SCHOOL FOR GIRLS.—On Speech Day, December 14, the Earl of Meath unveiled a tablet, the work of Mr. R. Garbe, given by the pupils, their parents, the Head Mistress and staff in commemoration of the transference of the school to its new premises. A flag, the gift of one of the governors, was also presented to the school. The Head Mistress, Miss F. B. Bardsley, B.A., reported that during the year 1910-1911 ten girls had passed the Senior Cambridge Local Examination. The Earl of Meath gave an address on "The Relation of Women to the Empire, their Call to it, and their Place in it."

SHERBORNE SCHOOL FOR GIRLS.—The new buildings erected to take the place of those destroyed by fire during the Christmas holidays (1910) were opened on October 26 by Princess Victoria of Schleswig-Holstein. Archdeacon Westcott, Chairman of the Governors, presided. An organ, to be placed above the concert hall platform, has been presented by Mrs. Kenelm Digby in memory of her late husband.

STRAND SCHOOL, KING'S COLLEGE.—Speeches and distribution of prizes took place on December 7 in the large hall, Church House, Westminster. The Head Master, Mr. R. B. Henderson, in submitting the report, stated that during the past year four pupils had passed the London Intermediate, fifty the London University School Examination, and thirty-six had passed open competition appointments in the Civil Service, including first and second places in the Customs and Excise Examinations. He referred to the advantage of having a representative of the assistant masters on the governing body. The Rev. A. A. David, who distributed the prizes, expressed his satisfaction at the wonderful success of the school in supplying good recruits for the Civil Service. That was a career which offered exceptional opportunities to character and capacity. The qualities that were needed were honesty—i.e. the resolve to put in honest work—courage to tell a Cabinet Minister, if necessary, that he is doing wrong, and loyalty. The speeches included a scene from Shakespeare's "Henry IV," from Goethe's "Faust," and Racine's "Les Plaideurs."

WORCESTER HIGH SCHOOL.—The principal prizes and distinctions gained in the school during the past year are the following:—Oxford and Cambridge Joint Board: six higher certificates and four letters with seven distinctions, twelve lower certificates and one letter with twenty-five first classes. Société Nationale des Professeurs de Français: thirteen prizes (three in the Concours de Lauréats), seven certificates, and thirteen Mentions. Associated Board R.A.M. and R.C.M.: Centre Examination—three intermediate grade (in piano, violin, and singing respectively); Schools Examination—fourteen, with two distinctions in the higher division. Royal Drawing Society: forty-one honour and thirty-six pass certificates. Association of Plain Needlework: seven first, seven second, and two third prizes, and fifty-three first class certificates. Training Department: one Cambridge Teachers' Diploma (first class). National Froebel Union: one higher certificate with distinction in History of Education, one elementary certificate. D. Chappel gained the first scholarship at St. Hugh's College, Oxford, in history. J. Tree won a Gilchrist Scholarship at Somerville College, Oxford, in history. Old Girls: D. M. V. Hodge has been appointed head mistress of the Lichfield High School, and E. Young head mistress of the new Woodard School, to be opened at Harrogate this year. M. March has received the degree of M.Sc. Manchester; and the Mark Stirrup Scholarship for the second year. Speech day was December 4. Mrs. Temple distributed the prizes and certificates, and then addressed the visitors and children. After

alluding to the work done by the pioneers of higher education for women, she said that there still remained the duty of maintaining this education at the level it had reached. In so doing, schools independent of the State had a great advantage, for they could avail themselves of the helpful suggestions of H.M. Inspectors without the necessity of adhering to the regulations of the Board of Education. In returning thanks to Mrs. Temple, the Chairman, Lord Cobham, announced that the house in Britannia Square, which has long been used as a boarding house, had just been purchased, and was now permanently attached to the school.

COLONIAL AND FOREIGN NOTES.

FRANCE.

The topic of the hour in political circles is the strengthening of the *entente cordiale*. At the risk of being told that the concords in our province are the grammatical, let us offer a word to the discussion of means. Very urgently do we repeat our plea for the establishment of an Institut français in London. Perhaps the reader has forgotten what an Institut français is. It is an offshoot of a French University, planted in a foreign country. Under this form of University Extension culture is at once imbibed and communicated, France giving of her own and receiving that of the land in which she sets her foot. It is a new movement, rich in promise. In 1908 an Institut français was established at Florence by the Universities of Grenoble and Lyon. Afterwards similar institutions were founded at Madrid and St. Petersburg; a fourth is to be opened at New York.

Let us explain how the Institut français at Florence, the most fully developed of these academies, works. Administratively it is an annex of the Faculty of Letters of Grenoble, which appoints the director and fixes the expenditure. Two courses of lectures to the public are given every week, one on the history of French art, the other on the history of French music. For regular students the instruction is divided into four sections, the most important being the section of Italian literature for French students, and that of French literature for Italian students who seek to become teachers of French. Apart from lecturing, the Institut has already issued numerous publications and, in particular, a series of French classics for Italian schools.

There is similar activity at St. Petersburg. Founded last March, the Institut français in the Russian capital was formally opened on October 31. It is under the patronage of the Universities of Paris, Nancy, Lille and Dijon, of the Collège de France, of the Ecole des Hautes Études, and of the École des Langues orientales. Its objects will be, on the one hand, to foster the study of the Russian language, literature, history and arts in France, and to gather in one sheltering home the French who wish to devote themselves to Slavonic studies; on the other, to diffuse in Russia a knowledge of the French language and literature. The program of courses and lectures runs thus: (i) History of French Art (French painting in the Nineteenth Century); (ii) History of French Literature (romantic literature in France); (iii) History of France (French civilization in the Eighteenth Century); and (iv) Byzantine history (Constantinople in the Middle Ages). Moreover, a teacher from a girls' lycée in France will tell the Russians all about the progress of education among French women at home.

Now would it not be delightful if we could get a colony of witty Frenchmen, professors and students from, let us say, the University of Paris, housed at Kensington, and tell them all about Mr. Runciman, Mr. Pease, and the Board of Education? "Mais, Messieurs, c'est pour ça que nous l'avons fait Ministre de l'Instruction publique—qu'il fait la chasse au renard!" A little merry laughter is, after all, the best cement of friendship. But our aim is higher than at any fireside amenities; we seek a new quickening of our own civilization through the absorption of French culture, with all its graces. In this spirit we would welcome a German Institut no less warmly than a French, and would extend the relation of *entente cordiale* to all the *Kulturvölker* of the earth. The world is still in its babbling infancy. Just as the individual develops himself best, not in isolation, but amid the give and take of social life, so the hope of mankind for the future lies in the alchemy of exchange, in the dissolving of prejudices, in an

increased receptivity for those alien influences which enrich a people without denationalizing it.

A prejudice about the Frenchman that it were well to overcome is that he is one for whom *misconduct* is two-thirds of life. It is derived, in great measure, from the stage: you choose for adaptation

An Educative Theatre.

"risky" French plays, then shudder at the improprieties of the French nation. Yet France is doing more than England to get schooling from the theatre. The new Théâtre Français Coppée, in the Rue de Prague at Paris, shows, by the name of the poet to whom it is dedicated, its aim and tendencies. It expresses a reaction—a protest against insipidity and licentiousness on the stage. On Tuesdays and Fridays will be offered in the evening to men and women of the world plays recommended by their inspiration and their literary merit; and on Saturdays and Sundays, also in the evening, there will be performances suitable for families. But mark this. On Sundays and Thursdays *matinées* are to be given, at which will be produced wholesome classical and modern plays for young students, *for boys and girls*. We are crying out in England for a "National Theatre"; there is need also of an "Educative Theatre," with eager youth as the audience. We have been forgetting the value of the drama as an instrument of education. In the contemned Middle Ages educators knew the power of the play to discipline the mind, to form manners, and to kindle moral enthusiasm.

A few months ago the constitution and the powers of the Conseil supérieur de l'instruction publique were set forth in this column. In France you may reform anything; in England we are at a deadlock. The Areopagus itself was not immune from change, and, for all the sacredness of the Conseil supérieur, M. Steeg is minded to lay an improving hand upon it. At present Secondary Education for Girls is not represented. The omission, intelligible in 1880, when the Conseil was remodelled, is now to be made good; moreover, a representative on it will be given to the *répétiteurs*. These members will not alter its essential character. But the French Minister intends, as it appears, to make a new departure, and to add representatives of Commerce and Labour. That part of the reform is significant, and perhaps to be viewed with a little anxiety.

Reform of the Conseil supérieur.

GERMANY.

Religious instruction is a subject that we approach with self-diffidence, for we are not theologians and we have a quite old-fashioned notion that all problems are best discussed by those who have studied their conditions. But certain phenomena, plain to every man, invite attention. On the one hand, we are offering to boys and girls as infallible truths statements which they presently find to be regarded in books and journals as extremely fallible. On the other, the Christian sects are quarrelling about Christian doctrine when, at least so far as schools are concerned, there may be a form of Christian instruction which all would approve. Perhaps we can get some hints from Germany that may be useful in considering these phenomena.

Pädagogisches Archiv, LIII, Heft 11, under the heading "Das neueste Stadium der Reformbestrebungen auf dem Gebiete des Religionsunterrichts," prints an article by Prof. Dr. Arno Neumann in which

New League.

is related the recent birth at Jena of a new "Bund für Reform des Religionsunterrichts" (League for the Reform of Religious Instruction). The society aims at something whole and real, not at halfness, not at a thinning and dilution of religious truth; it seeks the golden mean between religious Nihilism and Catholic or Protestant clericalism. The school must be freed from all ecclesiastical influence, and religious instruction must be, as it were, secularized whilst remaining Christian. From the principles laid down by Prof. Rein, who is the President of the acting committee of the League, a fairly clear idea may be got of its scope:—(i) The teacher must be under no dogmatic constraint; (ii) catechism must be banished from the school; (iii) religious instruction is to be of a historical character; (iv) it must be in near touch with art; and (v) it must follow closely the natural development of a child's mind. With regard to this development, three stages are indicated: the age of stories (*Märchen*) and saga, the age of memory, and (with the coming of puberty) the age of reflection.

Now if we might assume that the school, leaving dogmatic teaching to the churches, could concern itself, not with right believing, but simply with right doing, would not Prof. Rein's principles help

Feeling for Help.

wish to call attention to their list for the CAMBRIDGE LOCAL EXAMINATIONS

KING HENRY V.

Edited with Questions, Notes, and Appendixes, by the Rev. C. R. GILBERT, M.A. Illustrated. Crown 8vo, 1s. Plain text, 6d. net. This Edition is based on the recommendations contained in Circular 753 of the Board of Education on the Teaching of English Literature. It also has very clearly in view the requirements of the Oxford and Cambridge Local Examinations.

A FIRST SCHOOL CHEMISTRY.

By F. M. OLDHAM, B.A., Senior Science Master at Dulwich College. With 71 Illustrations. Second Edition. Crown 8vo, 2s. 6d.

PRÉCIS OF COMPARATIVE FRENCH GRAMMAR.

By A. BARRÈRE, Professor of French at the R.M.A., Woolwich. 3s. 6d.

A rapid survey of the most important rules of grammar.

SHORT PASSAGES FOR FRENCH COMPOSITION.

An Intermediate Graduated Course for the Translation of English into French. By ALBERT BARRÈRE and LEON SORNET, French Master at King Edward's High School, Birmingham. 2s. 6d.

BOSSUT'S FRENCH PHRASE BOOK.

New Edition. Containing over 750 useful phrases and idioms. 6d. net.

Williamson's First Latin Unseens.

Second Edition. 6d. net.

Williamson's Second Latin Unseens. 1s. net.

Shrive's First French Unseens.

Second Edition. 6d. net.

Shrive's Second French Unseens. 1s. net.

The First books are for the Lower Forms and the Preliminary Local Examinations. The Second books for Middle Forms and the Junior Local Examinations. More than 100 schools use them.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. Applications should state the number of copies that will be required if the book asked for is introduced. Their new Educational Catalogue is now ready.

MILLS & BOON, LTD., 49 RUPERT STREET, LONDON, W.

PREPARATORY ARITHMETIC.

By F. C. BOON, B.A., Principal Mathematical Master at Dulwich College. 1s. Answers and Hints on the Solutions of the Problems, 6d. net.

The body of the book contains 4,300 questions, of which 2,600 are oral or mental, covering ground as far as Square Root, and Cube Root by factors, easy rectangular Areas and Volumes, Compound Proportion and Inverse Simple Interest; Practice Methods receive a large share of attention.

ARITHMETIC FOR SCHOOLS AND COLLEGES.

By F. C. BOON, B.A. Without Answers, 3s. 6d.; with Answers, 4s.; Answers, 6d. net.

The subject matter covers all the arithmetic used in Schools, including work for Civil Service and London University Examinations. It has chapters on Variation, Graphs, Graphic Arithmetic, Theory of Numbers, Theory of Decimal Fractions, Continued Fractions, Error in Approximate Calculation, and a much more adequate treatment of Mensuration than is usual in School Arithmetics.

A special booklet giving full particulars of Mr. Boon's Arithmetics, with specimen pages, is now ready and will be sent post free.

HOUSEHOLD ACCOUNTS.

By RUPERT DEAKIN and P. J. HUMPHREYS. Crown 8vo, 6d. net. An Arithmetic for the upper forms of girls' schools.

A NEW SCHOOL GEOMETRY.

By RUPERT DEAKIN, M.A. Part I: Lines, Angles, Triangles, Rectilinear Figures, and the simpler Solid Bodies. With 200 Diagrams. 1s. Part II. In preparation.

This book contains both Practical and Theoretical work and all that is prescribed for Geometry in the Preliminary Local Examinations. There are more than 1,000 Exercises and Riders which have been carefully arranged so as to be presented with gradually increasing difficulty, and also to lead up to the discovery of new propositions and new ideas.

GEORGE ALLEN & CO., LTD.

THE PARALLEL GRAMMAR SERIES

Now includes **Grammars of English, French, German, Welsh, Dano-Norwegian, Spanish, Dutch, Latin, and Greek**, each consisting of Two Parts—I. ACCIDENCE, II. SYNTAX—varying in price from **1s. to 2s. 6d.** each Part.

The Series also includes **Readers and Writers for French, German, Latin, Welsh, Dutch, and Greek**, together with **Exercises in English**, at from **1s. to 2s. 6d.** each.

Single Copies of any Volume will be sent free to any Teacher on receipt of half its published price. Keys to the Latin and German Readers and Writers may be had by Teachers direct from the Publishers.

PLANT LIFE: A TEXT-BOOK OF BOTANY FOR SCHOOLS AND COLLEGES.

By EUG. WARMING (Prof. of Botany at the University of Copenhagen). Translated from the 4th edition by METTA M. KERLING and ELIZ. M. THOMAS, B.Sc.
Crown 8vo, cloth, with 250 Illustrations, **4s. 6d.** net.

A HISTORY OF ENGLISH VERSIFICATION.

By DR. MAX KALUZA (Prof. of English at Königsberg University). Translated by A. C. DUNSTAN.
Crown 8vo, cloth, **5s.** net.

DUBLIN UNIVERSITY FRENCH TEXTS.

Edited by Prof. MAURICE A. GEROTHWOHL, Litt.D.
Crown 8vo, cloth, **2s. 6d.** net.

Saint Simon: Selections.

By NEVILLE PERKINS, Manchester University.

Beaumarchais: Mariage de Figaro.

By E. RENAULT, Liverpool University.

La Satire Ménippée.

By P. DUMEY, Birmingham University.

AN ELEMENTARY TEXT-BOOK OF BOTANY.

By DR. SIDNEY H. VINES, M.A., D.Sc., F.R.S., Sherardian Professor of Botany in the University of Oxford.
483 Illustrations. Demy 8vo, **9s.**

A NEW ENLARGED EDITION OF ELEMENTARY TEXT-BOOK OF PRACTICAL BOTANY.

By Prof. E. STRASBURGER. Edited by Prof. HILLHOUSE.
Demy 8vo, **10s. 6d.**

THE STUDENT'S BOTANY.

By SIDNEY VINES, M.A., D.Sc. *Third Edition.*
483 Illustrations. Demy 8vo, **15s.**

INTRODUCTION TO THE STUDY OF ORGANIC CHEMISTRY.

A Theoretical and Practical Text-book for Students in the Universities and Technical Schools. By JOHN WADE, D.Sc. (London), Lecturer on Chemistry at Guy's Hospital, University of London. Crown 8vo, **8s. 6d.** net.
Also issued in Two Parts, each furnished with its own Index and complete in itself. Part I, **5s.** net. Part II, **4s. 6d.** net.

HOW TO TEACH A FOREIGN LANGUAGE.

By OTTO JESPERSEN, Professor of English in the University of Copenhagen. Translated from the Danish Original by SOPHIA GILLENOLSON BERTELSEN, M.A. Crown 8vo, **3s. 6d.**

GERMAN FOR THE ENGLISH.

By A. SONNENSCHLIN. *Fifth Edition.*
Crown 8vo, cloth, **2s. 6d.** net.

GERMAN THROUGH ENGLISH.

(Grammatical Readings.) By A. SONNENSCHLIN.
Crown 8vo, cloth, **2s. 6d.** net.

GREEK GRAMMAR.

By G. SIMONSON, M.A., M.D. In Two Parts. **Accidence** and **Syntax.** Medium 8vo, cloth, **6s. 6d.** each.

NEW AND CHEAPER EDITIONS OF

HISTORIC LINKS.

By D. L. MAGUIRE, LL.A. With a preface by HUBERT HALL. Crown 8vo, cloth, illustrated, **2s. 6d.** net.

A MANUAL OF OBJECT LESSONS.

By H. W. ROOPER. Crown 8vo, cloth, with 20 Illustrations, **1s. 6d.**

AN ENGLISH COURSE FOR EVENING STUDENTS.

By FRANK J. ADKINS, M.A. Crown 8vo, cloth, **3s. 6d.**

PRACTICAL HANDBOOK OF ELOCUTION.

New and Enlarged Edition. By ROSE PATRY.
Crown 8vo, cloth, **3s.** net.

THE ADOLESCENT.

By J. W. SLAUGHTER. With an Introduction by J. J. FINDLAY. *Second Edition.* Crown 8vo, cloth, **2s. 6d.**

THE VOICE AND ITS NATURAL DEVELOPMENT.

By HERBERT JENNINGS.
Crown 8vo, cloth, illustrated, **3s. 6d.** net.

MONOLOGUES FOR RECITATION.

By ELSIE FOGERTY, Editor of "Standard Plays for Amateur Performance in Girls' Schools," &c., and AMY NANKIVELL.
Crown 8vo, paper, **6d.** net.

PRACTICAL ESSAY WRITING.

By A. W. HOLMES FORBES. *Fourth Edition.*
Crown 8vo, **1s. 6d.**

STUDENT'S EDITION OF THE ODES OF HORACE.

Books I to III. By E. R. GARNSEY, Author of "The Odes of Horace," "Epilegomena of Horace," &c.
Demy 8vo, cloth, **6s.** net; paper, **5s.** net.

ALLEN'S TECHNICAL AND ART MANUALS.

Demy 8vo, cloth, gilt top. Each with about 24 full-page Plates and Text Illustrations. **4s. 6d.** net each.

Form an entirely new departure in works of this class. They treat of either entirely new technical processes, or developments of old processes, and in no other technical handbooks have such excellent illustrations appeared.

By G. A. AUDSLEY, LL.D., and BERTHOLD AUDSLEY.

Artistic Stencilling.

Amateur Joinery.

us to a sufficient method of religious instruction? "Subjective religion," said a speaker at Jena, "or, as Schleiermacher put it, piety (*Frömmigkeit*) is not teachable." We must away with mechanical processes, with sermonizing, with insistence on formal confessions of faith; what is needed is a simple presentation of the main outlines of religious history, and a limning of the great and adorable persons of whom such history treats. To the youngest children might be offered the beautiful stories related in the Scriptures—stories which keep their charm always—and that without any discussion of their character. In the next stage—that of memory—texts and passages containing immortal and universally accepted truths would, when comprehended, be learned by rote, and the history of religion studied. Lastly, in the years of adolescence, boys and girls would be called on to reflect upon the matters presented to them, to deduce inferences, to compare inwardly their own deeds with those set before them as examples. In all the stages the spoken word *would be reinforced by truly artistic pictures*, so that the impressions produced might be at once vivid and beautiful. You could sum up the method thus: *it proposes not to inculcate, but to infuse holiness.*

We hear the question coming from many lips—And what part does the Founder of Christianity play in all this? **An Objection.** We are contemplating (what, as we think, the Germans are not) a supplementing of school instruction by the several Churches. In the school He would move beside St. Paul, having just his historical value; the Church would assign to Him his proper place. But we leave such matters to divines; we are writing in a humble spirit and for suggestiveness—insisting, however, quite firmly on this: *that it were better to teach Jesus in this new German fashion than merely to quarrel about Him.*

The moment is coming when these themes will be in all mouths. We write as augur to augurs. Did we in childhood get more by reading "The Pilgrim's Progress," well illustrated, in a quiet nook, or by cribbing the Collect from another boy's back whilst the teacher was half asleep? Perhaps Prof. Rein is not wrong in maintaining that the former, or presentative, method is better than any formally didactic or catechetical process. And in these discussions we meet continually with an assertion of the *right* of a man to teach

religion. *Right!* He does it at his own risk. The poor scribbler of these lines was once a master in the strictest Church school in England. If he, a layman, had claimed a *right* to instruct his pupils in the principles of religion he would certainly have been dismissed, and would properly have been shot. We leave it to our readers to reflect whether Churchmen are or are not fighting for a form of religious instruction which is void of power; and whether they do not sometimes offer to others arguments that they could themselves ill digest.

Closely connected with the settlement of the "religious difficulty"—it would seem as if the clergy knew nothing of the connexion—is the development of Continuation. If Mr. Runciman's draft Bill be technically dead, it is still illuminative. Clause 3 states that the earlier provisions of the Bill are not applicable in the case of any child "where there is no public elementary school open which he can attend within three miles." To be brief, an efficient scheme of Continuation can be realized only if the great majority of the primary schools are brought under public control.

We must call attention once more to what is going on in Germany. First we report increased care for the *physical well-being* of the young on their leaving school. In the October and November numbers of the *Deutsche Rundschau* Generalfeldmarschall Freiherr v. d. Goltz published an article headed "Jung-Deutschland" (Young Germany), so convincing that it led forthwith to the establishment of a Jung-Deutschland League (*Bund*). The aim of this League is by suitable corporal exercises to promote the physical and moral strengthening of the young when released from school. It will seek and keep touch with the various local gymnastic societies in the several States. Working men, craftsmen, students—all classes fall within its scope: "Das ganze Jung-Deutschland soll es sein, das sich der Erstarkung der künftigen Volkskraft widmet!" The formation of the League is deemed in Germany to be an important event. With regard to Continuation we are constantly receiving such news as this: "By April 1, 1912, Mecklenburg will have established commercial continuation schools (*kaufmännische Fortbildungsschulen*) in the following places [a list of twenty-five (!) small towns is then given]. For the training of the

TRANSFER AND PARTNERSHIP DEPARTMENT.

MESSRS. GABBITAS, THRING, & CO., having upon their books at all times a large number of thoroughly *bona fide* Boys' and Girls' Schools for Transfer and Partnerships in such Schools to negotiate, as well as the names of a very large number of Purchasers, both ladies and gentlemen, are able, with their thirty years' experience, to negotiate the Transfer of Schools of all types confidentially and efficiently.

The Transfer Department is in the hands of one of the Principals, who personally attends to all instructions.

Valuations are carefully made.

No list of any kind is issued—all instructions being strictly confidential—but each Client receives individual attention on receipt of detailed particulars.

No commission is charged to purchasers.

STANFORD'S NEW OROGRAPHICAL MAPS

Compiled under the direction of

H. J. MACKINDER, M.A., M.P.,
Reader in Geography in the University of London.

"This excellent series."—*Geographical Journal*.

These Maps are primarily intended to depict the physical features of the Continents, but by the employment of the device of grey, almost transparent lettering, many names have been inserted without spoiling the graphic effect of the colouring. The contour lines have been drawn at the same intervals above and below the sea-level, with the result of rendering visible the true contrast between land elevations and ocean depths. The frontiers of countries have been marked by distinct, though subordinate, broken lines, and every town of a given minimum population has been indicated by a symbol.

teachers to be employed courses were held at Rostock from September 25 to October 5."

Can we allow ourselves to sit idle still, feeding on sympathy and breaking our hearts with unfulfilled hope? The new President of the Board of Education is not disqualified for his Office by the fact that he excelled in manly sports; but to begin with a resolve to bring in no Bill for twelve months would be like going into battle sworn not to fire in the first hour. Yet even without a Bill much could be done: extra-parliamentary discussions and negotiations might clear the way for a revival of Clause 6 of the old Bill, and an Instruction upon the theory of Continuation would yield help for the Local Authorities in making continuation classes attractive. We plead for *action*, for some proof of earnestness; in the name of the children we ask that the Government shall set Country above Party, and do right for righteousness' sake.

UNITED STATES.

Vocational instruction is one thing, vocational guidance is another. We owe to the courtesy of the Librarian of the Grand Rapids (Mich.) Public Library an interesting account of what is done for vocational guidance in the Central High School of that city. Such guidance aims to direct the pupil *throughout the school course* in preparing himself for his work in life. He is taught to ask himself what the elements of character that give success are, to compare his own abilities and opportunities with those of successful men and women in the past, to choose a vocation and so to give direction and purpose to his efforts. The outline of his study (reinforced with books kept in the public library) is carefully drawn; we give the scheme for the fourth year, when the student regards himself and his vocation in relation to Society. "A. First half-year—Social Ethics: The Individual and Society—from the point of view of my vocation. (1) Why should I be interested in (a) public schools? (b) the slums? (c) social settlements? (d) public charities? (e) the Church? (f) social service? (2) The Social Relation of the Business Man. B. Second half-year—Social Ethics continued; (1) The Rights of the Individual, (2) Protection to the Individual from the State, (3) The Obligations

of Citizenship, (4) The Rights of Property, (5) The Responsibility of Power."

NOVA SCOTIA.

We have received the Calendar of the Provincial Normal College, which seems to be a well organized institution. The College offered for the first time in 1909-10 a training course for kindergarten teachers, and six students completed it with success. It should always be remembered that the kindergarten is the best bottom rung yet devised for the educational ladder. The Calendar and the official *Journal of Education*, which accompanies it, have a feature of peculiar interest: they are printed in accordance with the recommendations of the "Simplified Spelling Board" and the "Simplified Spelling Society" of Great Britain, Nova Scotia becoming thus the first State of the Empire to adopt the new forms. The (United States) *Educational Review* uses "thru" and a few other timid innovations; here we have "zealous," "geografy," "fysics," and so forth. We need not repeat what we have already said upon the subject of spelling reform. In England it is raising its battered head again, and gratifies a somewhat primitive sense of humour. Curious, by the way, to see so many journals urge *other* journals to embrace it, the current belief being that it would ruin the *Times* in a month.

Children are taught in many places to observe the phenomena of Nature. In Nova Scotia this method of instruction is developed with great completeness. A sheet is issued which has to be handed promptly by the Secretary of every School Board to each teacher employed within its district. It contains forms in which are to be recorded the dates of the first leafing, flowering, and fruiting of plants and trees, the first appearance of birds migrating North in spring, or South in autumn, and meteorological phenomena, such as the last fall of snow and the opening of an ice-bound river. Children are encouraged to watch all these things, especially on the way to and from school, so that much "Nature study" is done without any encroachment upon school hours. The records thus obtained are sent to the Inspector along with the school returns in July and February, and make a sort of Natural History of Nova Scotia, written by its own children.

(Continued on page 60.)

GIRLS' SCHOOL TRANSFERS.

MESSRS. GABBITAS, THRING & CO.,
36 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

TRANSFERS OF AND PARTNERSHIPS IN GIRLS' SCHOOLS.

Messrs. GABBITAS, THRING & Co. have a large number of Girls' Schools on the books of their Transfer Department, but issue no list of such Schools. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her.

The following are a few of the Schools now on their books:—

No. 4,925. **TRANSFER** of flourishing Preparatory School for Girls and Boys, with Kindergarten, in a good residential suburb, containing about 30 Pupils, all at present under 13 years of age, at fees of 6 to 9 guineas per annum. Gross receipts just over £300.

No. 4,923. **TRANSFER** of Nucleus of Home School, chiefly for foreign girls of good position, in picturesque well-appointed house in one of the Home Counties. Receipts between £800 and £900. 99 years' lease. To be sold for £1,200, £600 remaining on mortgage.

No. 4,918. **OPENING** for joining a lady of excellent experience and proved success as a Schoolmistress, in starting a high-class Girls' School in a very desirable position in a beautiful district not far from London. Some capital and good educational qualifications, but not any special connexion, required.

GIRLS' SCHOOL TRANSFERS.

No. 4,912. **TRANSFER** or **PARTNERSHIP** to **succession**, in School at bracing Inland Health Resort, containing about 15 Boarders and 15 Day Pupils. Prospectus fees £60 and £15. 15s. respectively. Gross receipts of last year and average of last three years, £1,000. Profit for the same periods, £150. Price for the whole, including Furniture, £1,000.

No. 4,890. **TRANSFER** of old-established, flourishing School at a South Coast Health Resort, containing about 50 Boarders, at prospectus fees of 60 to 75 guineas, and most of them paying quite full fees. Gross receipts for last year about £3,000, being an increase on the average of last three years. Fees for current year indicate further increase. Goodwill £2,500.

No. 4,887. **TRANSFER** of old-established Preparatory School for Boys, under a lady, situated at South Coast Health Resort. Principal wishes to retire on account of advancing age. Wide and long-established English and Anglo-Indian connexion.

No. 4,880. **PARTNERSHIP**, with a view to **succession**, in flourishing Boarding School at a favourite South Coast Resort, full with over 30 Boarders. Day Pupils not received. Prospectus fees of 90 guineas. Gross receipts about £4,600 last year. Average annual receipts of last three years about £3,800. Net profits about £860 and £700 respectively. Goodwill of half share £1,000.

No. 4,877. **TRANSFER** or **PARTNERSHIP** to **succession**, in excellent Boarding and Day School for gentlemen's daughters, at a residential locality close to a Scottish City. About 25 Boarders; prospectus fees 84 to 96 guineas; 10 Day Pupils and Day Boarders at prospectus fees of 6 to 33 guineas. Gross receipts over £2,000, and net profits £700 or more. Terms dependent largely on suitability of proposed partner or purchaser.

No. 4,874. **PARTNERSHIP** in successful and increasing Boarding and Day School in the Midlands, with Preparatory Class for young Boys. 7 Boarders and 26 Day Pupils and Day Boarders. Gross receipts of last 12 months £1,150; average annual receipts last three years £1,000. Premises well situated. £350 for a half-share of Goodwill. Furniture and equipment estimated to be worth about £1,000.

GIRLS' SCHOOL TRANSFERS.

No. 4,863. **TRANSFER** or **PARTNERSHIP**, with a view to **succession**, of first-rate School in a healthy residential locality near London, containing from 30 to 40 Boarders. Prospectus fees 90 to 120 guineas. Some Day Pupils. Gross receipts averaging about £6,300 per annum.

No. 4,838. **TRANSFER** or **PARTNERSHIP** to **succession**. Flourishing Day Connexion in good residential locality near London. Nearly 40 Day Pupils and Day Boarders, the former at prospectus fees of 15 to 24 guineas. Owner removing with Boarders. School has grown rapidly, and is still increasing.

No. 4,837. **PARTNERSHIP**, with a view to **Succession**, in successful Finishing School of the highest class on the Continent. Prospectus fees 120 guineas. Gross receipts about £5,000, and net profits about £1,000. Part of purchase money to be paid down, remainder by instalments.

No. 4,818. **TRANSFER** of very successful Boarding School for the Daughters of Gentlemen, at a healthy Educational Centre on the Continent. School flourishing, practically full with about 30 Boarders, at fees of 90 to 180 guineas according to requirements and whether entire charge is taken. Gross receipts for last year about £3,000, an increase on the average of the previous years. Expenses calculated at £2,120. Goodwill two years' purchase.

No. 4,814. **TRANSFER** of old-established Day School, in a Suburb of a Northern Manufacturing Town. Over 40 Day Pupils at fees of £6 to £15 per annum. Gross receipts over £600, and profit over £300. Goodwill and School Furniture, £250.

No. 4,671. **TRANSFER** of flourishing Day School for Girls, with Preparatory Department for Boys and Kindergarten, in a high-lying Suburb of London, containing over 160 Day Pupils. Prospectus fees from 48 guineas in the Kindergarten to 12 guineas per annum. Gross receipts over £1,100, and net profits over £300. Receipts and profits increasing. Goodwill, £750, or two-thirds capitalisation fees.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require full particulars before arranging introductions to their clients. No charge is made to Purchasers.

STARS AND STRIPES

A (copyrighted) System of Reward and Punishment

for
BOYS' OR GIRLS' SCHOOLS,
large or small.

Tested and developed by the Authors during 20 years and
now used in over 100 Preparatory and other Schools.

It furnishes Head Masters or Head Mistresses with
a permanent, detailed and indisputable record of
each pupil's doings.

It obviates all need for ordinary punishments, and
gives an equal chance to all of winning prizes.

It discounts fitful brilliance and encourages keen,
conscientious, all-round effort.

"Star and Stripe" Books, each containing 50 Forms and
Counterfoils, 6d. net each (postage 1d.).

dices:*—Recollections of Mark Pattison—Mr. Romanes's
Catechism—Neochristianity and Neocatholicism: a Sequel.
Index to the Classical and other Quotations, with English
renderings.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

SECOND EDITION. Crown 8vo, cloth. Price One Shilling.

FRENCH WORDS AND PHRASES.

By J. G. ANDERSON and F. STORR.

"The words and phrases in this book are well chosen, and such as
ought to be got by heart and kept in the memory of French pupils. They
are classified under distinct heads and are mainly in common cases, and
may be learnt in sections as required. The fashion is old, but Mr. Storr
shows the value of a good working vocabulary, and gives good reasons for
the adoption of its form, as well as excellent advice as to its use."—*The
Educational News*.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

HARRAP'S LATEST PUBLICATIONS

volumes: Prospectuses of them, and also their new Illustrated
List of Supplementary Readers.

London: GEORGE C. HARRAP & CO., 9 Portsmouth St., Kingsway, W.C.

PRIZE COMPETITIONS.

The winner of the Translation Prize for November is Miss Mabel M. Spear, Springfields, Entry Hill, Bath.

The Translation Prize for December is awarded to "Emil." *Proxime accessit* "Amadan."

Parmi tous ces motifs de refus, il y en avait encore un autre, et le principal, que le malin ne mettait pas en ligne de compte, mais que le démon lui soufflait tout bas : c'est qu'il allait saisir la Renommée par un autre bout de l'aile. Les passions royalistes de 1816 avaient opéré en lui en sens inverse : tant de violences mêlées à tant de ridicules avaient suscité sa gaité vengeresse. Il était à l'affût : le royalisme de la *Chambre introuvable* fit lever le gibier devant lui ; il n'avait plus qu'à tirer sans se mettre en quête d'autre chose. Quand je dis que ce motif, essentiel pour lui, de refuser le feuilleton, ne se trouve pas dans sa réponse à M. Etienne, je me trompe ; car la lettre finit par ce post-scriptum qui n'a l'air de rien et qui est tout : "Voici le *Marquis de Carabas*. Faire des chansons, voilà mon métier . . ." Et quelque temps après, quand ces folies et ces fureurs amènent la répression, mais aux dépens des journaux qu'on censure, il y voit un nouvel à-propos, une occasion qui lui est offerte de plus belle : "La presse est esclave, il nous faut des chansons."—C'en est donc fait, arrière les longs poèmes ! il les jette au feu ou les met au fond du tiroir. Désormais il ne se dédoublera plus, et il est tout entier, tout cœur, toute âme et tout art,—tout calcul même si l'on veut,—dans le petit genre dont il fit ce qu'on a vu.

By "EMIL."

With all these reasons for refusing there was one other, and that the chief, which the wily fellow did not bring forward, but which his familiar spirit whispered low in his ear—he was going to capture Fame by the other wing. The royalist passions of 1816 had produced upon him an effect contrary to that intended. Proceedings so violent as well as so ridiculous aroused in him a mocking spirit of retaliation. He had been lying in wait ; it was the royalism of the *Chambre Introuvable* that beat the woods for him and raised the quarry. All that he had to do now was to fire.

When I say that this reason, the real one, for refusing to write for the papers is not found in his answer to M. Etienne, I am wrong ; for the letter ends with this postscript, which, while seeming to say nothing, says everything : "I enclose '*Le Marquis de Carabas*.' I am, after all, only a ballad-monger. . . ." And some time afterwards, when all this mad heat and fury had led to repression, but at the expense of the newspapers, which were placed under censure, he sees in this the opportune moment, a new chance offered to him : "The press is enslaved. Let us fall back upon songs." The die is cast. No more long poems ! He throws them in the fire, or leaves them to moulder in the bottom of a drawer. Henceforth he has no divided aims. He is heart and soul, with all his art—all his motives of self-interest, if you will—devoted to that special class of poetry, not the highest, of which he has made what we all know.

We classify the 141 versions received as follows :—

First Class.—Greenock, Amadan, Secunda, Baboo, Harting, Emil, E.P.A.M., Itol, Mannrauss, Faithlie, Niphetos, Fame is no flower, Dorrit, Sapiens, Lavengro.

Second Class.—Chanson, A.S.G., Woodstock, Helios, K.T., Belcaro, Alpha, Great Western, Carfax, F.E.L., Inconnue, Hibernia, Bavin, Norma, P.R., Si-fait, Menevia, Abertawe, Chatou, Chantclere, Effort, L.L.A., Carlus, Barthwick, Dane, Spitzbergen, Borealis, Une étudiante, Martin, Kussie, L.L.D., Scrouge, Accinctus, Penelope, Boa, Yeldge, Mousmé, Monnow, Fortes et fidelis, M.S., Pat, Nicolette, Amien, C.M.D., Nessko, Scarlet Pimpernel, L., Flip-flap, Gothicus, Smaragdus.

Third Class.—Sim Tappetit, Second Shot, H.I.G.L., Francesca, Fife, Magnet, Arosa, E.M.C., F.A., Gerta, Malaf, L.N., I.M., Fitzthomas, Kisa, Dunelm, Gwellen, Abdita, Buston, G.M.H., Mergy, Goodman, Zibkat, Bizcat, Sirach, Twein, Solange, St. Lô, Tantalum, Roneo, Peer Gynt, H.M.

Fourth Class.—D.D.C., D.U.B., Medwos, Alpha, Samoht, Moriando vivo, Rose, W.R., T.M.O., Smudge, Romanoff, Yvetot, Gammon, U.U.S.S., Bonne Chance, Liber laborum, Bacon, White Scythe, Mardi, Beowulf, M.A.

Transfers and Partnerships are on pages 6, 58, and 63; other School and Teachers' Advertisements are continued on pages 63, 64, 65, 66, 67.

X

I received one indignant protest against the piece set last month on the score that it was impossible to make out without the context. I plead not guilty, and maintain that it is not unreasonable to expect competitors to know of the "Marquis de Carabas," one of Béranger's most famous *chansons*, and, if they did not know, to find out from La Rousse or any French History that the *Chambre Introuvable* was the Miraculous Parliament of 1816, so named by Lewis XVIII as ultra-Royalist. Whether this word and *chanson* and *feuilletons* should be retained is an open question. For the first two fair equivalents can be found, but not for the last. "Middles" comes nearest, but it is too technical a term. In the first sentence there are two pitfalls. *Le malin* is "the rogue" in a playful sense ("wily fellow" is weak), and *le démon* is "the tempter"; "devil" is too strong, and assuredly it was not his "evil genius" that prompted Béranger to write songs. "Capture Fame by another wing" sounds forced in English, and I should slightly vary the metaphor—"pluck a different feather from Fame's pinions." In the next sentence, too, the Prize Version might be improved—"The outburst of Royalism in 1816 had produced in him a reaction," or "He had been revolted by," &c. "So much ridicule" is a *non-sens*. *Il était à l'affût*: the sustained metaphor needs bringing out:—"He was like a sportsman at the covert side; the royalism of the 'Peerless Parliament' flushed the birds for him, and he had only to fire away and had no need to beat the bush." *Refuser le feuilleton*: "to decline the offer to contribute the feuilleton." *Amèment la répression*: "had led to repression" is not clear: "the mad folly of the Government led to a general revolt against it, led to its extinction, but the newspapers which were suppressed by the Censor suffered in the process." *De plus belle*: "even happier than before"; not a superlative. In the last sentence I cannot improve on "Emil," only for "we all know" read "we have seen" (in the previous part of the causerie).

A Prize of Half a Guinea is offered for the best translation of each of the following:—

ECRIT AU BAS D'UN CRUCIFIX.

Vous qui pleurez, venez à ce Dieu, car il pleure.

Vous qui souffrez, venez à lui, car il guérit.

Vous qui tremblez, venez à lui, car il sourit.

Vous qui passez, venez à lui, car il demeure.

—VICTOR HUGO.

Wär' nicht das Auge sonnenhaft,

Wie könnten wir das Licht erblicken?

Lebt' nicht in uns des Gottes eigne Kraft,

Wie könnte uns das göttliche entzücken?

—GOETHE.

Οὐκ ἔθaves, Πρώτη, μετέβης δ' ἐς ἀμείνονα χώρον,
καὶ ναίεις μακάρων νήσους θαλὴν ἐνὶ πολλῇ,
ἐνθα κατ' Ἠλυσίων πεδίων σκιρτῶσα γέγηθας
ἀνθεσιν ἐν μαλακοῖσι, κακῶν ἔκτοσθεν ἀπάντων·
οὐ χειμῶν λυπεῖ σ', οὐ καῖμ' οὐ νοῦσος ἐνοχλεῖ,
οὐ πεινῆς, οὐ δίψος ἔχει σ'. ἀλλ' οὐδὲ ποθεινὸς
ἀνθρώπων ἐστὶ σοὶ βίος· ζῶεις γὰρ ἀμέμπτως
αὐγαῖς ἐν καθαράσιν Ὀλύμπου πλησίον ὄντος.

—MELEAGER.

MOTTO FOR A HYMN-BOOK.

Non vox, vota vocent, non musica chordula, sed cor;

Non clamans, sed amans, cantat in aure Dei.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by January 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

Cloth, pp. xii, 856. Price 7s. 6d.

THE JOURNAL OF EDUCATION

Bound Volume for 1911.

Being the 33rd Volume of the New Series.

43rd Year of Issue.

"The bound volume of *The Journal of Education* for the year just coming to an end is full of valuable and instructive matter. Very readable matter it is, too, for the most part, as furnished by contributors who are not only experts in their respective subjects, but know how to write about them."—

The Guardian, Dec. 22, 1911.

"The collected parts for the past year of that valuable and well known monthly magazine for teachers, *The Journal of Education*. It is the thirty-third of the new series and the forty-third of the old series of the publication. Much of it, no doubt, is of passing interest only; but more than enough of permanent interest remains to make the volume noteworthy, both as a record of the year's happenings in matters of education and as a miscellany of odd contributions to the special literature of pedagogy."—

The Scotsman, Dec. 25, 1911.

"The forty-third Volume of *The Journal of Education* provides its many readers with an almost indispensable storehouse of current educational news and educational theory. The list of contributors includes many of best known names in the educational world; the comprehensiveness of its range is as marked as ever. The monthly notes are always acute, sensible, and pertinent, and the various items of current news excellently arranged and set out. A mere glance at the index evidences the completeness with which it covers the educational field, and we can only say that each annual volume is, if possible, better than its predecessor."—

The Bookseller, Dec. 29, 1911.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

MESSRS. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER OF SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

HOME COUNTIES.—Large, old established, and very successful **BOARDING AND DAY SCHOOL.** Principal retiring. 50 boarders, 10 day pupils. Gross receipts over £3,000. Profit £1,000. Fine premises with field for games. Capital fee accepted on all pupils transferred. Fully inspected and strongly recommended. —T.1135.

LONDON, N.—Old established **BOARDING AND DAY SCHOOL**, with Kindergarten. Principal retiring from the teaching profession. 25 boarders, 60 day pupils. Gross receipts over £1,000. Entire goodwill £600. —T.1157.

SUSSEX. High-class **SCHOOL** for the Daughters of Gentlemen, which is always full, at a desirable seaside resort. Receipts about £5,500; average net profit last three years nearly £900. Entire goodwill, to include most of the furniture, £2,000, or a partnership could be arranged. —T.1146.

KENT. First-class **BOARDING SCHOOL** for the Daughters of Gentlemen, at a favourite seaside resort. 30 boarders, fine premises. Receipts over £4,000. Capital fee accepted on pupils transferred. Partnership would be considered for twelve months in order to give thorough introduction. —T.1148.

CHESHIRE.—High class **BOARDING AND DAY SCHOOL.** 30 boarders, 25 day pupils. Large detached house specially adapted for school purposes standing in an acre of ground; new adjoining for games. Receipts £1,545, profit £140. Any reasonable offer accepted to enable Principal to retire at an early date. School has splendid reputation. —T.799.

SCOTLAND.—The Principal of a high-class **BOARDING SCHOOL** would receive an experienced and well-qualified lady into **PARTNERSHIP** with a view to succession. The school yields a net profit of about £700 per annum. If desired, the Principal would remain a sleeping partner, leaving entire charge and control of the school in the hands of the incoming partner. —T.1132.

S.E. COAST.—High-class **BOARDING SCHOOL** at a favourite health resort. 56 boarders, fees from £60 to £75 per annum. Receipts about £3,000, net profit £1,900. Extremely flourishing school. Goodwill £2,500. —T.1119.

LANCASHIRE COAST.—Transfer of or Partnership in good **BOARDING AND DAY SCHOOL.** 14 boarders, 6 day pupils. Receipts £550, net profit £100. Half share £250; entire school £400. —T.1128.

SURREY.—**BOARDING AND DAY SCHOOL FOR GIRLS**, with preparatory department for little boys. 3 boarders, fees £30 to £80 per annum; 39 day pupils, fees £6 to £12 per annum. Receipts £630, rent £75. Capital fee accepted for goodwill. —T.1066.

YORKSHIRE.—**BOARDING AND DAY SCHOOL.** 48 pupils, receipts £1,150. Splendid premises, including gymnasium, garden of one acre. Entire goodwill, £500, or near offer. —T.242.

DEVON.—**BOARDING AND DAY SCHOOL.** Principal retiring. School established for past 24 years. 12 Boarders, 38 Day Pupils. Receipts £740, profit £140. Capital fee accepted. —T.1082.

NO CHARGE TO PURCHASERS.

Full particulars of the above and others may be obtained on application. Intending purchasers are invited to write stating their requirements. Address—158 to 162 OXFORD STREET, LONDON, W.

A NEW ENGLISH HISTORY.

Just Issued.

THE GROUNDWORK OF BRITISH HISTORY

BY

GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of
"A Brief Survey of British History," &c.

AND

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and full Index.

764 pp., super-crown 8vo, 6s. Also in Two Parts, 3s. 6d. each.

An English History for Middle and Upper Forms, adapted to the methods of modern teaching of the subject, has long been called for. Mr. Townsend Warner's "Brief Survey of British History" has been found well suited to the needs of Lower Forms, and it is hoped that the present work will prove equally serviceable for Middle and Upper Forms.

The subject is treated with the breadth that is now required of senior candidates for University Local and similar examinations, and in full consonance with the views repeatedly put forward in the circulars of the Historical Association; though, be it said, the work has in no way been suggested by these circulars, but is the outcome of the experience of its joint authors, Mr. Warner of Harrow and Mr. Marten of Eton.

The authors have sought to trace out the main threads of British History, omitting small and unfruitful details; to treat events in logical sequence by fixing the attention upon one subject at a time; and to concentrate the mind upon the chief policy or course of action of each age.

Prospectus, giving full particulars, post free on application.

PATON'S LIST of SCHOOLS and TUTORS

Some Opinions from the Colonies.

***The Secretary of the Rand Club,
Johannesburg :***

"I am obliged for the copy of List of Schools, which has been placed in the Library."

The Hon. Secretary, Durban Club, Natal :

"I have to thank you for the copy of List of Schools and Tutors, which has been placed in the Club Reading Room for the information of members."

The Secretary, Mafeking Club :

"I am in receipt of yours of September 29, covering a copy of your publication of List of Schools and Tutors, and beg to thank you for same. I have placed your book in the Reading Room, and feel sure it will be read with interest by many of the members."

***The Secretary of the Canadian Club,
Montreal :***

"I beg to acknowledge receipt of your List of Schools and Tutors for the year 1911, for which I thank you on behalf of the Executive Committee."

***The Hon. Secretary of the Manitoba Club,
Winnipeg :***

"I beg to acknowledge, with thanks, receipt of the copy of Paton's List of Schools and Tutors, Fourteenth Edition."

The Secretary, Vancouver Club, B.C. :

"I have your copy of List of Schools and Tutors, and it shall find a place in our Reading Room."

The Penang Club, Straits Settlements :

"We thank you for the copy of your new List of Schools, which will be put in the Library."

***The Hon. Secretary of the Mombasa Club,
East Africa :***

"On behalf of the Committee of the above Club, I have much pleasure in acknowledging receipt of your excellent book. It has been placed in the Reading Room, and I am sure will be fully appreciated by the married members."

***The Hon. Secretary, Warri Club,
Southern Nigeria :***

"I am directed by the Committee to express their thanks for the List of Schools forwarded to them."

The Secretary of the Hong Kong Club :

"Best thanks for your new List of Schools, which you have kindly presented to the Club."

***The Secretary, St. George's Club,
Grenada :***

"I am in receipt of the copy of your new List of Schools, which has been placed on the Reading Room table for the information of members."

The Prime Minister of Australia :

"I am directed by Mr. Fisher to acknowledge receipt of the copy of your new List of Schools."

***The Manager, Bank of Australasia,
Sydney, N.S.W. :***

"I thank you for the List of Schools, which is very interesting to an old English public-school boy. I will place the List before my business and other friends."

The Archbishop of Melbourne :

"I will make the List of English Schools known in quarters where the information is likely to be needed."

The Bishop of Nelson, N.Z. :

"I beg to acknowledge receipt of your new List of Schools, which I accept with thanks."

Messrs. Frost & Shipman, Perth, W.A. :

"We beg to acknowledge receipt of your new List of Schools, which we have very much pleasure in thanking you for. It seems to us to be a very fine and valuable work, and we shall certainly try and make use of it by the means you indicate, and shall be very pleased to forward your interests in any way. We might say that we are Medical Agents also out here, which brings us in touch very much with the Medical Profession, and in this case your book ought to be very useful."

FIFTEENTH EDITION NOW PREPARING. Particulars on application.

Light. By W. H. TOPHAM, B.Sc., Chief Master of the Army Class, Repton School. 2s. 6d.

Please write for Prospectuses.

LONDON: EDWARD ARNOLD, 41 & 43 MADDOX STREET, W.

THE HEAD MASTERS' CONFERENCE.

THE thirty-ninth meeting of the Head Masters' Conference was held at Sherborne on December 21 and 22. Some fifty members attended, including the Head Masters of Birmingham, Bradfield, Bedford, Cheltenham, Chigwell, Christ's Hospital, Clifton, Harrow, Leeds, Mill Hill, University College School, Malvern, Marlborough, Radley, Repton, Rugby, Tonbridge, Wellington, Uppingham, and Winchester. There were also present as guests the Hon. W. N. Bruce, Mr. Fletcher, and Mr. Headlam, representing the Board of Education. There was on this occasion no gallery of assistant masters. The grand old abbey and fine quadrangle of school buildings were obscured by mist and rain, but the hall with its portraits and busts of former head masters was worthy of such a meeting, and the rostrum from which debaters were invited to speak was a boon to the reporters. Mr. NOWELL SMITH, who presided, in welcoming his fellow masters and guests to this ancient school, referred to the fact that his predecessor, Mr. Harper, had, with Mr. Thring, been the joint founders of the Conference. He had been unable to house all of them close at hand, but if any had difficulty in finding their lodgings, a body of boy scouts was in attendance.

Bible Teaching in Schools.

The Rev. LIONEL FORD (Harrow) moved the first resolution:

(a) "That the report of the Joint Committee of the Head Masters' Conference and the Preparatory Schools Association on Bible teaching be adopted; (b) that this Conference invites the preparatory schools to give the proposed scheme a trial, and to make a beginning in the summer of 1912; (c) that this Conference recommends that the Scripture paper in the Common Entrance Examination from March 1913 onwards be constructed according to the Joint Committee's report; (d) that this Conference recommends that any suggested modifications and improvements of the scheme be considered at the Conference of 1913."

The Committee appointed by last year's Conference had received valuable assistance from members of the Conference and also from representatives of the preparatory schools. The report was in no way an attempt on the part of public schools to dictate their duty to the preparatory schools. Co-operation, not dictation, had been the aim of the Committee. They had to deal with the teaching of the Bible, a subject of vital importance to the religious education of the rising generation, a subject in which there had hitherto been no sort of co-ordination in the method or even ideals of our various schools, a subject in which the efforts and the enthusiasm of individuals had been seriously hampered by congested time-tables and curricula tending to crowd Scripture out or give it an inferior position, and a subject to which, he feared he must add, the British parent and British homes were lending a constantly decreasing support. As they could not touch the homes except indirectly, they must appeal to the preparatory school masters, laying down broad lines on which these schools might be invited to work, and to go into details only so far as was necessary to indicate the direction which those lines might reasonably take, and to furnish guiding posts to those who might find such guidance acceptable. They hoped that in doing so they had left considerable latitude both for restriction and expansion, but they tried to include the vital things for boys in the preparatory school stage. They fixed on the great stories first as the basis on which more intimate knowledge might be built later—in the Old Testament the principal events and personages, in the New Testament the life and teaching of our Lord and the beginnings of the Church. Much had been left out for which young boys might be thought not ready. The Bible was too big and too difficult a Book for the whole of it to be studied at once. Hence the harder portions, such as the Prophets in the Old Testament and the Epistles in the New, had to wait. As to the other omissions it might be thought desirable to make, the proposed Schools Bible would provide for them. They would be disappointed if it was thought they had left out the vital things or that what they had included would not be sufficient to lay a far firmer foundation of Scripture knowledge than the large majority of the boys coming to our public schools now brought with them. They would be disappointed, too, if the reading aloud of the Bible itself did not teach people to appreciate the beauty and glory of its style, and if the learning of great spiritual passages by heart did not teach unforgettable lessons of still deeper value. Having gone so far in suggestions to the

preparatory schools, the public schools themselves were bound to co-operate in their lowest forms by co-ordinating the Scripture teaching in those forms with the teaching given at the preparatory schools. As to tests of Scripture teaching, they had tried to put them into a secondary place. Bible teaching might easily suffer from what Paley called in his "Evidences" "prejudice before examination," a prejudice from which Paley's own work was not wholly exempt. But, taking the Common Entrance Scripture paper as the only available test at present, they were anxious to conform to the spirit and to the general lines of their recommendation, and therefore it should be in the hands of a Continuation Committee who should be able to report suggestions and modifications.

Mr. C. LOWRY (Tonbridge School) seconded the resolution. The report could not claim to have achieved anything very big, but to have made a sound beginning on which a Continuation Committee could build with necessary modifications.

The Whole Bible.

The Rev. J. R. WYNNE-EDWARDS (Leeds Grammar School) raised objection to a note in the report recommending the adoption of the Schools Bible, to be published shortly by the Clarendon Press. However excellent the motives of the promoters, he believed they would utterly fail in their object and do more harm than good. Let them have selections by all means, but not a bowdlerized Bible. He urged the Conference not to give their imprimatur to a work which was tantamount to a declaration that in their opinion the Bible was not a fit book to put into the hands of the young. He moved as an amendment the adoption of the report with the omission of the note referring to the forthcoming Schools Bible to be published by the Clarendon Press.

Canon SWALLOW (Chigwell) seconded. He said he believed in the Bible, the whole Bible, and nothing but the Bible. He did not think it did a child any harm whatever to realize that there were some parts of the Bible which it was not desirable for him to read. He could not see that a small boy's morality was safeguarded by the substitution of "base born" for "bastard." He was quite sure it would be very unwise of the Conference to adopt the note recommending the edition in question.

Canon WATERFIELD (Cheltenham) did not at all agree with what Mr. Wynne-Edwards and Canon Swallow had said, and after some observations from Dr. UPCOTT (Christ's Hospital) and the Rev. W. TEMPLE (Repton), the amendment was agreed to. The other parts of the resolutions were adopted unanimously, and Dr. DAVID (Rugby) moved, and Dr. UPCOTT seconded, the following resolution:—

"That the Joint Committee be requested to assist in setting the Scripture paper in the Common Entrance Examination and to collect and disseminate lists of suitable books and, generally, to watch the working of the report."

This was agreed to.

Proposed Teachers' Registration Council.

Dr. Gow (Westminster) moved:—

"That this Conference congratulates the Board of Education on its decision to create a Teachers' Registration Council, and hopes that adequate provision will be made for the necessary expenses of the Council."

Reviewing the history of the subject he said that the "representative Council" contemplated in the Act of 1907 was that of the Committee of which he had been chairman. The Board of Education took a different view and insisted that every class of teacher must be included. He had in vain protested that a Council so constituted must entail cross division. The word "congratulates" was introduced in the resolution because it was not clear whether the decision of Mr. Runciman was binding on his successor, and it might be that the decision taken in the White paper of last July was no longer operative. Certainly Mr. Birrell twice promised to return the guineas of the teachers who paid for registration in Column B of the old Register. Mr. McKenna took no notice of the promise, and Mr. Runciman repudiated it. The Board of Education said no council was representative of the teaching profession unless every sort of teacher was represented upon it. The Teachers' Council as constituted in the White paper consisted of forty-four members representing the Universities, secondary schools, elementary schools, and technical teachers. As this was going to be rather a large and heterogeneous kind of council it was agreed that the chairman should be outside the number of forty-four. He was bound to say he did not think it would be a very good council. Some of those upon it were to represent places, some classes, some subjects of instruction. Then the balance of voting seemed to him to be bad. Oxford had one vote, Bristol had one vote, the Head Masters' Conference had one vote, teachers of the deaf and blind had one vote, the Froebel Society had one

vote; the head masters in general, numbering six hundred, representing schools of all sorts of different types, had two votes; the head mistresses, who represented half as many schools, and certainly not half as many types of schools, were to have two votes. The Council would require pecuniary assistance. The amount paid to the old Registration Council was about £14,000, and they spent in five years £10,500. The balance was paid over to the Board of Education. The expenses of the old Council were about £2,500 a year, and the new Council would certainly cost more. The Council was not to make a Register, but to report on what would be a good Registration Council. It would exist for three years for the purpose of appointing its successor. Like the guardian of the Golden Bough, it was "the priest who slew the slayer and shall himself be slain." He would have them ponder a speech of Miss Wallas, Vice-President of the Old Registration Council, reported in the December number of *The Journal of Education*. The object of his resolution was that the Council should start with the goodwill of the Head Masters' Conference. At any rate it was a council of teachers, and that Conference would not withhold its sympathy from any council, and it wished that it might work well in the service of the public.

Mr. R. C. GILSON (Birmingham) congratulated the Board of Education on their somewhat late repentance, and hoped it would never be necessary to condole with them on changing their mind again.

The resolution was carried unanimously.

Canon SWALLOW (Chigwell) moved:—

"That this Conference recognizes with great satisfaction the sympathetic attitude of the President of the Board of Education towards the deputation which waited upon him on Tuesday, November 14, and desires to record its belief that an adequate system of pensions and superannuation allowance for secondary teachers is of great national importance, and that such a system should be established without delay."

He felt very little doubt that they would carry the resolution unanimously, because every one liked to look forward to a pension, and those of them who were coming to the end of their careers would like to realize that their successors were better off than they had been themselves. There were a great many reasons why this matter was now looming so large. For a long time a considerable number of head masters and some assistant masters were maintained by the successful hostels which they kept. Then there were also in former days a very large number of head masters and assistant masters, men in Holy Orders, who passed away from the teaching profession to fulfil, with more or less distinction, preferment in another branch of pastoral work. Those times had passed, or were passing away. His experience of the work which Local Authorities were doing to improve the old endowed schools which came within their purview led him to the conviction that they were setting their faces against the payment of anything but a fixed income to their head masters as well as their assistant masters. If the ranks of the profession were to be kept full of the best men they must give the schoolmasters some hope of a competence by the time they reached the age of sixty or sixty-five, so that they might retire from their work, as men in other public services did, without having to go a-begging for an old-age pension or anything of the sort. The proposal had been made that they might make arrangements with insurance offices. That had been tried twenty years ago and failed, and he did not know that any one would go so far as to say that they would like another Insurance Bill at the present time. It had also been suggested that the county council would be the body to which they might at once go for pensions. He did not think that any one would now argue that any superannuation or pension scheme should be dependent on the rate-payer. They might reasonably press for more money out of the rate-payer for the payment of better salaries, but they could not ask him to do anything in the way of pensions. They must go to the Imperial Exchequer for assistance. The demand for a national scheme of teachers' pensions managed at the cost of the State had been formulated at the Conference of Secondary Teachers summoned by the Federal Council and presided over by Mr. Acland. Mr. Pease had been kind enough to receive a deputation on the subject, and he had replied to it that, if they produced a detailed and workable scheme which could be regarded as representing the considered views of secondary and technical teachers, and dealt fairly and satisfactorily with the numerous questions which must necessarily be incidental to any such scheme, he would consider it with a view to approaching the Treasury. He understood he had since approved of a letter which had been drafted by an official of the Board setting forth what these points were. He felt there was sympathy with the profession at the Treasury as well as at the Board of Education.

Mr. W. W. VAUGHAN (Wellington) seconded the resolution. It was ideally drafted, vague, amiable, and committing them to nothing.

Dr. McCURE (Mill Hill) said that in regard to the whole question of pensions they were in a difficult position, because there was no money to fall back upon. In the Scottish scheme there was a fund. As far as secondary teachers in England were concerned, they must be entirely at the mercy of the Treasury. Mr. Pease had put forward a number of exceedingly important and difficult points. He suggested that there should be a committee appointed to consider them and frame answers to some of the difficulties. He was afraid that they would have to make a great deal of very critical inquiry before they were in a position to put answers to some of the questions before the President. Even for a pension of £50 a year a sum of something like £650 would be required. It would be comparatively simple for the State to make arrangements for pensions for masters in State-aided secondary schools, but at that juncture the line of cleavage began to show itself. He feared that head masters would say that they had been brought in under false pretences. Others might profit, but they, or most of them, would go down to the vile dust from which they sprang, unwept, unhonoured, and unpensioned.

Mr. R. C. GILSON (Birmingham) said he did not think it worth while to move an amendment, but he disagreed *in toto* with the motion and with the whole idea of trying to get pensions from the State. Was it seriously supposed that the State was going to provide out of public funds pensions to masters and claim *no quid pro quo*? What the resolution really meant was that secondary teachers, head masters, and assistant masters in English public schools were to be converted into Civil Servants of the same description and type as the Postmaster's people in the Post Offices. He objected to that altogether—to falling from the rank of a professional man into the rank of a telegraph boy. He could see one advantage only in the proposal that pensions should be provided by the State, and that was that it would render easy the transference of teachers from one school to another without an undue sacrifice of seniority and advantages gained in the institutions in which they had served. He did not think it passed the ingenuity of man to provide for that finality of transference without having recourse to the State to pension them. They should be paid enough to enable them to pension themselves; and he could not help thinking that one effect of a Government scheme for pensioning secondary teachers would be to keep down salaries and to provide very inadequate pensions at the end. The whole policy implied was very much like the principle of the penny-in-the-slot gas meter—it enabled you to shirk the duty of saving your pence to pay the gas bill, but the consequence was that in the end you got dearer gas.

Canon JAMES (Malvern) inquired whether by the resolution they were committing themselves to compulsory pensions.

Dr. UPCOTT (Christ's Hospital) moved the previous question. The resolution as it stood was perfectly colourless and valueless, but it suggested what he strongly deprecated, State control. They were not in a prepared state to pass any definite resolution.

Mr. GILSON seconded.

Canon SWALLOW opposed. The Conference had a bad reputation for shelving difficulties by passing the previous question. The matter was urgent, not for rich foundations that did not need pensions and on whom there would be no compulsion, but for the new county council schools and poor grammar schools which were bolstered up by the Local Authority. In these schools a head master was compelled to keep on masters long past their work to prevent their starving.

The amendment was rejected by a large majority.

The Rev. H. COSTLEY WHITE (Bradfield) moved a second amendment, adding after "superannuation allowance" the words "for teachers in State-aided secondary schools."

The Rev. LIONEL FORD seconded. The voting being equal (15 to 15), the chairman declared the amendment lost.

A third amendment inserting the words "provided it be not compulsory," was moved by Mr. YOUNG (Bishop's Stortford) and seconded by Mr. RENDALL (Charterhouse) and defeated by 15 votes to 7. The motion was then put and carried by 20 votes to 6.

The Conference then adjourned for private business.

SECOND DAY.

The Conference reassembled at 10 a.m. on Friday.

The CHAIRMAN read a letter from the War Office expressing the wish for closer co-operation between the Army Council and the masters of schools which are the principal source of the supply of officers. With this object members of the Head Masters' Conference accompanied by the heads of Army classes were invited to visit the Royal Military College, and from September 10 to 24 was regarded as the most convenient date. The invitation was gratefully accepted.

Certificate A.

Canon JAMES then moved a resolution held over from the previous day:—

"That this Conference recommends to the notice of the Universities the War Office Examination for Certificate A, and asks that this Certificate be recognized *quantum valcat* in their Entrance Examinations."

He had sent round a circular letter asking for opinions as to this examination, and the replies received went to show that head masters and officers commanding contingents were well satisfied with the character of the examination as at present conducted. No desire was expressed either to see the examination stiffened or for the standard to be lowered. The only complaint was as to the difficulty of finding time for adequate theoretical training. From the report of the Public Examinations Sub-Committee they would see that a proposal for recognizing Certificate A in the Joint Board Certificate Examinations had been discussed with representatives of the Universities, and that the objection had been raised that the Board had no control over the Army examinations and could not be sure of the standard. He had received a letter from the Director of Military Education approving the resolution standing in his name and pointing out that the Universities could not logically refuse recognition of the A certificate, seeing that they had recently sent a petition to the Prime Minister praying that the O.T.C. certificates gained in the Universities might be recognized in examinations for the Civil Service. The Officers' Training Corps had become a serious factor in their school life. Since the school corps ceased to be "each on its own" and became an integral part of national defence the improvement in them had been no less than marvellous. There was no doubt that the gaining of Certificate A entailed real hard work, not only on the boys, but on the masters charged with their training. Recognition by the Universities of examinations not conducted by themselves already existed. He hoped that the motion would be carried unanimously.

The Rev. H. A. P. SAWYER (St. Bees School) seconded.

Dr. SPENSER (University College School) cordially agreed with Canon James's commendation of organized Cadet Corps, but he pointed out that the motive committed head masters to making important changes in their curriculum. If, as was desired, the Universities accepted Certificate A as a part of their entrance examination it meant that head masters must provide in their curriculum an alternative for boys offering this in lieu of some existing subject. To provide for six or eight extra lessons a week for 220 cadets was a serious matter. He complained that the War Office in their practical examinations did not consult the wishes of head masters and interfered with the work of the school. They had kept eighty of his boys in uniform for two days in order to provide for the examination of fifteen cadets. On the second day they were kept from 10 a.m. to 4 p.m. and returned drenched to the skin. The motto of his Corps was *Cum Marte Minerva*, which he would freely render: There was room for a little common sense at the War Office.

Mr. GILSON (Birmingham) endorsed almost everything Dr. Spenser had said. He had encountered the same difficulties in dealing with the War Office.

Mr. VAUGHAN (Wellington) desired an interpretation of *quantum valcat*. Was it intended that Certificate A should be a substitute for, say, arithmetic, or that it should compensate for general weakness? One merit of the Officers' Training Corps was that the work was all out of school hours. Let them not try to do it in an already overcrowded curriculum.

The Rev. J. R. WYNNE-EDWARDS (Leeds) also deprecated the certificate being made a soft option for the Universities.

The Rev. LIONEL FORD said that opponents of the motion seemed to ignore the fact that the certificate already counted in examinations; two hundred marks were allowed for it in the Woolwich and Sandhurst examinations.

Mr. LOWRY said that many masters looked askance at this allowance, and questioned its relevance to the motion.

Dr. UPCOTT questioned the advisability of encouraging boys to get the certificate at school. A better policy would be to divide the certificate into two parts and take the practical part at school.

Canon JAMES briefly replied, and the motion was carried by 20 votes to 11.

Dr. SPENSER then moved as a rider: "That the Committee be instructed to draw the attention of the War Office to the desirability of consulting the convenience of schools before issuing regulations and making arrangements for the junior branch of the Officers' Training Corps." This was seconded by Mr. GILSON and carried.

A further rider urging the desirability of giving head masters representation on the Education Committee of the War Office in order that the objects in view may be effectually carried out was lost by a large majority.

The Training of Teachers.

Dr. DAVID (Rugby) moved:

"That this Conference welcomes the revival of the Committee on the Training of Teachers; and trusts that its deliberations may tend to encourage and enable all candidates for masterships in secondary schools to take a course of training."

This Committee, of which he had the honour to be Chairman, was the second of its kind. The first had adjourned *sine die* in 1902, when the Registration Council was constituted. At the beginning of the year it had been resuscitated on broader lines. The objects of the Committee were first to ascertain what was going on in the various places where training is now being offered; secondly, what was the view of head masters and head mistresses as to the value of that training, judging from its products; and thirdly, on the basis of those inquiries to suggest a reasonable course for those who desired to take it, particularly in view of what might be suggested to them as regarded time and expense. The Committee had issued a *questionnaire* and tabulated the numerous answers received. The teaching profession did not offer sufficient worldly reward to justify any considerable extension either of time or expense on the part of those who were to prepare themselves for it; but they were anxious to recommend a minimum of training for those who desired to fit themselves for the work of their life before they embarked upon it. They wanted to suggest a chance and to encourage them to take it, not only to enable them to acquire an equipment for their work but to submit themselves to a breath of inspiration. Such training would sift out the unfit and create an abiding interest in teaching as a fine art in the survivors. The probationary year should be a continuation of the work of the training college. No one could tell what line the new Registration Council would take, but if it decided to pursue the work of investigation the Committee would gladly retire in its favour.

Mr. HENDY (Bromsgrove) seconded the resolution. He thought that that question of training, in the larger and wider sense of the word, was really the key to all the work of their profession. Training meant something more than probation. It must include theory—for Englishmen the most important side—philosophy, psychology, and method. The theory was fairly provided for at the Universities, but the difficulty was to get schools of the right type. Practical training should take place in specially selected schools and be conducted by the best experts.

The Rev. W. H. FLECKER (Cheltenham, Dean Close School) asked whether the training was to be taken as a post-graduate course, or by men at the Universities at the time they were preparing for their trips. Honourmen would be fully occupied at the Universities, and could not afford time for such training. But there were others who could do so, and he thought that in cum-graduate training was perhaps the secret of the future of that question.

Mr. GILSON moved as an amendment the deletion of the word "all" from the motion. He did not question the value of such a course as that suggested, but thought they ought to leave a loophole for a master to enter their profession even though it might not have occurred to him as desirable to go through a course of training. In his experience (it may have been unfortunate) the performance of masters as teachers had been in inverse ratio to their proficiency in training. After all, a master sank or swam as a probationer, and some of the high lights in the profession had never submitted themselves to training.

Dr. SPENSER seconded the amendment, which was carried by 13 votes to 11. The motion was then put with the omission of the word "all" and carried unanimously.

The Report of the Curriculum Committee.

Mr. FLETCHER (Marlborough) moved:—

"That this Conference affirms its approval of the report of the Curriculum Committee, as published in the report for 1910, and desires the secretary to forward copies of it to all head masters of preparatory schools, together with a list of those members of the Conference who undertake to carry out its principles in their entrance and scholarship examinations."

He said they wanted to make it clear to the preparatory schools that they meant business. The main reform they had sought to effect was that Greek was not to be begun till a boy had reached a certain standard in English, French, and Latin. The preparatory master was not to be forced or encouraged to turn a boy on to Greek prematurely. No one could fix a definite age at which a boy should begin such and such a subject. What they had to do was to ask themselves what course of education they desired for a boy supposing they had him, as the big day schools often had him, continuously in their care from nine to eighteen, and they had to try by such control as they had over the preparatory schools

period to enforce such a course of education. "No Greek shall be taught before a boy enters a public school" had been recommended to them as a counsel of perfection, but he called it a counsel of weakness. They had gone as far as they could in a transitional stage and agreed to accept a boy who knew no Greek if he was properly educated in other subjects.

Mr. RENDALL (Winchester) seconded the resolution most gladly. One of his chief reasons for doing so was that it was to a large extent owing to the wisdom of his distinguished predecessor that the report was ever issued, and he was very anxious to carry on his wise policy. He hoped they would pass the resolution and make it effective by sending a list of head masters who were prepared to work on its principles to the preparatory schools.

The motion was carried by acclamation.

Civil Service Examinations.

Mr. LOWRY (Tonbridge) moved:—

"That this Conference is not satisfied with the examination for junior appointments in the Civil Service and with the prospects of successful candidates."

It seemed to him that there was great danger at this moment of this half-century being known as the half-century of ignoble ambitions. There was an increasing number of parents of boys whose ambition was that they and their sons should become pensioners at a tolerably early age. His quarrel with this examination was that it was too good an examination. It was extremely well drawn up originally and it was still being improved and improved. The practical question was: Are we justified in encouraging the ordinary boy to go in? The proportion of successful candidates had decreased from one in six to one in eleven, the prospects of promotion were exceedingly small, and, moreover, the salary prospects were going to be very meagre in most of the offices, and the increase in the number of officials might also tend to increased economy. He had come across boys who secured appointments, and were well placed for the first two or three years. They found that the prospects were rather gloomy and tried to get away from the office, or to add to their emoluments by insurance agencies and so on. He thought that was very undesirable for boys who had been rather too well educated for the task which they had to perform and who had had an ambition which was rather too mean.

Dr. UPcott seconded the resolution.

Dr. GOW said that since the last Committee they had received a letter from the Civil Service Commissioners asking them to appoint representatives to sit with the Commissioners in considering those very examinations, and the Committee had appointed Mr. Lowry and himself to do this work.

The resolution was carried unanimously.

The next meeting of the Head Masters' Conference will be held in London on Friday and Saturday, December 20 and 21, 1912. At present it is not contemplated to hold it at a public school. The following have been elected to the Committee for 1912:—Dr. David (Rugby), Mr. Gilson (Birmingham), and the Rev. W. Temple (Repton).

A NOBLE FOE.

Wednesday being all Saints' Day, Emir Arslan, an Arab Deputy in the Turkish Parliament, laid a magnificent wreath on the tomb of the Italian soldiers who were killed in the Crimean War. The tomb, which is every year covered with flowers by the officers of the Italian *stationnaire*, had remained this year without flowers.—*Times*, Nov. 3, 1911.

WAR comes with diverse gifts in either hand—

The gifts of life and death, of heaven and hell—

Those heavenly gifts that none may buy or sell,

Those hellish gifts for ever contraband,

Those powers that all the hosts of God withstand—

While, wafted over fields of asphodel,

Come deathless whispers of a fight won well

By thoughts that leave their footsteps, not in sand,

But graven in deeds—pure thoughts that vanquish Hate!

Thoughts, that upon a hostile tomb could spend

Earth's rarest flowers, 'mid news that would drag down

Low souls to vengeance, now will consecrate

Fresh hope of that far goal when wars will end:

Love wreathes the gift in His immortal crown.

—ANNIE MATHESON.

CORRESPONDENCE.

HOUSECRAFT AND SCIENCE TEACHING.

To the Editor of The Journal of Education.

DEAR SIR,—We thank Miss Hartle for her interesting letter, and may we also say how gladly we welcome any discussion on that very vital point—the method of teaching science?

Happily nowadays the value of physical science as a means of training is fully recognized by all educationists, and in the curricula of most primary and secondary schools and training colleges elementary science is rightly given a place. The aim of all science teaching is to train the mind in habits of observation and of clear reasoning, and we teachers have this object in view in making our schemes of work and in giving our lessons. The question raised by Miss Hartle seems to be: Can the science of housework be so taught that it attains this end, or can it not? We think that it can.

In a short letter such as this it is quite impossible to give a detailed scheme of work and to show how we would develop it, but perhaps we may take an illustration. Almost every elementary chemistry course includes at an early stage the study of chalk and of washing soda. The action of heat, water, and dilute acids on chalk is observed; the gas formed by the action of dilute hydrochloric acid on chalk is collected and examined, and it is found to extinguish a lighted match, to be slightly acid to litmus, and to be heavier than air. Later on it is found that on passing the "chalk gas" into lime water, chalk is formed. When the effects of dilute acids on washing soda are studied again, effervescence is observed. The gas is found to extinguish a lighted taper, to be slightly acid to litmus, and heavier than air. The similarity to "chalk gas" is at once noticed, the lime-water test is applied, and the class deduces quite rightly that soda and dilute acids make "chalk gas." The first lesson on the proteids is generally the study of white of egg. The class sees that the first effect of heat is coagulation; then remarkable changes take place, and alkaline gas is given off. The white also coagulates when heated with water, and it is quite apparent that the change takes place at a definite temperature. When this temperature is determined our classes generally have answers varying from 64–70° C. Dilute acids and some salt solutions (noticeably copper sulphate) also cause coagulation.

In a later lesson on the proteids lean meat is studied. On heating alkaline, gas is given off. When put into cold water it is quite evident that something is dissolving from the meat. It is evident also that this solution, whatever it may be, does not take place when raw meat is put into boiling water and the water kept boiling. The possibility of proteid being present is at once seen, and the quickest way of obtaining a solution—by warming in water below 60° C.—suggested. When the meat has been so treated for about two hours, a clear brown liquid can be filtered off. This liquid coagulates on heating. Dilute acids and copper sulphate solution also cause coagulation. The temperature is again found to be between 64–70° C. The fact that lean meat contains proteid seems to us to be deduced by a process of reasoning exactly similar to that which led to the identification of "chalk" gas from washing soda.

The fact that the science of cookery is still in its infancy, and there is no literature on the subject, seems to us to be no reason why students should not be taught the scientific explanations of the methods of housework so far as they can discover them. They will never learn any proteid formula, but our students are, for the most part, equally incapable of understanding why the formula for carbon dioxide is CO_2 .

Concerning the teaching of organic chemistry in elementary schools, we see no reason why lessons on the fats and soaps should not be given, provided that the school has a science room, and that the science can be begun when the children are five or ten years old. A few weeks ago we had the pleasure of visiting a good L.C.C. school and of hearing a lesson on fats and soaps. The obvious properties of the fats were studied

by girls of thirteen or fourteen. When the effect of water had been tried, every child in the class knew that the test-tubes were to be cleaned with washing soda and hot water, and no one failed to see the soap lather formed. No child had the slightest idea that soap was a sodium salt, and it seemed to us quite unnecessary to give that piece of information, though the teacher was perfectly aware of the fact.

The last point raised by Miss Hartle involves a discussion on the question of specialization, which does not come within the limits of this paper. But, perhaps, we may say that there seems no reason why the teacher who has taken an optional course in housecraft at a training college should not be as competent to teach her subject in an elementary school as the history or English teacher who has a similar qualification.—We are, dear Sir, yours faithfully,

LUCY HALL,
IDA GRÜNBAUM

(Science Lecturers, Avery Hill Training College).

HISTORY IN OXFORD LOCALS.

To the Editor of The Journal of Education.

DEAR SIR,—Will you allow me space to consider briefly Mr. Hawtrey's reply to my letter on the above subject? Of course, there is right on both sides of every question (though I would not go so far as to say that "both sides are right"!), and Mr. Hawtrey's points in defence of the Oxford Local syllabus are quite reasonable—that one must look forward to the Higher Locals and possibly to the Historical Tripos; that in handling a short period there is danger of getting it out of perspective among others of equal importance; that young pupils cannot grasp principles, and should therefore be equipped with facts; that life itself is not long enough to complete one's education in (though I hardly see what bearing this has upon the question in hand).

But all these points appear to me to ignore the main issue, which is that a great educational principle is being violated owing to the demand of the syllabus. No excuse for that violation is of any real value—either make the tree good and its fruit good or the tree corrupt and its fruit corrupt. The tripos, the other periods, principles, life itself will be safe and good if from the beginning the teacher will study and abide by the laws of growth and development; and I do not gather that Mr. Hawtrey has taken much account of these in his criticism of my letter.

The law to which I particularly refer in this instance is that growth proceeds always from the particular to the general, from the percept to the concept. That process is at work from the very beginning. The child is acquiring the material of thought, and thinking thereupon; he is mentally constructing his world as he assimilates the elements of which it is composed, and it is a teacher's duty, as it is a gardener's, very serviceably to promote the operation of this law. It is not that at an early period the pupil acquires and at a later digests; the child is all along building up his mental as he is his physical substance, and the digested material of one day becomes the raw material along with new matter of the next. All I, as a teacher, have to do—all I can do effectively (a very important consideration) is to study and promote this process and leave the perfect man to take care of himself. The tripos will be safe, but, what is more, the *citizen* is safe. I provide for the continuance of growth—that is, of education—to the end of life.

Now these long, complicated periods proposed for children of from fourteen to sixteen years of age render the application of this law impossible. The really important events are far too numerous to allow the pupil to bite up and digest any one of them; they can be lodged in the memory, like grass in the ruminant's paunch, but they cannot be chewed; that is, so far as the child's mind is concerned, they remain isolated, undigested, although a professorial instructor (*not* a teacher) may supply ready-made indications of their coherence; they remain facts (though I hardly like to dignify them even with that name) and do not become part of the substance of the child; they are valueless for the building up of either a citizen

or a man; and the lack of really intelligent permanent interest (not of mental excitement, which is evanescent) on the part of many pupils, wrongly put down as "dull at this subject," is proof that growth is not going on and that the teacher is failing in his work.

Now the former shorter periods, including special study of a definite group of events, did admit of the kind of teaching I have indicated. I envy Mr. Hawtrey his retention of his pupils till the age of eighteen. We live in different worlds, and I am afraid mine is a larger one than his; but the age of leaving does not make the smallest difference to the principle of growth. A well educated child's power of "integration" in every case begins to become strong at about thirteen years of age, and one can only say that the longer one can keep him the larger may become the periodic scope. The shorter periods for the younger pupils that they may gain the power to apprehend the longer, but the ready-made "review" to show "how it goes" (when the detail has to be supplied along with the review), is a topsy-turvydom of mental culture which altogether neutralizes the power to grasp principles.

Finally, let me insist that our purpose in teaching history is not a tripos nor even a knowledge of historical data and sequences as such; it is practical morality and citizenship. Several of our greatest historians have been our very finest citizens, and any course or method of teaching that does not tend to develop the power of a man to act and judge on principle "in the middle of things" is out of touch with life and educationally unproductive. Political and social principles can only be grasped by living for the time being in the middle of past ideas and events, realizing their mutual relationships and understanding—feeling—in what consequences good and evil they issued. Such study must be done by way of detail and reflection, not of extensive ready-made reviews, and it demands time and labour and constant reference to practical life. But it is the kind of treatment that engages the permanent interest, not of one or two, but of every member of a class, simply because every boy and girl is a potential man and woman.—Thanking Mr. Hawtrey for his interesting letter, I remain, dear Sir, yours truly,

W. STANLEY ANDERTON.

Upholland Grammar School, near Wigan.

"HIGH SCHOOLS FOR GIRLS: GERMAN v. ENGLISH."

To the Editor of The Journal of Education.

SIR,—I was much interested in the article published under this heading in *The Journal of Education* for December. In it a German school is described with unfavourable comments. The daily time-table, the sleeping arrangements, the supervision by mistresses in free time, all correspond so exactly with the customs of the school where I spent two happy years that I am sure Miss Ried and I have been viewing the same object from different points of view. May I try to show the other side?

Perhaps on ordinary working days a little more exercise might have done us good; but on Sundays we were out more, and during the summer we had four times a week half an hour's bathing in an excellent swimming bath. This half hour was taken from preparation time. Moreover, during the summer few weeks passed in which we did not go for a delightful *Kaffeespaziergang*, which often lasted from one to half-past six or seven. Good walkers had abundant opportunity of showing their powers, yet every care was taken that no girl need overtire herself. From these excursions more than one girl dates her delight in long walks, and during them we were taught—indirectly, perhaps, and more by example than precept—to keep our eyes open and enjoy the beauty around us.

The hours during which we worked, or were supposed to work, were undeniably long; Miss Ried has, I believe, stated them correctly. But the pace was easy, and I do not think we were overworked. Almost all of us had a time-table specially modified to our individual needs; very few of us took

every lesson, and the time we saved we could devote either to extra practice or to reading story-books. Of course English reading was forbidden, and we considered ourselves "on our honour" to keep this rule; but after a very few months to read a German book from the school library was a recreation and not a task. Younger girls would be more likely to take the whole curriculum, and would, moreover, feel in a greater degree the strain inevitably caused by learning all lessons in a foreign language, and for this reason I agree with Miss Ried that girls under sixteen are better in an English school.

The school hours, of course, included all work—music, painting, drawing, sewing, fancy work; and at some of these lessons we were allowed to talk to each other, so that any strain of brain work was relaxed. No book work was exacted from us in the afternoons. Holidays were frequent, and *Geburtstagsfeier* and other little treats often relieved the monotony of school life. Personally, on the few occasions on which I was behindhand with my schoolwork, I found nothing but kindness and consideration from any mistress.

This brings me to the point on which I most strongly differ from Miss Ried—our relations with the mistresses. No mistress with whom I ever came in contact ignored the difference in our characters or attempted to knead us all into the same shape. I never found my word doubted, nor that of any girl who had not shown herself untrustworthy. If there was any cheating at lessons, I knew as little of it as the mistress; I can remember no instance of it, but I had little experience of the lower school, and there the standard of honour may have been less satisfactory. We were not often alone, and I consider that the supervision was excessive; but I do not think most of us felt it as a great hardship, and in the upper school it was to some extent relaxed. On the whole, we were certainly fond of the "gorgons" who "spied on us at every turn"; after an absence of twelve years I still correspond with two; there is not one whom I should not meet with pleasure; and the best friend I have was a mistress there. I am sure that my experience is not exceptional. I do not pretend that my dear old school was perfect, but many English girls were happy there, left sorrowfully, and remember it with affection.—Yours faithfully,
MABEL M. SPEAR.
Springfield, Entry Hill, Bath.

WOMEN STUDENTS IN UNIVERSITY OF DURHAM.

To the Editor of The Journal of Education.

SIR,—My attention has been called to an article by Mr. Sydney Walton in the December number of *The Journal of Education* which bears on the position of women students in the Durham Branch of the University of Durham. Its effect is to imply that home students, who now form the majority of Durham women students, live in lodgings in the city. This suggestion is likely to do harm, implying as it does that women students at Durham may live in lodgings. This is not the case. According to the regulations of the Durham Colleges, all women students under their jurisdiction must live either (1) in the Hostel or (2) at St. Hild's or (3) at home, which term includes such friends' houses as the Council of the Durham Colleges may in any particular case decide to approve.

As a matter of fact, most of these home students are members of St. Hild's Training College, where, under the able management of its Principal, Miss Christopher, they have certain advantages attaching to a training college, but not obtainable at the Hostel, which is only a place of residence. Next term all the women students at Durham will be either members of St. Hild's Training College or of the Hostel, save five or six who reside with their parents.

I should be obliged by your inserting this letter in your January number to correct the mistaken impression about women students in Durham which might otherwise be produced by Mr. Walton's article.—Yours very truly,

JOHN S. G. PEMBERTON,
President of the Durham Colleges in the
University of Durham.

December 15, 1911.

HORACE MARSHALL AND SON

ENGLISH HISTORY IN ENGLISH POETRY From the French Revolution to the Death of Queen Victoria.

By C. H. FIRTH, M.A., LL.D., Regius Professor of Modern History in the University of Oxford. Annotated. Price 2s. 6d.
Containing a long and valuable introduction, dealing with the manner in which the poetry of the period may be used to illustrate its history. For use in the Upper Forms of Secondary Schools.

COLONIAL HISTORIES.

This series is intended to supply the need for short interesting histories of British Colonies and Dependencies, suitable for the Upper Forms of Schools, and for Training Colleges.

1. **AUSTRALIA.** By THOMAS BATESON, M.A., Director of Education to the Waterloo with Seaforth Education Committee.
2. **CANADA.** By C. L. THOMSON.
3. **INDIA.** By M. A. HOLLINGS, M.A. Price 1s. 6d. each.

THE BRITISH ISLES.

By E. M. HUGHES, M.A. (Dublin), Oxford Honours School of Natural Science. Price 1s. 6d.
As far as possible the text has been arranged so as to lead the pupil to draw conclusions from his own observation, or from presented facts.

THE POETRY READERS.

Edited by ALFRED PERCEVAL GRAVES, M.A., formerly one of His Majesty's Inspectors of Schools.

- Each part, cloth bound, 96 pages.

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

To the Editor of The Journal of Education.

DEAR SIR,—I thank you for calling my attention to a letter signed by a number of women students of Durham University and protesting against the tenor of the article which appeared in your December issue. I need hardly say that I wrote without any personal grievance, but with a strong feeling that worthier provision ought to be made for women students in the University. The feeling is by no means recent—it dates from student days in University College. Each year has strengthened this conviction, and I have in possession a bundle of documentary evidence such as might startle the signatories of the manifesto; but for the present I refrain from publication, inasmuch as a Committee is now sitting on the question of the Hostel. I have offered to attend. It would be easy, I think, to gather as many names in support of the article.

—Yours faithfully,
SYDNEY WALTON.

"BLUNDERERS."

To the Editor of The Journal of Education.

DEAR SIR,—In your report of the Association of University Women Teachers' meeting at London University, Mr. Storr begins with the statement that he spoke "as one of Miss Hodgson's 'blunderers,' having stood for six years on the treadmill by Miss Wallas's side." In your report of my speech there is no reference to the matter. What I said was perfectly harmless, and I carefully avoided allotting blame to any one. I thought at the time that my remark was twisted unfairly. Now that in print you make it appear that I blamed persons definitely, I ask your courtesy to let me recall the facts. I quoted an observation made by my cousin, Father George Tyrrell, in "Hard Sayings," to the effect that "it is the nature of man to learn through blundering," and I added that, if it seemed a melancholy view of human progress, it offered much hope for the Register, since there had been enough blundering over that to justify us in hoping that we now know quite nicely how to proceed. Anything more inoffensive in the way of a jest could hardly be framed. It is not an important matter in itself, but it is important to me that I should not be made to seem discourteous to any one whom I have known for so many years and for whom I have so much respect as Miss Wallas.—I am, faithfully yours,

GERALDINE E. HODGSON.

University of Bristol, December 2, 1911.

[The context clearly shows that the term "blunderers" was meant as a compliment, and that it was so understood our "Occasional Note" on Miss Wallas's speech proves.—ED.]

WOMEN AND EXAMINATIONS.

To the Editor of The Journal of Education.

SIR,—As one who has had nearly twenty years' experience in teaching girls, and who has had opportunity both in England and in the United States of seeing the practical results of more than one examination system, will you allow me to comment on a statement made by your special reporter in his account of Principal Hadow's speech at the Leeds Meeting of Secondary Teachers? After an epitome of Dr. Hadow's defence of examinations the report continues: "All which may be quite true about boys and youths and quite untrue about girls." If it is "quite untrue about girls" the fault lies not with the examination system as such, but with the teachers. Of course, it is possible to carry the cult of examinations to absurd lengths—I have no desire to see English as well as American "graduates" of the kindergarten—but if they are taken, as they should be, merely as a useful part of the ordinary routine of education, they provide a valuable stimulus without necessarily proving an excessive strain. If parents insist on judging a school purely and simply by its examination results, the head mistress is naturally tempted to exaggerate their importance, consciously or unconsciously to make candidates feel that the honour of their school is at stake, and so to produce an unnatural and unwholesome excitement, but I believe that this tendency—which undoubtedly did exist—is rapidly decreasing. There was a time when the girl or woman who entered for an examination was a marked person, when failure meant a sneer at the intellectual capabilities of woman with a capital W; but this has long ceased to be the case. The familiar story of the porter who stepped up to an invigilator when the first woman admitted to the London B.A. was taking her examination, and remarked in an audible and awe-

struck whisper, "There's a female in the next room, sir, if anything should occur," is ancient history. There is no reason why "anything should occur," and my own experience of University examinations for women goes to prove that while an honours examination must entail some strain upon men and women alike, the women show a growing tendency to take their "schools" quietly, and the value of having a definite goal towards which to work is incalculable.

GRACE E. HADOW.

Foss Lodge, Cirencester.

DOMESTIC SUBJECTS AND SCIENCE.

To the Editor of The Journal of Education.

SIR,—The letter of H. J. Hartle, of the Homerton Training College, Cambridge, in your issue of December last, is typical of the attitude adopted towards domestic subjects by what may perhaps be called the Cambridge school. Admittedly, the difficulties presented by the science of cookery and laundry work are very great, if one expects to see the ultimate goal before making a start! But, because a mariner bound for the North encounters storms, must he perforce absolutely give up the attempt or steer West? Until a spirit of compromise prevails, progress in domestic science will be but slow. Personally, I see no reason why an excellent course of domestic science cannot be worked through by sixth and seventh standard girls in elementary schools, the higher forms of girls' secondary schools, and all students in training schools, without even a previous elementary science knowledge, desirable though this latter may be. Pure and applied science may be so deftly interwoven that interest is maintained throughout, and the ground covered in both is considerable, and strictly educational.

Believing that this combination is desirable and achievable, I have attempted to indicate such a course in a little book written for Mr. Heinemann, which will probably be on the market by the time this letter is perused by your readers.

R. HENRY JONES.

Head of the Chemical Department, Harris Institute, Preston, and Lecturer in Science, Training School of Domestic Science, Preston.

TEACHERS' GUILD INSURANCE SCHEME.

To the Editor of the Journal of Education.

SIR,—The Teachers' Guild of Great Britain and Ireland is establishing for teachers of all grades, men and women, a Friendly Society for Insurance against accident and illness, as the outcome of the passing of the National Insurance Act. It will be possible to obtain benefits in accordance with the Act or greater benefits at the desire of the person insuring. Additional privileges will be granted to those who are members of the Teachers' Guild. The Scheme will be registered very shortly for approval by the Insurance Commissioners. Any persons interested in this scheme should communicate with the General Secretary, Teachers' Guild, 74 Gower Street, W.C.—I am, Sir, yours faithfully,

F. FAIRMAN, General Secretary.

PATON'S LIST of SCHOOLS and TUTORS

Some Opinions from the Colonies.

The Bishop of Ballarat :

" I have found your List of Schools interesting, and should I meet parties anxious for the useful information it contains, I shall feel it a pleasure and a duty to communicate it."

The Manager, Commercial Bank of Australia, Ltd., Perth, W.A. :

" The publication is a handsome one, and I shall have pleasure in bringing it under the notice of those clients to whom I think it may be of interest."

Messrs. W. Crosby & Co., Merchants, Melbourne :

" We thank you for your new List of Schools, which we have no doubt will prove of considerable interest to some of our business clients."

Messrs. Dalgety & Co., Ltd., Sydney, N.S.W. :

" We shall have pleasure in using the information your book contains for the benefit of our clients."

Messrs. McIlwraith, McEacharn & Co., Ltd., Adelaide :

" We trust the book will be useful both to ourselves and our clients."

Messrs. Chas. H. Smith & Co., Merchants, Launceston, Tasmania :

" The book is duly to hand, and has been perused with interest. It will be kept in the Office, and will be at the service of any client who is in want of information as to what Schools are available in England. We must congratulate you on the way in which the book is got up."

The Manager, Bank of New South Wales, Melbourne :

" We found the book very interesting, and it should be of great service to parents who desire to give their children a ' Home ' education."

The Librarian, Free Public Library, Auckland, N.Z. :

" The volume will have a prominent position in the Auckland Public Library, and will, I feel sure, prove of great service to our numerous readers."

The Manager, National Bank of Tasmania, Ltd., Launceston :

" We note that the List of Schools contains a large amount of information, and we shall be pleased to bring it under the notice of our clients."

Messrs. Webster & Sons, Ltd., Hobart, Tasmania :

" We shall be very pleased to place this volume on file, and to afford any information to those interested. Your book certainly furnishes the fullest details which could be required."

The Librarian, Canterbury Public Library, Christchurch, N.Z. :

" I have the honour to acknowledge receipt of your List of Schools, and to thank you for the same on behalf of the Library Committee."

The Bishop of Newcastle, N.S.W. :

" Your List of Schools is beautifully got up, and should be of the greatest assistance. It is interesting to see the splendid buildings which are devoted to education."

The Librarian, The University of Sydney, N.S.W. :

" I am directed to tender to you the best thanks of the Senate for this valuable donation."

The Norddeutscher Lloyd Steamship Co., Sydney, N.S.W. :

" We shall keep your List of Schools in our office, and should we receive application for particulars of English Schools, we shall have much pleasure in showing your book to the inquirers."

The Bishop of Tasmania, Hobart :

" I beg to thank you for the copy of List of Schools. The idea is a good one, and well carried out."

Member of the House of Assembly, Newfoundland :

" I am much obliged to you for your courtesy in forwarding me the very handsome volume, which I shall no doubt be able to turn to practical use among my friends."

ENGLISH LITERATURE.

Its History and Significance for the Life of the English-speaking World. By WILLIAM J. LONG.

582 pages. Price 5s. net.

A direct, simple, and interesting account of the great English writers, their works, and the literary periods in which they are included. The quotations, outlines, summaries, historical introductions, complete indexes, and a good working bibliography, will be found of inestimable value to students.

THE MOTHER TONGUE.

By G. L. KITTREDGE and S. L. ARNOLD.

BOOK I.—Specially revised for use in English Schools by JOHN W. ADAMSON, B.A., Professor of Education, King's College, London. LESSONS IN SPEAKING, READING, AND WRITING ENGLISH. xiv+294 pages. Illustrated. Price 1s. 6d.

BOOK II.—ELEMENTARY ENGLISH GRAMMAR, WITH LESSONS IN COMPOSITION. xxii+417 pages. Price 3s.

BOOK III.—ELEMENTS OF ENGLISH COMPOSITION. xx+431 pages. Price 4s. 6d.

AN ILLUSTRATED SCHOOL GEOGRAPHY.

By A. J. HERBERTSON and A. E. FRYE.

Large 4to, 263 pages. Price 5s.

Contains nearly 700 Illustrations and Diagrams, about 50 Outline and Relief Maps, and 16 pages of fully coloured Maps.

ELEMENTARY PHYSICAL GEOGRAPHY.

By W. M. DAVIS.

401 pages. Illustrated. Price 5s. 6d.

Based on the author's "Physical Geography," with the addition of practical exercises and more space devoted to the atmosphere.

PRACTICAL EXERCISES IN PHYSICAL GEOGRAPHY—with Atlas.

By WILLIAM MORRIS DAVIS.

Text 148 pages, price 2s. Atlas 50 pages, price 1s. 6d.

The object of this manual is to provide a series of systematic and disciplinary exercises in Physical Geography in order that the student may approach the subject through practical work in the laboratory as well as through lessons in a text.

A FIRST COURSE IN PHYSICS.

By ROBERT A. MILLIKAN and HENRY G. GALE.

488 pages. Fully Illustrated. Price 5s. 6d.

The book is a simple objective presentation of the subject as opposed to a formal and mathematical one. It is intended for high-school pupils, and is adapted in style and method of treatment to the needs of students between the ages of fifteen and eighteen. It specially emphasises the historical and practical aspects of the subject, and connects the study very intimately with facts of daily observation and experience.

MADAME BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated persons as Teachers of Scientific Physical Education. The Course of Training conducted by a large and experienced staff of teachers, extends over two years. It includes the Study of Anatomy, Physiology, Hygiene, Aerobics, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Exercises, Dancing, Outdoor Games, and Medical Massage and Massage. At the end of the Course examinations are held and certificates of theoretical and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, and is built on the confines of an extensive tract of land of an hour from town. It stands in its own grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Ground, Lawn Tennis Courts. The Indoor Gymnasium, 7 ft. by 35 ft., and the Medical Gymnasium, 5 ft. by 25 ft., lofty and well ventilated, are really in the most perfect style, all the apparatus being well designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand acres of land for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply to THE SECRETARY.

MADAME BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS. Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.
Members of this Union as Teachers in Schools, and the discriminating choice is exercised, and the exact requirements of each School are considered. PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

MESSRS. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

HOME COUNTIES.—Large, old-established, and very successful **BOARDING AND DAY SCHOOL.** Principal retiring. 50 boarders, 100 day pupils. Gross receipts over £3,000. Profit £500. Fine premises with field for games. Capitation fee accepted on all pupils transferred. Personally inspected and strongly recommended. —T 1,158.

LONDON, N.—Old-established **BOARDING AND DAY SCHOOL.** with Kindergarten. Principal retiring from the teaching profession. 5 boarders, 60 day pupils. Gross receipts over £1,000. Entire goodwill only £400. —T 1,157.

SUSSEX.—High-class **SCHOOL** for the Daughters of Gentlemen, which is always full, at a delightful seaside resort. Receipts about £3,500; average net profit last three years nearly £900. Entire goodwill, to include most of the furniture, £2,400, or a partnership could be arranged. —T 1,146.

KENT.—First-class **BOARDING SCHOOL** for the Daughters of Gentlemen, at a favourite seaside resort; 36 boarders; fine premises. Receipts over £4,000; capitation fee accepted on pupils transferred. Partnership would be considered for twelve months in order to give thorough introduction. —T 1,148.

CHESHIRE.—High-class **BOARDING AND DAY SCHOOL.** 8 boarders, 25 day pupils. Large detached house specially adapted for school purposes standing in an acre of ground; field adjoining for games. Receipts £1,545, profit £130. Any reasonable offer accepted to enable Principal to retire at an early date. School has splendid reputation. —T 799.

SCOTLAND.—The Principal of a high-class **BOARDING SCHOOL** would receive an experienced and well qualified lady into **PARTNERSHIP** with a view to succession. The school yields a net profit of about £700 per annum. If desired, the Principal would remain a sleeping partner, leaving entire charge and control of the school in the hands of the incoming partner. —T 1,132.

S.E. COAST.—High-class **BOARDING SCHOOL** at a favourite health resort. 56 boarders: fees from £60 to £75 per annum. Receipts about £3,000; net profit £1,900. Extremely flourishing school. Goodwill £2,500. —T 1,139.

LANCASHIRE COAST.—Transfer of or Partnership in good **BOARDING AND DAY SCHOOL.** 14 boarders, 6 day pupils. Receipts £550, net profit £100. Half share £250; entire school £400. —T 1,128.

SURREY.—**BOARDING AND DAY SCHOOL FOR GIRLS,** with preparatory department for little boys. 3 boarders, fees £30 to £80 per annum; 39 day pupils, fees £6 to £12 per annum. Receipts £630; rent £75. Capitation fee accepted for goodwill. —T 1,066.

YORKSHIRE.—**BOARDING AND DAY SCHOOL.** 48 pupils, receipts £1,150. Splendid premises, including gymnasium; garden of one acre. Entire goodwill, £500, or near offer. —T 242.

DEVON.—**BOARDING AND DAY SCHOOL.** Principal retiring. School established for past 24 years. 12 Boarders. 38 Day Pupils. Receipts £740, profit £140. Capitation fee accepted. —T 1,082.

NO CHARGE TO PURCHASERS.

Full particulars of the above and others may be obtained on application. Intending purchasers are invited to write stating their requirements. Address—158 to 162 OXFORD STREET, LONDON, W.

DANCING.—MISS CHEEK, member of the Imperial Society of Dance Teachers. Ballroom and Fancy Dancing. Special terms for Schools. Terms, &c.—The Peldon, Sheen Road, Richmond, Surrey.

MENTHOLIN PASTILLES

RELIEVE TIRED THROATS.

Used as directed, the vapour of their ingredients (Menthol, Eucalyptus, Creosote, Formaldehyde) is brought into contact with the whole mucous tract of the throat and nose, immediately removing congestion.

In quarter-pound boxes, 1/4 post free, from—
EDMUND WILLCOCKS, Pharmacist,
3 BROADWAY, LUDGATE HILL, E.C.

SAMPLE FREE on receipt of stamped envelope.

CORRESPONDENCE LESSONS.

MISS A. W. GREGORY, L.L.A., Coaches orally and by correspondence in History and Literature, Anglo-Saxon, French, and German for the Higher Local, Holloway Scholarship, and other University Examinations, &c. Terms moderate. Apply—3 Ickburgh Road, Upper Clapton, N.E.

TEACHERS and Students living in the country and wishing to qualify for Ablett's Teacher Artist Certificate will be greatly helped by taking CORRESPONDENCE LESSONS with a lady who has passed all the R.D.S. Examinations and has had considerable experience and success in teaching and coaching. Address—ARTIST, 13 Great Russell Street, London, W.C.

RESIDENCE for Students, Teachers, and other ladies. Full or partial board, single and double rooms. References exchanged.—Miss H. VITCH-BROWN, 9 Burton Street, Tavistock Square, London, W.C.

THE JOURNAL OF EDUCATION
Volume for 1907.—A few copies of this volume, which has been "out of print" for some time, are now on hand. These are practically "as new," and can be supplied at usual price of 7s. 6d. each, through any Bookseller.

MATERIAL for NATURE STUDY, BOTANY, and PAINTING LESSONS supplied. Accommodation for Reading and Nature Study Parties.—Miss MERRY, Ighite Wood, Crawley.

X Other Transfers and Partnerships are continued on pages 92 and 128; other School and Teachers' Advertisements are continued on pages 92, 93, 131, 133, 134, and 135. **X**

SCHOOL TRANSFER AGENCY.

(Established
1833.)

Proprietors—Messrs. GRIFFITHS, SMITH, POWELL & SMITH.

Offices—34 BEDFORD STREET, STRAND, AND 22 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.

Schools Transferred and Valued. No charge whatever will be made to Vendors of Schools or School Partnerships, by Messrs. Griffiths, Smith, Powell & Smith, unless a sale is effected or agreed upon.

SPECIAL NOTICE TO VENDORS.

As Messrs. GRIFFITHS, SMITH, POWELL & SMITH have at all times the names of a large number of intending Purchasers of Schools and School Partnerships on their books, they have every confidence in stating that they can readily effect a sale of any desirable Property they may be instructed to dispose of. All instructions receive the personal attention of one of the Partners of the firm.

No commission charge whatever will be made by Messrs. Griffiths, Smith, Powell & Smith, to Purchasers of Schools, or School Partnerships.

Applications from intending purchasers are solicited for the following properties:—

GIRLS' SCHOOLS.

NORTH WEST COAST. —

BOARDING AND DAY SCHOOL FOR GIRLS. Gross income over £2,000. Net £600. Number of Boarders 30, and 30 Day Pupils. Exceptional opportunity of securing a School in flourishing condition at a nominal price, viz., £600 for Goodwill. School plant at valuation. Splendid premises and grounds. —No. 1,635.

SOMERSET (Seaside).—Large and successful BOARDING AND DAY SCHOOL FOR GIRLS. Gross income £1,233, net £35. Number of Boarders 22, and 55 to 60 Day Pupils. Excellent premises. Rent only £92. Price for Goodwill £450 to £500.—No. 1,632.

SOUTH COAST. — PARTNERSHIP IN FIRST-CLASS SCHOOL. One-third share of profits and valuable furniture, £800. The whole purchase money need not be paid down. Very fine premises.—No. 1,631.

SURREY. — PARTNERSHIP IN BOARDING AND DAY SCHOOL. Gross income £1,200, net £300. Could be largely increased. 80 to 90 pupils. Reasonable offer accepted for half Goodwill and furniture.—No. 1,634.

MIDLANDS. — Good class BOARDING AND DAY SCHOOL FOR GIRLS. Established 16 years. Gross receipts £1,545. Average net profit £250. Number of Boarders 19, number of Day Pupils 38. Rent on lease £135, or freehold could be purchased. Price for goodwill to be arranged. Good reasons for selling.—No. 1,531.

LONDON, N.—Successful BOARDING AND DAY SCHOOL FOR GIRLS, with Kindergarten Department. Gross receipts about £1,000. Number of Boarders 5 and 65 Day Pupils. Price for goodwill only £400.—No. 1,534.

KENT (Seaside). — BOARDING AND DAY SCHOOL FOR GIRLS. Income about £1,000. Number of Boarders 12 and 50 Day Pupils. Price for goodwill and nearly the whole of the furniture and effects, £500; only £500 need be paid down.—No. 1,540.

CONTINENT. — First-Class BOARDING SCHOOL FOR GIRLS in beautiful locality, conducted by an English lady. Exceptionally fine premises with all modern improvements. Income about £3,000. Net income about £750. Number of Boarders 28. Price for goodwill, together with the whole of the valuable household and school furniture, £2,500.—No. 1,538.

LANCASHIRE (Seaside). — BOARDING AND DAY SCHOOL FOR GIRLS. Gross receipts about £1,000. Number of Boarders 18, and 30 Day Pupils. Rent of very fine house only £120; this could be nearly covered by letting the house in the holidays. Price for goodwill, £400.—No. 1,537.

BOYS' SCHOOLS.

WEST OF ENGLAND (Seaside). — PARTNERSHIP IN BOYS' BOARDING AND DAY SCHOOL. Average receipts over £1,600. Number of Boarders 34 and 10 Day Pupils. Very reasonable terms will be accepted, and part of the

purchase money can be paid by instalments.—No. 6,005.

MIDLANDS. — FIRST CLASS PREPARATORY SCHOOL FOR BOYS. Gross receipts about £3,000. Net about £1,000. Exceptionally fine premises. Extensive grounds. Price for the Freehold, £12,000. Goodwill, £2,000. A fairly large sum could be raised on mortgage.—No. 6,038.

CHESHIRE (Seaside). — PARTNERSHIP IN BOYS' BOARDING AND DAY SCHOOL. Gross receipts past year about £890. Number of Boarders 17 and 10 Day Pupils. Price for half share of goodwill, school and household furniture, only £340.—No. 6,002.

NORTH-WEST OF ENGLAND. — PARTNERSHIP IN BOYS' BOARDING AND DAY SCHOOL. Income £1,600 to £1,700. Net about £430. Number of Boarders 21 and 42 Day Pupils. Very fine premises. Price for half-share of profits £300. Very desirable opening.—No. 6,004.

LONDON, N.—Transfer or Partnership. BOYS' PREPARATORY BOARDING AND DAY SCHOOL. Gross income past year £1,170. Number of Boarders 18. Number of Day Pupils 40 to 45. Terms of sale or Partnership—reasonable—to be arranged.—No. 6,041.

KENT (Seaside). — BOARDING AND DAY SCHOOL FOR BOYS. Almost entirely Preparatory. Income about £2,200. Net profit about £500. Number of Boarders 30 and a few Day Pupils. Price for goodwill, £1,000. Furniture optional.—No. 6,039.

Sale or Transfer.

FULLY equipped, successful and high-class KINDERGARTEN FOR SALE, owing to owner leaving district. High, healthy, and rapidly increasing neighbourhood, 18 miles out of London. Very moderate price. Apply by letter to Box No. 99, c.o. Street's, 8 Serle Street, London, W.C.

PRINCIPAL offers small successful SCHOOL FOR SALE. Receipts for each of last two years nearly £600. An advantageous opening for lady of good social position and University standing. Furniture and equipment, quite good and modern, together with goodwill, £250. Address—No. 9,240.*

OCCASIONAL NOTES.

THE Treasury have agreed to the proposals for the formation of a Teachers' Registration Council as put forward in Sir Robert Morant's White Paper, and have undertaken the financial responsibility. The Council is to consist of forty-five members. Eleven members will represent the Universities, eleven will be chosen by different bodies of secondary school teachers, and eleven from the elementary section. Miscellaneous associations of specialist and technological teachers will have eleven representatives; and there will be a chairman. There can hardly be any difference of opinion about the most suitable man to be elected to the office of presiding over the Council. The Right Hon. A. H. Dyke Acland is pre-eminently the man for the post. He has been Minister of Education, and his interest has never flagged. He is at the present moment Chairman of the Consultative Committee of the Board of Education.

WE have no desire to hark back or defend any "harsh criticisms" of the late Permanent Secretary, but when Mr. Somerville once again extols Sir Robert Morant as a great pioneer of progress, and prophesies that his report of 1911 will be described as a landmark in educational history, we are bound to take up the challenge. The sole reason that Mr. Somerville adduced for his edictum was that University representatives were to form one fourth of the Registration Council, and there could be no more trenchant condemnation of White

Paper Cd. 5726 than his own definition of the principles on which such a Council should be constituted. It should, he told the Assistant Masters, be a triumvirate of forces, a co-operation of the State, the Local Education Authorities, and the Teachers themselves. Now, in this Magna Charta of Sir Robert Morant, not only is the Council when formed cut adrift from the State, but even passive benevolence on the part of the Board is refused. We have taken up Mr. Somerville's challenge, and we would ask Mr. Somerville to take up not our challenge, but the more serious indictment of Miss Wallas, whom no one thus far of all Sir Robert's champions has attempted to answer.

IT is strange to find a University Professor decrying theories of education, depreciating lectures and exalting textbooks, and denouncing internal examinations.

On the worthlessness of lectures, Sir Joseph Thomson quoted Dr. Johnson. We remember that Dr. Johnson had even a meaner opinion of educationists than of lecturers. "Education," he said, "is as well known, and has long been as well known, as ever it can be." In spite of these two great authorities, we still hold that a University is a living body, pre-eminently a symposium of masters and disciples, where wit sharpens wit—not as Carlyle held, a well selected library, nor as Sir Joseph would lead us to infer, a corporation of scientific researchers who produce up-to-date textbooks, with independent examiners attached to test the readers. His words will bear this interpretation, but we may be sure that this was not his meaning. He was addressing a body of science teachers whose main work is in the laboratory; yet in science, though perhaps to a less extent than in literature, and at the University, though less than at school, the man is more than the book, the *vox viva* than the *litera scripta*.

IN his address to the Science Masters Sir J. J. Thomson complained that few of his pupils left school capable of translating a page of ordinary German, and similar complaints were heard at other meetings of the various Associations. The defect was generally acknowledged, but, as far as we are aware, no practical remedy was proposed. The distinguished Professor who signs himself "*Sapere aude*" has urged in the *Westminster Gazette* that a good reading knowledge of German should before long be made compulsory at all Universities for all Honour students of any subject. A heroic remedy, but not practical politics. Let us clear the ground by stating the case as it presents itself to us. Two foreign languages are as much as the average pupil can profitably tackle, and there is a virtual consensus that one of these shall be French. If, as the Board of Education has hitherto ruled, the second must be Latin, German will be taught only to boys of marked linguistic ability, and the chances are that such boys will prefer Greek for the third foreign language, attracted by the premium that Oxford and Cambridge attach to classical studies. Let us hope that the Departmental Committee now sitting at Whitehall will induce the Board to reconsider its policy, and, in accordance with the petition of the Modern Language Association, allow French and German to be the normal course of such recognized schools as desire it. Educationally, Germany is Free Trade. Why should England adopt a policy of premiums and preferences?

MR. SELBY-BIGGE is not to be allowed to forget the so-called "Holmes Circular." Almost a year has elapsed since attention was called to the matter in the House of Commons; and the feelings then aroused have continued in a widening circle of protest. The desire of the Board of Education appeared to be that certain classes of appointments should be limited to men who had been educated at either Oxford or Cambridge. Such a claim may well be resented by other Universities. Convocation of London University, at a special meeting called to consider a letter from Sir James Yoxall on the Circular, carried a resolution which, though couched in language calculated to puzzle the young analyst, evidently condemned the policy indicated in the Board's memorandum. It is certainly a matter of regret that a Government Department should imply that there are only two Universities in England where students can receive a sound education.

SIR GEORGE KEKEWICH has more than once, since his resignation, acted as the candid friend of the Board of Education. It is hardly good form to be always criticizing in public the department of which for many years he was permanent head; but in his speech at the Congress of the Educational Institute of Scotland, his criticisms, though apparently intended for the Board of Education, in reality resolved themselves into an attack upon the English rate-payer. In English public elementary schools there is need, he said, for double the number of teachers; but for this lack he did not blame the Local Authorities, who are "between the devil and the deep sea." The Board demanded, he said, educational perfection while the rate-payers clamoured for economy. Sir George would be better occupied if, instead of attacking the Board, he would use his knowledge and influence in endeavouring to convince the rate-payer that educational perfection is costly but is worth the money.

THE Dean of St. Paul's is a born pessimist, and in his sermon to the Incorporated Head Masters he did not flatter his congregation. Most masters, he told them, are the slaves of a bad system, condemned to do what they would not and to leave undone what they would. Hence there arose a sort of cynicism, a staleness born of monotonous routine, a creeping paralysis. Their teaching was as salt that had lost its savour, because the teacher himself was bored by it. The only ray of light in this sombre picture was the acknowledgment that an improvement in the system was gradually taking place, especially in smaller schools, where the curriculum and method were far superior to those of Eton in his day. To urge upon "hereditary bondsmen" the duty of "keeping fresh in body, mind, and soul" may be a counsel of perfection, but to a layman Byron's words ring truer: "Know ye not who would be free, himself must strike the blow."

MOST members of the House of Commons believe that they know all about education. They have heard so much talk on the subject from platform orators and successive Presidents of the Board, that they think there can be nothing more to be known or said. It will come as a

shock to them to read that the Archbishop of Canterbury considers their mental attitude one of "crass ignorance." It is a stinging phrase, and it comes with the force of a man who weighs his words. Certain political or administrative aspects of education may be known to the "man in the street"; but the real meaning of the term, the real work that teachers are trying to do, the real importance of education to the nation—these are by the ordinary member of Parliament overlooked or misunderstood. The education given in the schools must reflect the theory of life held by the governing classes. We wonder how many members have read Mr. Holmes's "What is and what might be," or take in any educational journal.

PHYSICAL exercises now form an integral part of education in almost every school. These are largely based on the systems devised and worked out in Sweden. They differ from other systems of gymnastics mainly in that they aim at the harmonious development of the whole body, and do not merely train the muscles of the arms and legs to perform prodigious feats. With quite young children music is allowed, and with older children in occasional marching exercises. But it is held in general that the accompaniment of music diverts the attention from the performance of the exercise. At the same time the Board of Education are careful to point out that an essential condition of success in the exercises is that the children should enjoy them. In some quarters the fear has been expressed that these Swedish exercises are too intellectual, making little or no appeal to the emotions. Mr. Jaques Dalcroze has introduced a system which aims at a rhythmic expression of the emotions. We are informed that he is coming to London next month with some of his pupils to give demonstrations of his methods in order that English educationists may have an opportunity of judging of their merits.

IN secondary schools it sometimes happens that the teaching of drawing is in the hands of an artist whose avowed purpose is to find out the pupils who have a taste for drawing and to give them a preliminary artistic training. This is not the case in the elementary schools, where the teacher is not an artist giving occasional lessons, but a trained teacher giving instruction in drawing as part of a thought-out curriculum. Some instruction in drawing should be given in the ordinary school course to every pupil. This is the view taken by Prof. Selwyn Image, Slade Professor of Fine Art, who, in addressing a meeting of teachers in London, pointed out that the efforts of the drawing master were not directed towards the ultimate production of artists. The purpose, he said, was to give that particular kind of education which, better than any other, developed observation, facility of hand, and the improvement of taste. There is still need in secondary schools for the preaching of this gospel. To call out and train certain powers is the primary object of the instruction; the production of a pretty picture is of secondary importance.

WE believe that education in Canada is in a very healthy condition, chiefly because it has behind it the belief of the people in its value. Perhaps in our

The University of London and the Holmes Circular.

The Candid Friend.

Dr. Inge on the Badge of Sufferance.

Mr. Jaques Dalcroze.

The Slade Professor on the Teaching of Drawing in Schools.

**Ears
or Finger-tips?**

own country we lack this element of strength. Lord Grey told the North of England Conference that progressive educationists in Canada had arrived at the opinion that English methods of education were out of date. In Canada, he said, they believed that the right way to a boy's brains was not through his ears, but through his finger-tips. Learning by doing, he added, was the Canadian formula. We seem to have heard this formula before, and to have heard it uttered in this (apparently) benighted country. It is in accordance with the belief in this formula that hand-and-eye work have been introduced into schools. Measurements in elementary physics, practical experiments in chemistry, the drawing of illustrations in science, history, and literature notebooks, cardboard and clay-modelling, manual work in the carpentry shop, physical exercises in the gymnasium—all these testify to our belief in the motto, *Learn by doing.*

A SCHOOLMASTER must be a man inspired with the missionary spirit. He must possess an upright character and be able to control and inspire others. He must retain the freshness of youth, both mental and physical. He must pass his days as a marked man, shunned by his fellows, who do not feel quite at ease in his society. He must have studied psychology and understand the laws of hygiene. He must know something of a great many subjects or a great deal of one subject. For five or six hours a day he works at high pressure in a condition of continued strain. Imbued as he is with the missionary spirit, he would no doubt be content with a crust in a garret or a plate of porridge in a wooden hut. But the governing body insist that he shall dress decently; and public opinion, no less than his natural affections, insist that he shall educate his children properly. There are 4,002 assistant masters in grant-aided secondary schools under the control of the Board of Education. These receive an average salary of £168.

MUSIC
in Schools.

THE remarks of a previous Note about drawing may well refer also to the teaching of music in schools. Its importance in the curriculum is not yet fully recognized. This want was the theme of Dr. Arthur Somervell, whose recent address on the place of music in education will arouse many a response. The function of the music master, we take it, is not merely to teach the use of instruments to those pupils who desire this instruction, but to do his utmost to ensure that every pupil shall have an opportunity of learning to enjoy rhythmical sound, and to find perhaps in music an opportunity of expression, and certainly a means of wider culture and appreciation. We do not ask that boys should study the theory of music or that they should learn to be experts on an instrument; we do ask that they should be subjected to the influences of good music and learn by experience both its emotional and intellectual value. In comparatively few schools is music really made an essential part of the life of the pupils. The Puritan tradition dies hard; but it is dying, and music will slowly come to its own again.

ANY theory may be worked to death. However firmly convinced the nation may be that free trade in certain economic directions is necessary, there is a

**Food
and the Brain.**

growing feeling that free trade in the production of backward and deficient children is not for the benefit of the country. One most frequent cause of mental backwardness is want of proper physical nutriment. It is said that parental responsibility must not be weakened. This is a very sound doctrine. But, if parents will not or can not give their children proper food, it is better for the State to provide nourishment than for the children to grow up stunted in body and undeveloped in mind. Some people talk of the provision of free meals at present in existence as if it were a solution of the problem; but, as Sir J. Crichton-Browne pointed out the other day, one meal a day is not sufficient for a starving child. The nation will find it cheaper to feed a child in his own home for fourteen years than to pay for his keep in an asylum for forty or fifty years.

HARD-WORKING teachers do not, as a rule, spend much time over the theories of the psychologists. In school, the practical material—the boy himself—has to be dealt with; and the practical man doing practical work is ever impatient of theories. But no one who reads any papers can have failed to notice the discussions that have taken place lately on the theory that the "faculties" of the mind overflow from one area of experience to another. For years past it has been a safe argument that the value of the study of Latin was to be found partly in the mental gymnastics that it afforded. Train a boy's mind on Latin grammar or on Euclid, and his mental equipment would become flexible and alert in all directions. Learn poetry by heart and a good memory would be secured. These were the traditions. It has long been suspected, and is now openly avowed, that there is no such overflow; therefore the subject taught becomes of primary importance. This may probably lead to a revolution in school time-tables.

LOCAL AUTHORITIES.

THE Shipley Technical School. THE Shipley Technical School had been organized on lines that, as we understand, would commend themselves to Prof. Armstrong. The school was well and fully staffed, with a principal teacher or head of each department. There was no head master. The Committee of the West Riding were not satisfied, and the Board of Education threatened to refuse recognition unless a head master should be appointed. The Shipley Committee demurred on the ground of cost, and sent a deputation to the Board to explain their views. Eventually, however, the Shipley Committee have appointed as head master the Secretary to the Committee. This appointment is, of course, purely administrative, and in no sense educational. It is understood that the Board have accepted the appointment as removing their objection to the recognition of the school. By doing so, it would appear that the Board have in reality accepted a nominal head master, but it is not certain that the controversy is finished.

Continued Education. A LARGE engineering firm in Wakefield, who employ about eighty youths under eighteen years of age, have made arrangements for all of these to attend the evening classes at the Technical and Art School. The firm pay the fees and have appointed an organizer to control the students. On the mornings following an evening class, the students will be allowed to come to work two and a half hours later than their usual time. Promotion is to depend upon satisfactory work at the school.

THE report of the Worcestershire Education Committee is very

A Changed Curriculum.

gloomy as to the good results of the large expenditure of money on elementary education. And in a recent report issued by the Leeds Education Committee it is admitted that there is ground for dissatisfaction with the finished product of the elementary school. "The child," says the report, "should deal with things rather than with words; he should do things rather than hear about them; and he should form ideas rather than have ideas formed for him." The report continues with some excellent suggestions for schemes of study for senior boys and senior girls. For boys and for girls alike there should be effective instruction in the English language; for boys, practical mathematics, drawing, handicraft, and physical exercises. For girls, instruction in the domestic arts, a suitable course of arithmetic, physical exercises, and morris dancing.

Two important recommendations are made by the Education Committee of Warwickshire in reference to the staff teachers in domestic subjects. The possible maximum is to be raised from £100 to £125, and arrangements are to be made by which each teacher shall have a holiday of three continuous months once in three years. "We hope by this," say the Committee, "to avoid the frequent breakdowns in health in the case of these teachers from overstrain, which have caused considerable difficulty for some years past. It should be remembered that, in addition to the teaching being as much as that of a teacher of an elementary school, and frequently more, staff teachers have to do a great deal of travelling at night in the rural parts of the county at the worst time of the year."

Alleged Dearth of Teachers.

"We feel very seriously concerned about the dearth of teachers, due largely, no doubt, to the present salaries not being sufficiently attractive; this dearth is already causing many schools to be understaffed and it threatens, unless speedily corrected, to lead inevitably to a far greater increase of salaries than that which we now propose." The foregoing is an extract from the report of the Warwickshire Education Committee. It appears to be in London that the over-supply of teachers exists. The increase proposed in Warwickshire is, for assistant teachers, who are trained and certificated, as follows:—Men will begin at £85, and rise, by annual increments of £5, to £130; instead of beginning at £95 and rising to £120. For women the new scale is £75, rising, by £4 a year, to £111; instead of £80, rising to £100. First assistants receive two additional increments.

WHILE some Authorities are agitating for an increased grant for elementary education from the Exchequer, the Warwickshire Committee report "as to the urgent need for an increase in the Board's grant to secondary schools." They say that the majority of secondary schools in the county are unable, through want of means, to offer salaries that will attract a sufficient number of suitable masters and mistresses. They point out that, while the Board's grant for elementary education covers from one-half to two-thirds of the cost, in the case of secondary schools in the county the grant does not cover more than one-fifth of the cost; "though the latter are equally important from a national point of view." We suppose the reason is that elementary education is free and compulsory. Secondary schools are maintained in part by endowments and by fees. If secondary schools are made free by Act of Parliament, the nation will have to bear a larger proportion of the cost.

IN the case of pupils in secondary schools working on a special curriculum, the Board of Education require detailed information as to the work done and the books used by each pupil. The head masters and head mistresses of Warwickshire have protested against this imposition of clerical work. The Education Committee "are strongly of opinion that these forms should not be required, inasmuch as they refer to a central authority matters on which they are not competent to judge, and which should be left to the discretion of the head masters and head mistresses." We should not expect the number of pupils working on a special syllabus to be so numerous in any one school as to involve a serious amount of clerical work; and it must be remembered that the information required by the Board is placed at the service of the District Inspector, who is competent to judge of the matter.

THE lack of readily available information about the locality of a

County Readers.

particular school is often a matter of regret. A suitable book, dealing with the history, archaeology, botany, geography, and geology of the neighbourhood would be welcomed in most schools. Sir Isaac Pitman & Sons have offered to produce such a book for Warwickshire, and the Education Committee have accepted the offer. The idea is certainly a valuable one; its success will depend entirely upon its execution. A book written to order is sometimes a dull affair.

THAT the Board of Education are serious in their efforts to lessen the cost of school buildings is evinced by the consent they have given to an experiment proposed in Warwickshire. The proposal is to build a school with 9-inch rough cast walls, instead of 13½-inch solid walls as the existing regulations require. Careful observations are to be recorded as to the temperature. This is to be taken at 9 a.m. and 10.30 a.m. every day; and it will be especially noted if the rooms are sufficiently warm close up to the outside walls. The estimated cost of the building is £10. 12s. 6d. per school place.

THE Ealing Town Council have approved a scheme for establishing a school clinic in their district. Arrangements are to be made for suitable accommodation at the King Edward Memorial Hospital, Ealing. Children from the elementary schools will be treated for defective teeth and eyes, tonsils and adenoids, ringworm and skin diseases. For the working of such a scheme the services of a dentist, an oculist, a surgeon, and an anaesthetist will be required at stated times, and a trained surgical nurse (or nurses) will be appointed to give all her time to the work. The Town Council have approved an estimate of about £25 for the necessary outfit, and of some £350 per annum as the working expenses. When such physical defects as those mentioned above receive due attention through the establishment of such clinics, educational effort will be better directed. The injustice of punishing pupils for inattention due to defective hearing, or some other physical cause, will be minimized, and all this apart from the increase in national health to which medical inspection and treatment must in the long run contribute.

SCIENCE NOTES.

ONE pronouncement of Sir Joseph Thomson in his address to the public-school science masters was highly satisfactory. He said: "I cannot refrain from alluding to the remarkable and very gratifying increase which has taken place during the last few years in mathematical knowledge possessed by the students of science sent up from the schools. This knowledge is growing rapidly from year to year." We are sorry to add that at the end of his address Sir J. J. Thomson had to draw attention to the serious drawback caused by the ignorance of German which is now almost universal among the undergraduates who are taking a science course.

AT the same meeting, Mr. A. Vassall (Harrow) read a bright and forcible paper pointing out that the abandonment of the "faculty psychology" meant more attention to the subject-matter and less to mental gymnastics. The majority of boys in the lower and middle divisions were not proceeding to later scientific study, and the present system did not meet their needs. These boys should work on broad lines—in physics, at such things as the electric installation of a house; in chemistry, at real experiments in burning, decay, and other topics of wide application.

ADMIRERS of the experiments on soap bubbles, which we owe to the genius of Prof. C. V. Boys—i.e. all who have seen them—will be glad to hear that an enlarged edition of "Soap Bubbles: their Colours and the Forces which Mould them" has just been published by the S.P.C.K. The beautiful phenomena exhibited by soap films would doubtless be better known but for the exasperating weakness of the surface which develops when a large audience is present. Demonstrators should bear in mind that even a trace of acid is fatal to soap bubbles.

AT the Science Masters' Exhibition we noticed a little book of

Aids to Botanical Study. botanical photomicrographs which is published by Messrs. Cussons of Manchester. The identification of the various parts in the section is an easy matter with this booklet. The same firm makes a really serviceable hand microtome. The ordinary hand microtome fails just where help is most wanted, but this instrument enables a long slicing cut to be taken. In the same exhibition we saw a simple and very ingenious revolving tray for carrying a microscope. By its use slides can be shown to four or five pupils seated round a small table.

Domus of Silence. WHILE referring to practical aids we think it worth while to point out that it is easy to give apparatus, even if its weight be considerable, a smooth motion of translation or rotation by merely putting the objects to be moved on a board or box, into the lower surface of which "domes of silence" have been hammered.

THE REVOLUTION IN WOMEN'S EDUCATION.

IT is a hackneyed compliment to say of any book that it does not contain a dull page. But of Mr. W. Lyon Blease's "Emancipation of Englishwomen" it can truly be said that the part which deals with the history of women's education, the false theories that so long prevailed, the slow evolution of a more excellent way, possesses nothing short of fascination for the teaching profession. The writer claims that the present revolution in the position of women, one of the most momentous that the world has yet seen, has been a slow, gradual growth of more than two centuries. He asks how it is that from the time of Lucy Hutchinson to that of Elizabeth Fry there is scarcely one woman's name worth mentioning in our history. Women inspired the most delightful love lyrics in our literature during the first half of the seventeenth century; the most insolent and foul lampoons during the second. It is true that the Restoration was a great catastrophe, morally as well as politically; but Mr. Blease is too thoughtful a student of social conditions to attribute profound results to superficial causes. He proceeds suggestively to examine our literature, especially that which deals with the education of women, the motives and conduct of heroines in novels, the gossiping letters of the *Tatler*, *Spectator*, and *Guardian*, Lord Chesterfield to his Son, Burke on the Sublime and Beautiful, the works of Pope, Swift, and others, during the eighteenth and part of the nineteenth century—to discover what lessons were inculcated, directly or indirectly, and so explain the insignificant position of Englishwomen. It is well known that at one period ladies of rank and fashion could hardly read and write. Nor is it without its own significance that even so late as 1865, when the Schools Inquiry Commission began its sittings, it did not propose to inquire into the education obtainable at girls' schools. The fact is not isolated, for the Oxford and Cambridge Local Examinations were originally confined to boys.

Mr. Blease fixes the close of the seventeenth century as the period when the position of Englishwomen was at the very lowest. The three great factors of depression were the Church, the Law, and neglect of education. Even the censors of the day, when advocating a new and more excellent way, deploring the moral slough into which their country had fallen, only thought of rescuing men. In Coke's "Detection of the Court and State of England" he frankly recommends that the "drudgeries of Drawers and Tapsters in Taverns and Ale-houses be performed by women, and that the men may seek better employments; I am sure that they cannot be worse employed." This well deserves to be contrasted with the twentieth-century attitude of temperance reformers towards barmaids.

It is somewhat disconcerting too, especially when one remembers how vigorous is the campaign conducted by

* "Emancipation of Englishwomen." By W. Lyon Blease. (4s net. Constable.)

English missionaries in India against child marriage, to read Mr. Blease's list of wives of well known persons—even of the royal family—married during this period at the age of ten to fourteen years, a practice which entirely eliminated the educative and spiritual side of marriage, and proved a potent depressant of woman's position and influence. The cause produced the effect that all sociologists expect when one half the race is taught that sexual function is alone of importance; and, as might be expected, the victims of a wrong theory and practice of education are blamed instead of the real cause.

Even the great Puritans are examined to see how they will stand the test of equal opportunities of rational education for both sexes. Mr. Blease sees little to admire in Milton's lines:—

For contemplation he and valour formed;
For softness she, and sweet attractive grace;
He for God only, she for God in him,

and several similar passages from "Paradise Lost." It is not improbable that coming generations will condemn this quotation as one of the most extraordinary outbursts of male vanity that our literature has produced.

The men who thought that women had absolutely no life apart from association with themselves—an idea upon which the Reformation laid great stress in several Protestant countries, including England—poured all imaginable contempt on feminine celibacy. Thus, Otway, in his "Soldier of Fortune," assigns to "old maids" the duty of leading apes in hell.

The licentiousness of the Restoration produced a reaction in the minds of sober, respectable men; they desired to shield and protect their womenfolk against even knowledge of the doings of a corrupt society. The more we know of Court and Society life, the more excusable does this fugitive and cloistered virtue appear; yet the woman who is ignorant of life must always remain a fool, in a state of perpetual childhood. For the woman who makes the discovery that she is wedded to a vicious husband, the Marquis of Halifax gives "Advice to a Daughter" (1700), advice which has been much quoted and admired. She is to condone vicious conduct, pretend that it does not exist: "an affected ignorance is a great virtue here." It was about this time that there came into use such expressions as "the soft, fair, gentle sex," "the smiling innocents," "beauteous innocents," "the fairest images of heaven here below"—the whole savouring of mawkishness and maudlin sentimentality. One has but to apply such expressions to a capable business woman or high-school mistress of the twentieth century to measure their absurdity. Many old people will remember how *Punch* still alluded to mid-Victorian women as "the dear creatures." These epithets glide gently into the faulty theory, one that is very far from according with facts, that woman exists to "soothe and soften our cares," as one writer phrased it; she is "the sweetener of our pleasures"; according to another she is to rule in "the mighty Empire of Love." No wonder that Mr. Blease finds the diligent inculcation of these sentiments in girls' minds the rank soil in which women's disabilities flourish; their education is entirely at fault. In his "Letters to his Son," Lord Chesterfield reminds the youth that women are but children of a larger growth (Dryden said men); in society he must conceal the contempt he would naturally feel for "the beauteous innocents," for, after all, they hold men's reputation in their mouths. He must also flatter them, remembering that their sole passions are vanity and love; no adulation will be too gross; they must never be trusted. Pope tells us, "woman and fool are two hard things to hit." He is sure that most women have no character at all; their sole duty is to please.

The *Tatler*, *Spectator*, and *Guardian* have each a good deal to say, and most of it runs on similar lines. One can but wonder how much the flattery had to do with the postponement of reform in women's education. It was bad beyond belief, but they were assured the effects were all and more than could be desired. "Never contradict a lady" is one of the smaller fruits of that upas tree which survived into the nineteenth century.

Our author goes on to examine works by the lesser lights of literature, dealing with the education of girls more directly, and showing how the rills of literature contained the very same elements as the rivers. These include Lord Kames's "Loose Hints on Education," Dr. Gregory's "Legacy to his Daughters," J. Bennett's "Strictures on Female Education," Dr. Erasmus Darwin's "Female Education in Boarding Schools," Hannah More's "Strictures on Female Education," Mrs. Barbauld's "Legacy to Young Ladies," a number of Richardson's Letters, and other works. Though a slight improvement had taken place in girls' education when Hannah More (1789) and Mrs. Barbauld (1826) were writing, it cannot be in any way attributed to their insight or foresight. The great thing for woman was delicacy, propriety—implying not only modesty, but ignorance. "Propriety," says Hannah More, "is to a woman what the great Roman citizen says action is to an orator: it is the first, the second, the third requisite." She here vindicates, at any rate, her own claim to ignorance.

The conversation of the "beauteous innocents" was found to be anything but delectable by the men they met in society; efforts must be made to improve it. Every one knows how the Commission on Secondary Education, sitting from 1865 to 1867, blamed the superficiality of girls' education, mostly composed of pretentious smatterings. But perhaps few realize how industriously the educationists of the day inculcated a smattering as quite enough for the feminine brain. Speaking of astronomy, botany, and chemistry, Mrs. Barbauld observes:

In these you will rather take what belongs to sentiment and to ability than abstract calculations or difficult problems. You must often be content to know a thing is so without understanding the proof. . . . You cannot investigate, you may remember. . . . A woman ought to have that general tincture of them all which marks the cultivated mind. She ought to have enough of them to engage gracefully in general conversation. In no subject is she required to be deep—of none ought she to be ignorant.

Writing of this kind easily leads to the arguments in a circle which we often hear to-day when women's disabilities are discussed. Women are not fit for serious occupations, therefore they are not educated for them; because they are not educated for them, they are not fit for them.

It is extremely interesting to find that twice during the period under consideration proposals were made to found a woman's college, a progenitor of Girton. Mary Astell proposed an Academy for Ladies in 1697. The lewdness and obscenity with which the foremost literary men of the day received this proposal should be read in the *Tatler* (Nos. 32 and 63). In 1775 Mrs. Elizabeth Montague proposed to found and endow a college for the higher education of women, offering the post of superintendent to Mrs. Barbauld. The letter in reply deserves to be carefully studied by those ill informed persons who blame man for refusing to offer woman apples from the tree of knowledge. The quotation is lengthy, but its substance is that precise and accurate knowledge would only form the "Précieuses Ridicules" and "Femmes Savantes" of Molière. Young ladies must have just sufficient of the "tincture of knowledge as to make them agreeable companions to a man of sense." Thus did Mrs. Barbauld consummate the Great Refusal. Mrs. Montague abandoned the project, and seventy years elapsed before it was again revived. In numbers of similar passages Mr. Blease shows us how not only was strength discouraged, but weakness positively encouraged. Lord Kames discourses on how becoming is obedience in that sex "for ever subjected to the authority of a single person or to the opinion of all." Dr. Darwin assures us that "great apparent strength of character, however excellent, is liable to alarm both her own sex and the other sex." He even objects to music, dancing, and private theatricals as calculated to annihilate the retiring modesty and blushing embarrassment of young ladies. Dr. Gregory answers for the mental attitude of his sex towards cultivated women: "If you happen to have any learning, keep it a profound secret, especially from the men, who generally look with a jealous and malignant eye on a woman

of great parts and a cultivated understanding." The famous Dr. Bowdler deploras "timid, gentle, affectionate creatures, disentangling all the mazes of metaphysics, floundering in the Serbonian bog of politics," &c. Sir Joshua Reynolds's sister considers that women can aim at "nothing higher than an exemption from blame." Lady Bradshaigh hates to hear Latin out of a woman's mouth. In his "Essay on the Sublime and Beautiful" Burke descends to nonsense of this kind: "An air of robustness and strength is very prejudicial to beauty," and goes on to praise weakness, delicacy, and timidity as essential to womanly charm.

The athletic young woman of the twentieth-century will be amused to read Dr. Gregory's ideas on good health. Those who enjoy it must do so in grateful silence, never boasting, for "we so naturally associate the idea of female softness and delicacy with a corresponding delicacy of constitution that when a woman speaks of her great strength, her extraordinary appetite, her ability to bear excessive fatigue, we recoil at the description in a way that she is little aware of." The passage seems a useful one for mental healers. When society called for the delicate, fainting female, she filled in the specification; when the fashion changed and women were made to realize that fainting and similar exhibitions of "delicacy" were reprehensible, they abandoned these alluring manners, which in all probability had their vogue only in the upper and idler classes of society.

Mr. Blease reviews and weighs in the balance all these false theories of education, and estimates their effects on the character and capacity of women. Their independence was systematically discouraged; for them there must be no vigour of action or thought, always reliance on others and obedience. Women were thus "incapable of sustained thought, incapable of generalization, deficient in organizing power, irresolute in action, insincere in speculation." Where good sense was not strong, frivolity, jealousy, gossip, hysterics stepped in to occupy a large place in women's lives. And it must be remembered that the pupils of a generation nourished on such precepts became the governesses of the next.

But the gloomy picture of all this irrationality and folly is here and there relieved by gleams of good sense. Sometimes the very author whose absurdity and complete absence of psychological insight have surprised us lapses into sound sense, showing us a glimpse of where woman's dignity and the real welfare of the race lie. And, as nearly always happens in social reform, the few seers published their ideas whilst some of the worst theories on female education were enounced and practised. The course of progress has consisted in the slow growth of the idea that equal opportunities of education should be offered to all and that preconceived notions should be abandoned. The old theory and practice may be said to have released their hold with amazing slowness and to have evinced wonderful tenacity.

Mary Astell's proposal for reformed education has been noted. Harriet Harcourt set up a private institution in Yorkshire in which a few women divided their time between religion and letters. Defoe wrote in disapproval of child marriage and declared that "all the world are mistaken in their practice about women"; yet his own proposals are very moderate. Women are to be better educated in order that they may be fit companions for men. Addison and Steele go further, especially the latter: "The fair sex are as capable as men of the liberal sciences," he writes in the *Guardian*. "The rule for pleasing long is to obtain such qualifications as would make them so, were they not women." Swift and Mary Wollstonecraft were agreed in their teaching, though the decisive dictum was his: "I am ignorant of any one quality that is amiable in a man which is not equally so in a woman; I do not except even modesty and gentleness of nature."

In these few words lies the root of the whole matter. Whatsoever things are lovely and of good report are so for both sexes. The practical application of this theory is the path to pursue. It may well be that a considerable proportion of both sexes will always accept Milton's ideal for women as softness and sweet, attractive grace. Nevertheless, these qualities appeal most convincingly when based on strength

and activity: apart from such foundation they are apt to degenerate easily into debility, feebleness of will, failure to develop usefully and fruitfully.

A remarkable pamphlet was published in 1739: "Woman not Inferior to Man," by Sophia, a Person of Quality. The lady's identity has not been disclosed, but she demands a liberal education for her sex and admission to every employment in the State. So long as the ideal of womanhood was feeble, so long her training would produce weakness. Some improvement in the position of women was doubtless due to the fact that gradually they began to contribute to the literature of their time. Mrs. Carter was recognized as a sound classical scholar. Fanny Burney's novels enjoyed a great reputation, whilst Hannah More, Mrs. Barbauld, Maria Edgeworth, Jane Austen, Joanna Baillie, and Mrs. Macaulay gradually accustomed people's minds to the idea of feminine capacity, affording a useful antidote to Swift's observation that a woman will, generally speaking, be found to possess less of what is called learning than a common schoolboy.

Mary Wollstonecraft's "Vindication of the Rights of Women," often wrongly conjectured to be merely a claim for the parliamentary enfranchisement of her sex, published in 1792, is a work that deserved to produce a much greater effect than was actually the case. It anticipates modern thought on the whole subject of women's position, assails the idea that any virtue can be based on ignorance, and demands a scientific training as equally necessary for women as for men. The great source of female folly and vice is narrowness of mind. A woman is a human being first, a woman afterwards. Her individuality must find sufficient expression; so long as men direct women's lives, just so long will sex be developed at the expense of all other faculties. The writer believes thoroughly in mixed education as the remedy for our present hypertrophy of sex.

But her book fell among thorns, being banned by nine-tenths of the women who could have comprehended it. Two generations of Englishwomen had yet to be nourished on Dr. Gregory's theory of "delicacy" before the time for preaching a better gospel arrived. Moreover, the book, partially inspired by the French Revolution and the great part women were playing in that movement, suffered in the reaction that ensued when the powers that were in possession demanded a little more sleep and a little more slumber. Mr. Blease claims that the movement for reform in women's education has never looked back, though the rate of progress has varied. Since the publication of Mill's "Subjection of Women" in 1869. Perhaps the volume under review is not often more suggestive than when our author examines the heroines of Scott, Fielding, and Richardson. Why should Sophia, Amelia, and Pamela so gratefully accept the attentions and matrimonial proposals of men who passed their lives largely in debauchery? Mr. Blease stigmatizes one of these as a seducer and the other as a paltry scoundrel. Of course, the answer to the conundrum is that these poor ladies could find nothing better to do.

Pessimists should certainly read this book, for it ensures a lasting glow of optimism. The way has been long, but it is a crescendo movement for equality of opportunity, for room to develop. Olive Schreiner, who possesses the Englishman's faculty for inductive reasoning, is correct when she concludes that the modern woman movement is of the woman towards the man, her acceptance of one standard of ethics and mentality, of his standard, and that its final result will be closer union between the sexes. The struggle is not between the sexes at all, but between the men and women who have consciously, and the far greater number of men and women who have unconsciously grasped this truth on one side, and those who have failed to do so.

Mr. Blease's deeply interesting book suffers somewhat from lack of arrangement, and he offers students and readers probably the only people who require and use an index a very incomplete one, the mere name of the thing. On the other hand, the bibliography of his subject is most complete.

C. S. B.

WORK ON THE LAND IN A SECONDARY SCHOOL.

THERE is something in the touch of Mother Earth that makes for joy and health. A child, no less than a horse, has an instinctive desire for joyous and rapid movement so soon as the feet leave the macadam and touch the springy turf. Nature has its power to stir the emotions and stimulate the intellect. In education, so far as young children are concerned, we recognize this power by insisting that children shall have what are called Nature-study lessons, and by providing, when circumstances permit, plots of ground as school gardens. In large towns, it is true, the Nature-study lessons are sometimes of necessity arid and second-hand; but in rural districts, where the lesson in the classroom is enforced by the actual experience of the child outside the school, it is otherwise. A sound educational principle says that lessons should be connected with the environment of the child and based upon what is within his experience. In the country the children see the fields, the trees, and the flowers; they listen to the birds singing and watch the butterflies on the wing. They are interested in the phenomena and processes they see around them; and these form a good starting-point for widening their knowledge and experience and for sharpening their powers of observation.

Much has been heard in recent times about experiments in education and about curricula with a particular bias. Schools are organized with a constructional, commercial, or vocational bias. Certain phrases become popular and are worked to death; but, nevertheless, in all grades of schools the main bias in education is literary or bookish. This is to some extent inevitable. Children cannot learn to read and write by observing Nature; and these two arts—reading and writing—are subjects of primary utility that every school is called upon to teach. With improvements in method, however, the time spent on these necessary utilitarian subjects is diminished, and leisure is left for other matters. In many primary schools efforts have been made, not without a considerable measure of success, to give a rural bias to the scheme of education. There are Nature-study lessons, observational walks and the like, as well as garden plots attached to schools and worked by the boys. In girls' schools a corresponding movement has brought about the introduction of housecraft, taught in cookery-room or laundry. Further advances in these directions are only limited by the hesitation of the authorities to incur the greater expense that is involved as soon as the "book-lesson" is exchanged for any form of "practical" work. Sixty children can sit at their desks for a reading lesson, but "practical" work means smaller classes and the provision of workshops, laboratories, and apparatus. Still, undoubted progress has been made, especially in rural districts, towards connecting the education given in the elementary schools with the land and the rural industries.

In secondary schools, except in kindergartens and in lower forms, little is done in this direction. A few schools may be said to specialize in agriculture, but for the most part the gap between the Nature Study and gardening of the primary schools, and the Agricultural Departments of the University Colleges, is unbridged. In the main, the curriculum of the secondary school is based upon linguistic and literary study. This is true in spite of workshops and laboratories. For the science work is often of an academic character and unconnected with the industries or life of the locality. Yet many sound arguments can be found for the introduction into boys' secondary schools, situated in the country, of a course of study based upon the agricultural environment of the majority of the pupils. Pedagogics, no less than common sense, warn us to advance from the known to the unknown, and to make the experience of the pupil the foundation upon which to build. Several valuable experiments in various directions have been made, with the encouragement of the Central Welsh Board, in the Intermediate or County Schools of Wales. The proposal to make the agricultural environment of the boys the basis of an all-round secondary edu-

cation has been tried in the County School at Welshpool. The school is in a specially favoured position for the experiment. The governing body have spared no pains; and they have made liberal provision of laboratories, specialist masters, and use of land. The scheme has received encouragement from the University College of Aberystwyth, from the County Education Committee of Montgomeryshire, and from the Central Welsh Board. Further, the Earl of Powis allows the use of the home farm near Welshpool, which is said to be one of the finest in the county. Welshpool is, of course, in the midst of a purely agricultural district. Thus the school starts with distinct advantages.

The scheme for giving an agricultural bias to the curriculum of the County School for Boys at Welshpool was begun tentatively in 1908. It is now fully organized, and the head master has sent us a copy of a report on the subject that he has presented to his Governors. It is not to be supposed that Welshpool is to be turned into a school of agriculture. The claim of the scheme to consideration is based partly on the principle that education should be connected with the environment of the pupils, and partly upon the assertion that the agricultural bias does not upset the balance of a well planned secondary curriculum. It is by the latter point that the scheme must stand or fall. We are not concerned here with a school deliberately giving a technical education suitable for boys who intend to become farmers, but with a school that claims to give an all-round secondary education. The claim seems, so far as can be judged from the written report, to be substantiated. The syllabus is full of human interest. The subjects included are: chemistry, physics, biology, arithmetic, geography, woodwork, drawing, and English literature and composition. We gather from the report that no foreign language is taught. If the mother tongue is properly treated this need not imply loss to the boys. No mention is made of history. Apart from this somewhat serious omission, the scheme appears to be sound and to possess just the qualities that will develop the intelligence and powers of the boys. It would not be applicable to all schools. But in country secondary schools where most of the boys live upon the land—and many will return to work upon the land—it is most important that boys should have an opportunity of applying their intellect to agricultural problems, and should learn that science and skill are wanted on a farm as elsewhere, and that to work upon the land is not of necessity to become an illiterate boor.

"It is most unfortunate," said a distinguished Inspector reporting recently to a Welsh County, "it is most unfortunate for agriculture, which is, after all, the principal industry of North Wales, that the idea should still be cherished, and occasionally openly avowed, that education—in other words, developed brain power—is of no assistance in farming, as though it were a matter of inherited instinct, like nest-building of birds, and not of human reasoning at all. While such notions prevail, our soil must yield much less than it might, and our money go to foreign producers, who have learnt that successful farming is a matter of scientific organization." But the Welshpool scheme is of wider application; it claims to give a sound general secondary education and to be based upon recognized pedagogic principle.

KINGSLEY hymned "the black North-Easter" and Tennyson preferred the mists of free England to the palms and temples of the South, but Dr. Parkin has gone one better. In his address to the Geographical Society he reckoned a thermometer which sometimes marked thirty-five degrees below zero one of the greatest assets of Canada, and justified the bold paradox by explaining that these snaps of Arctic frost ruled out the black population altogether, were an effective barrier to the influx of Southern Europeans, and favoured the hardy Norseman. The raw and rough climate of England was the best nursery for the Canadian immigrant, and Canada would become the home of men with strengthened backbones who could take with a frolic welcome the extremes of heat and cold.

SOLOMON RABSHAKEH.

["Solomon," our head "table-boy," has been dismissed for insolence.—*The Chefooan*, January 1912 (magazine of the School for Children of Europeans, Chefoo, North China).]

AS we school folk look back over our own school days, we must find something chastening—to some, perhaps, consoling—in the realization that the figures and events which stand out most clearly in our memory are often quite unconnected with the scholastic side of our life. Teachers and lessons came and went, were borne with, appraised and forgotten; but here and there some trifling incident—a quarrel, a day's boating, a book read out of school hours, an evening's chatter—take on in retrospect a curious significance, become, as it were, symbolical. One such vividly remembered day in my own childhood introduced us to the heroic figure whose name stands at the head of this article. It was a burning day early in July. Sixty of us—British, American, and a few German girls whose parents had settled in various parts of China and Japan, with a dozen or so mistresses to match—were half way through tiffin. I can picture the scene now. The long, low dining-room (the school was then a big white-washed bungalow) with a table running length-wise, crossed at one end by a smaller table where, Saturday by Saturday, my particular cronies and I plotted wild schemes of defiance over the never-to-be-sufficiently-detested weekly (winter) "Brother-where-art-thou" or (summer) "Pears-and-glue."^{*} The wire-netted south windows looked out across a deep veranda—darkened now by close bamboo blinds—and a strip of sun-baked garden, to the stone wall that bordered the dusty high road leading from the Chinese town some two miles away to the great cities of the north.

The jingling of innumerable mule bells, the shrill cries of the drivers, the intolerable creaking of strings of heavy barrows, and, dominating all, the piercing buzz of the "scissors-grinders" perched in a tall tree near the music-rooms, filled the sultry air. In the dimmed light the double row of faces looked white and weary. Mistresses spoke in nervously irritated voices, children made sullen replies. The punkahs swayed lazily to and fro; no doubt the coolie was dozing again on his stool in the north veranda. I craned my neck to see and caught the distant glitter of sunshine on the bay. Only half-past twelve now, and they'd never let us start for bathing before six. I thought of the long, hot afternoon—the siesta under stifling mosquito curtains, the hour or so of languid preparation—that lay between us and the golden moment when we might plunge into the great cool sea. O how hot and cross and stupid every one looked, and how dull the heat made these summer days! One was almost moved to regret the bitter winter months when the sea-foam froze as it touched the shore and the storms came sweeping down from the North, seeming delightful now by contrast with this fierce wind laden with sand from the plain of Chili. If only something—anything—would happen, one might perhaps forget the heat.

A stir by the service hatch brought the longed-for diversion. "David," head table-boy of the period, had just entered, followed by a short, thick-set, stolid-faced, beady-eyed youth of about nineteen. A new "boy"—there would be a race to find a nickname for him. It was against rules for girls to hold communication with any of the large—unnecessarily so, to English eyes—band of servants; and, indeed, the gardeners, boatmen, and outdoor coolies generally interested us very little, while the cooks and their satellites we did not know even by sight. It was different with the amahs and sewing-amahs (the only women among the servants), who tottered about on their tiny, bound feet at various light household tasks, or sat, stitching industriously, cross-legged on the broad *k'angs* (brick beds) in their part of the servants' quarters. They were our friends, for not only were they always ready to repair damages or come to the rescue generally, but

* School names for currant roly-poly and fruit jelly.

most of them made a small profit by rearing silkworms in big bamboo trays, and, in return for judicious offerings of mulberry leaves for the greedy creatures, might be coaxed into buying us fascinating native sweets—peanut candy, sugared crab-apples threaded (stickily alluring) on little sticks, aniseed balls, and a delightful compound of puffed rice and Japanese honey. But such intercourse was naturally (such is the regrettable wrong-headedness of authorities) restricted, and the servants who came chiefly under our—generally disdainful—notice were the half-dozen or so “boys,” those equivalents of English house- and parlour-maids; for these, though nominally engaged to carry out orders without question, had it in their power, as we were soon to discover, to affect our comfort very considerably in a variety of small ways.

But one point of interest every servant, outdoor and in, had for us. It was impossible for even those of us who knew the language well to master the native names of the constantly coming household staff; so we amused ourselves by giving everyone on his arrival a name of our own choosing. Biblical names were popular; they seemed appropriate, and, moreover, the Sixth were perennially and reluctantly deep in the study of Kings I and II, and used as aids to memory the whole troop of servants, from the chief sewing-amah, *alias* Jehoadan of Jerusalem, to Shalmaneser Assez, humble custodian of Edam, the wicked little school donkey, whose chief duties were to carry water from the “compound” well at the bottom of the hill or to roll the mud tennis-courts, but who found the harrying of Shalmaneser an occupation more fascinating than either.

So we now looked critically at the new-comer listening in obvious bewilderment to the whispered instructions of “David.” We watched his clumsy movements, noted his air of impenetrable stupidity, and decided that his sojourn among us would be brief indeed.

“Say, but he’s real smart,” drawled my neighbour, an American from Nagasaki. “I reckon what he don’t know about the particular dooties of a waiter ain’t worth making a fuss about. Guess he’s staked a claim to be called ‘Solomon.’”

“Oh, isn’t he an idiot!” agreed a jolly Scotch girl, lately arrived from Canton, watching the new recruit as he trotted awkwardly after his superior with a pile of dishes. “There! I knew he’d drop them. I vote we call him ‘Rabshakeh’; because,” she explained in answer to inquiries, “because he shakes so much.”

A shout of derision greeted this daring flight of humour; but every one else being too hot or too indifferent to suggest an improvement, “Solomon Rabshakeh” the new table-boy became.

Thus lightheartedly, unwitting of the future, did we welcome the seemingly dull, ignorant youth who was destined to become a dominant factor in our lives. “David,” convicted of misappropriation of supplies, departed, and “Solomon,” ~~solomon~~ or other—no one was quite clear about the matter—the defiance of all rules of precedence, reigned (there is no other word) in his stead. For, once familiarized with foreign surroundings, “Solomon” began to display the qualities that have ever distinguished your born leader of men. A mere servient table-boy he! Perish the ignoble thought! To be ruler over a poor hundred souls—most of them despised and ignorant foreigners, and mere women-folk at that—might be the glorious destiny befitting his high talents, but at last he would play the part magnificently for what it was worth.

So though there lingered long in the minds of many a belief that Miss So-and-So was Principal, or Miss Someone-Else was housekeeper or matron, we girls were not deceived. ~~She~~ ~~well~~ ~~was~~ ~~law~~, whose wishes paramount? Whose but ~~solomon’s~~? Did we plan a picnic—“Can Solomon come?”—but cared he whether we went provision-less!—“Will Solomon walk so far? Will he let us come back by moonlight or will he drive us home in time for his evening ‘chow’?” Was Prize-Giving fixed for a Friday and orders given accordingly?—Solomon would produce a hundred irrefutable arguments against any day of the week but that

chosen arbitrarily by himself; and such is the force of personality that the whole household was soon living, meekly and uncomfortably, under the shadow of his tyrannic rule. Who was it pealed the rising bell with such vindictive fervour, rousing us from our snug beds in the cold of a “north-blow” morning? Who forbade a compassionate amah to smuggle in hot water for our morning tub—quoting rules, if you please! Who swept away our plates unheeding, or scowled at our timid requests for more? Who, long before he picked up enough English to understand our conversation at table, proved himself able to divine our secret thoughts, and saw to it that the dishes we most disliked figured with exasperating regularity on our simple menu? Who watered down the treacle and weakened the tea? Who scraped the butter and docked the jam, spreading the bread with a single movement of the knife so thickly that our greedy little mouths watered as we watched him wistfully through the buttery hatch, and with another swept it all off again so skilfully that we were compelled to resentful admiration? Who told when we toasted lunch cake at classroom stoves, meanly producing burnt penholders as evidence? Who grumbled when we dared to make toffee on Saturday afternoons—official permission meant nothing to him—and declined to remove our dishes and pans? Who kept us waiting in the dark till he chose to bring the lamps, staring in coldly pitying scorn at the unfortunate told off to translate the message—few of the mistresses could speak Chinese—reducing the most fluent to stumbling incoherence? Who hid the poker and banished the blower? Who always forgot the coals? Who bullied the coolies and harassed the amahs, making wretched the soul of the mistress in charge? Who fought us victoriously all the day long, disdaining our preferences, ignoring our plans? Solomon, and again Solomon!

O blue-gowned, black-hatted, red-buttoned symbol of a fate inexorable as dark, have the multitude of thy arrogancies at last their due reward? Hast thou indeed ceased from troubling? It cannot be. That plump, familiar figure, that smug smile, that strut—self-satisfied, imperious—gone! Sooner may we picture the stately, mandarin-ridden China of our hearts an up-to-date republic à l’*Américaine*. Say, mark well my prophecy. If, in a desperate frenzy of revolt, his subjects have indeed cast off his yoke, their madness will be but for a season. Calm, inscrutable and haughty, careless alike of command, entreaties, maledictions, threats, Solomon Rabshakeh, *tyrannus tyrannorum, will return!*

ELIZABETH RENDALL.

SECONDARY TEACHERS PROVIDENT SOCIETY.

AN important Conference was held at the Offices of the Assistant Masters’ Association, on January 24, at which representatives from the Teachers’ Guild, the Assistant Masters’ Association, and the Assistant Mistresses’ Association were present. The object of the Conference was to arrange for joint action in connexion with the insurance of teachers, and the following resolutions were passed:

(1) “That this Conference approves of the formation of a Secondary Teachers’ Provident Society, containing an internal and an external section for each sex; the internal section for insurance under the Insurance Act, 1911, the external section for other insurance.”

(2) “That the following questions be referred to sub-committees of each sex, (i) the nature of the benefits, (ii) the terms of admission into the Society.”

The above resolutions were reported to the Executive Committee of the Teachers’ Guild on the following day, and the meeting unanimously resolved “That the Executive Committee of the Teachers’ Guild is prepared to co-operate in the formation of the proposed Secondary Teachers’ Provident Society, on the understanding that before registration the scheme will be submitted for the sanction of its Council.”

It was reported to the Conference that the Association of Teachers in Technical Institutions had intimated its willingness to co-operate.

JOTTINGS.

Mr. A. J. SWINBURNE'S "Memories of a School Inspector" (McDougall's Educational Co., 2s. 6d. net) might well have been named "Nuts and Chestnuts." We cull a few. A lady in Devonshire, whose aunt died in Paris, obtained from the French Government a promise that the body should be transmitted to her. The coffin duly arrived, but on opening it for a last look she found to her horror a General in full uniform. In reply to an indignant wire she received the answer: "Aunt buried to-day with full military honours; pray keep General."

ON a visit to a Suffolk school Mr. Swinburne paused at the open door, impressed at the sight of three hundred children all on their knees in rapt devotion as they repeated after their mistress the Lord's Prayer. The illusion was dispelled when after "Forgive us our trespasses," he heard in a very different key: "Nicodemus Obadiah Bugg, you've got one eye half open. I'll whack you after school."

A MEMBER of a small Suffolk Board soliciting Mr. Swinburne's help in the choice of a mistress added, "But she must be over forty, sir, as the chairman is—well, yer see, sir—he's a bit amorous like."

A SUNDAY-SCHOOL teacher asks: "King Pharaoh's daughter found the little baby Moses in the bulrushes, didn't she?" Answer: "She said so, Miss." Same teacher (to avoid the hard word "succeeded") asked: "Who came after Solomon?" and was answered in a voice which evidently reproached the teacher for touching on so delicate a subject: "The Queen of Sheba, Miss." A pupil-teacher writes: "Any one who is afraid of having a thick waist, let her think of the Venus de Medici, the God of Beauty, whose height was 5 ft. 2 in. and who possessed a waist of 27 in. Tight lacing is horrible, leaving no room for the expansion of the feelings." "Greenwich—an observatory for invalid seamen," is a delightful portmanteau answer.

THE worst handwriting we have ever known was that of a late Chief Inspector, and for bad spelling Mr. Swinburne runs him hard. "Cannon Rawnsley, *impell*, the girl who *lead* the chorus, *syren*" are some of his howlers, and we suspect, as the epitaph is quoted from memory, "the *bighting* of the tongue." We will not quote the French and German howlers, as he disclaims any knowledge of modern languages, but in philology he gives himself away by quoting as the climax of a certain Bishop's ignorance the derivation *educare*, "to build up."

WE hope that it is not too late to call attention to the Empire Calendar that Mr. G. H. Hallam, sometime a Harrow Master, has compiled for the Victoria League. Each month records from a dozen to a score of great events, with notes that are a model of condensation. It is singularly free from party bias, and Gladstone is honoured no less than Disraeli. We wish that every form master and mistress in the kingdom would exact month by month a knowledge of the Calendar. Copies can be procured from the office of the Victoria League, 2 Millbank House, Westminster, price 2d., or fifty copies for 6s.

MR. RUNCIMAN has himself confirmed the estimate that "An Old Fogey" formed last month of his administration at the Board of Education. Speaking at Newcastle on January 18, he compared himself to the conductor of an orchestra in which every performer played a solo on his own instrument. Mr. Runciman would have been better advised to bury the hatchet. An admiral whose ship has mutinied is not given a regiment, and the head master who cannot keep discipline thinks himself lucky to be pensioned off with a canonry. If his bandsmen were not muzzled, we think that the reply to their late bandmaster would be in unison.

SINCE the above was in print we have seen a letter from Mr. Runciman's secretary, correcting the report of the Newcastle speech. According to the amended version, the remarks we have quoted referred not to the staff of the Board, but to the religious dissensions that prevail in the outside world of education. We accept, of course, the correction, but must add that Mr. Runciman

is singularly unfortunate in so often laying himself open to misinterpretation.

THE first International Eugenics Conference is to be held at the University of London in the week from July 24 to 30. The President is Major Leonard Darwin, and papers have already been promised by Vice-Chancellor Sadler, Dr. F. S. Schiller, and leading educationists from America, Germany, and France. Applications for program and conditions of membership should be addressed to the Hon. Secretary, Eugenics Education Society, 6 York Buildings, Adelphi, W.C.

DR. ROUSE, in the *Morning Post* (December 29, 1911), maintained the infinite superiority of ancient to modern languages in respect of clearness of meaning. A Latin sentence can bear only one interpretation. English—especially newspaper English—is full of obscurities and ambiguities, and to prove his point he quoted a newspaper headline: "Heavy Sentence for Blackmailing M.P." "A Schoolmaster" (January 12) takes up the challenge, and Dr. Rouse has not so far replied. We will not join the fray, but, as a practical test, would ask Dr. Rouse whether he considers Virgil more easy to interpret than Tennyson, and if he thinks that the scribe who copied Tacitus' "Annals" would have said, like the "reader" of Macaulay's "History," that he had never had occasion to read a sentence twice. William Johnson, a classicist of the classicists, does not thus seek to exalt the ancients by vilipending the moderns:—

"Two minds shall flow together, the English and the Greek."

TUDOR HALL was opened on January 3 as an Institute of the Voice-Training Society at Bristol. The Bishop of Bristol, who presided, said he believed that Bishops would before long require of candidates for Orders some certificate of a knowledge of voice production. Miss D'Orsey, who is Head of the Institution, announced that arrangements had been made for resident pupils as well as for classes, and that they were prepared to instruct all comers from the age of three to eighty.

A ONCE conspicuous figure in the educational world—Froebel's distinguished pupil, Fraulein Eleonore Heerwart—has now joined the great majority. Grateful appreciation of her work in this country, as head, from 1874 to 1883, of the Kindergarten Department of Stockwell Training College, was expressed in a resolution adopted by the Council of the British and Foreign School Society, who form the governing body of the College.

THE closing of the Highbury High School (Girls' Public Day School Trust) is a source of great regret to present pupils and their parents, as well as to a large and devoted body of "Old Girls." The school was opened in March, 1878, with Miss White, principal of a school in the neighbourhood, as Head Mistress, and on her transference to the Head Mistress-ship of the Sutton High School, the post was ably filled by Miss Minasi.

THE schoolma'am is honoured in South Africa. The Principal's return from a holiday is thus recorded in the local press:—"At the gate Miss Burgess was presented with a lovely bouquet by Miss Nellie Pautsma, of Form VI, while as she walked towards the door the girls gave vent to their enthusiasm by singing 'For she's a jolly good fellow!' Tea was afterwards partaken of, and a pleasant *tête-à-tête* followed." ("*Tête-à-tête*" is South-African for a *soirée*.)

MR. HARDRESS O'GRADY, Lecturer in French at the Goldsmiths' College, is giving, on behalf of the Modern Language Association, a course of Conférences on French Poetry, at University College, Gower Street, on February 20 and the four following Tuesdays. The Conférences will consist mainly of recitations, and will include, besides well known poets—Delavigne, Musset, Baudelaire, Verlaine—less familiar modernists, Malharmé, Villiers de l'Isle Adam, Paul Fort, Verhaeren. Mr. O'Grady has resided many years in France, and has made a special study not only of French literature but of elocution.

THE ordinance printed by the University of Edinburgh for the institution of degrees in veterinary science has been passed by the Privy Council, and will come into force after the Summer Term.

The Educational Times

AND

JOURNAL OF THE COLLEGE OF PRECEPTORS.

Published Monthly, price 6d.; by post, 7d.

The *Educational Times*, now in its sixty-fourth year of Publication, is the organ of the College of Preceptors. It contains all information concerning the proceedings of that body, with the Class Lists of its Examinations and is sent regularly to all its members.

It contains also papers on Educational Subjects generally, Monthly Summaries of Educational News and University and College Intelligence, a large number of Reviews, and a Mathematical Department which for many years has had a high reputation both in England and abroad.

OFFICE: 89 Farringdon Street, London, E.C.

THE LONDON Central Institute for Swedish Gymnastics, 16, 17, & 18 Paddington Street, Marylebone, W.

Telephone: 872 Mayfair.

The School World says: "This college for men students . . . will provide a first year's course fitting students for posts in elementary schools, and a second year's course enabling the graduate to take charge of any school of whatever standing. Anatomy, physiology, theory of movements, hygiene, and kindred subjects necessary for a complete grasp of physical training will be taught by experienced teachers. This will be a noteworthy addition to the facilities for training in this subject. . . . this new college has been most cordially welcomed by the Parliamentary Secretary representing the Board. . . . As a sign of progress, and in the hope of a better future for the physique of the youth of the nation, the new 'Central Institute' will be cordially welcomed."

PUPILS ARE NOW RECEIVED.

The Institute also undertakes the instruction in Physical Exercises on the Swedish System for Schools in the neighbourhood.

Recreative Classes—Gymnastics and Fencing—are held in the afternoons and evenings.

For particulars apply to the Principal—

ALLAN BROMAN,

From the Royal Central Institute of Gymnastics, Stockholm.

The Royal (Dick) Veterinary College has decided to erect new and enlarged buildings.

THE Association for the Teachers' Study of the Bible has arranged a course of lectures to be given by Prof. Kennett on "The Building-up of the Bible from the time of the Prophet Amos," at King's College, Strand, on February 14 and the four following Wednesdays, at 6 p.m.

PITY the sorrows of "A Student" in an L.C.C. Day Training College as set forth in the *Schoolmaster*. He gives us the details of his budget, amounting to £31. 11s. 6d. a year for "actual necessities." Under this are reckoned travelling expenses for sports, ("for what is college life without sports?"), and "dances, dinners, and other functions of school life"; these of course have to be entirely tabooed, "but are set down at £1 a term. The amount he received from the Board of Education and the L.C.C. is £30. "This means that one cannot buy such things as tobacco, an occasional theatre, presents, and something for the old folk at home now and then." To crown his cup of sorrows he has to work longer hours than the Board of Education staff and is not paid overtime for his work at home of an evening. Gray will supply "A Student's" epitaph: "Large was his bounty and his soul sincere," but "Chill Penury suppressed his noble rage" and left it to the *Schoolmaster* to strew "a holy text."

THE Class lists of the Cambridge Local Examinations held in December last have been issued, showing that the total number of candidates entered was 9,557, exclusive of 3,870 candidates who were examined at Colonial Centres. In the Senior Examination 876 boys and 917 girls satisfied the examiners, 75 boys and 10 girls being placed in the First Class; 439 boys and 169 girls showed sufficient merit to entitle them to exemption from one or both parts of the Previous Examination. Of the Junior candidates 1,685 boys and 1,038 girls passed, the numbers of those placed in the First Class being 117 and 12 respectively. In the Preliminary Examination 1,306 boys and 815 girls passed.

LAST in the fray of "Classics and the Average Boy" comes Emeritus Prof. Ramsay, who gives (*Times*, January 27) his experience of forty years as a teacher of Latin in the University of Glasgow. The Scottish average boy, he tells us, applied himself with vigour to the study, and it was from a basis of Latin grammar and Latin syntax that many a humble scholar has risen to positions of honour and prosperity, not only in the learned professions, but also in various walks of life. He has found, moreover, that ability to write correct Latin prose, quite apart from style, marks a distinct stage in a youth's intellectual development. We do not dispute Prof. Ramsay's facts, but his inferences. A boy who at school excelled in double acrostics would be likely to distinguish himself in after-life, and does not ability to write correct French or German prose equally mark "a distinct stage"?

THE SUPPLY OF TEACHERS.—Whether the training colleges are turning out more teachers than are required by the elementary schools has ever been a burning question. Hitherto every training college has thrown its annual batch of new teachers upon the market at the same time of the year, and when the schools have reopened after the summer holidays the number of vacant places for assistant teachers has been insufficient to absorb all the qualified candidates. The complaint of the unemployed teacher has been loud and bitter, and the inference has been drawn by a large section of the public that too many teachers are being trained. The London County Council, however, apparently takes the view that the fault is not in training too many teachers, but in placing the whole year's supply upon the market at the same time. The Council have recently adopted what amounts to a mild revolution in the educational world. They have decided to admit students to two of their training colleges at Easter as well as in the autumn. The experiment will be initiated at the Fulham Training College, where from twenty to thirty students will begin their two years' course of training after the next Easter holidays. These students will leave college at Easter 1914, and will be ready to commence work immediately after the Easter holidays. By that time teachers turned out in the autumn of 1913 should nearly all have been placed so that the small Easter batch should have little or no difficulty in procuring posts. The experiment will be extended at Easter 1913 to the Moorfields Training College, and in that year it is anticipated that from a hundred to a hundred and twenty Easter students will be admitted to the two Colleges.

IMPORTANT NOTICE

Mr. Wm. HEINEMANN wishes to draw the attention of Head and Assistant Masters to the *New Series of School Readers* which (together with other new educational books) he is about to issue. The series will be entitled

HEINEMANN'S HERO READERS

and will deal with the lives and achievements of the great heroes of all ages. They will be written with a view to kindle in youthful minds the desires to excel and lead, manliness and fortitude.

The first volume *SHACKLETON IN THE ANTARCTIC* is now ready. It tells in simple language the thrilling story of Sir Ernest Shackleton's splendid effort to reach the South Pole; the hardships he had to face, the tremendous energy with which they were overcome, and how Queen Alexandra's Union Jack was planted within 120 miles of the Pole. It is a book to make youths glow with enthusiasm. It is certainly the *ideal* School Reader.

HEINEMANN'S HERO READERS

Illustrated. Crown 8vo. 1s. 6d. each.

Now Ready, Vol. I.

SHACKLETON IN THE ANTARCTIC

By Sir E. SHACKLETON, C.V.O.

255 pages. 47 chapters. 50 full-page photographs. Clearly printed on good paper. Strongly bound. Crown 8vo, 1s. 6d.

WM. HEINEMANN, 21 Bedford Street, London, W.C.

Your School Tea

Write for free samples of the four specially imported inexpensive School Teas, used by so many Schools and Colleges, at home and abroad.

SECOND EDITION. Crown 8vo, cloth. Price One Shilling.

FRENCH WORDS AND PHRASES.

By J. G. ANDERSON and F. STORR.

"The words and phrases in this book are well chosen, and such as ought to be got by heart and kept in the memory of French pupils. They are classified under distinct heads and are mainly in common cases, and may be learnt in sections as required. The fashion is old, but Mr. Storr knows the value of a good working vocabulary, and gives good reasons for the adoption of its form, as well as excellent advice as to its use."—*The Educational News*.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

BLACK'S SCHOOL TEXT-BOOKS.

FRENCH.

LA PREMIÈRE ANNÉE DE FRANÇAIS

A DAY IN PARIS.

Written and Edited by F. B. KIRKMAN, B.A. Oxon.

Fourth Edition, completely Revised. Illustrated.

Small crown 8vo. Price 2/- Bound in Cloth.

In this edition important changes, suggested by several who have used the book during the last five years, have been made.

LA DEUXIÈME ANNÉE DE FRANÇAIS

Text and Exercises, providing a complete

Course of Instruction for One Year.

Written and Edited by F. B. KIRKMAN, B.A. Oxon.

With the assistance of CH. M. GARNIER and W. H. B. LEECH, M.A.

Small crown 8vo. Price 2/6 Illustrated. Bound in Cloth.

With or without Vocabulary.

This book is a sequel to the "Première Année," the vocabulary of which deals chiefly with the home, the street, and the school. This takes the learner to the country and seaside in the form of a tour through Brittany and Normandy. An elementary historical, geographical, and literary vocabulary is provided by chapters dealing with the geography and history of France, and by poems and fables mostly relating to the history.

LECTURES ET EXERCICES.

Small crown 8vo, bound in cloth, price 2/- each.

COURS MOYEN. By M. P. ANDREWS, M.A.

FOR JUNIOR FORMS. Chapters on France and its History, 1643-1804. To meet the requirements of candidates preparing for the Junior Locals and similar Examinations. Illustrated. With or without English Notes.

COURS ÉLÉMENTAIRE. By F. B. KIRKMAN, B.A. Oxon.,

Notice must be given of all remittances through the Post Office from abroad stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

"CLASSICS AND THE AVERAGE BOY."

THE *Times* during the past month has opened its columns to a correspondence provoked by a brilliant article contributed to its *Educational Supplement* by "A Public-School Master." It has been comparatively easy to repel attacks on public schools as the babble of ignorant parents or the spite of masters who have failed; but their present critic cannot be thus dismissed. He knows what he is talking about, and he has no personal grievance. His charge against public schools is that the average boy gets an education unsuited to his powers or gets no true education at all. Public-school education has been warped and perverted by the endowment of classics. Though Latin has long ceased to be a subject of utility, it still keeps its prerogative at the Universities and their feeders, the public schools, and in the examinations of the Civil Service Commission. The public schools curriculum is based on the assumption that every boy will become either a Civil Servant or a professional man. To this traditional fignment four out of every five public-school boys are sacrificed, and the parent acquiesces because he fondly hopes that his son will prove the lucky fifth. Public-school masters themselves are self-deceived by adherence to the exploded doctrine of formal training, the belief that faculties exercised in classics will overflow and be transferred to any other subject, that a boy whose Latin prose and Greek accents are faultless will be competent to balance a ledger or manage a ranch. The attack was supported by the *Times* in a leader and by classical scholars, such as Canon Papillon, as well as men of science. The defence was singularly weak. Mr. Gilkes attempts to shift the blame. The fault lies with the average boy who is, and always will be, a slacker, whatever the subject, and on the home which does not back the master. An Eton master writes: "When once a boy has reached the standard of entrance into Oxford or Cambridge, he is allowed a large choice of subjects." *Sero medicina paratur.* Dr. Rouse rides off with a pun and a simile, "a beggarly modicum of Greek—an odd epithet for those who try to beg off.

I desire a modicum of Greek which might be compared to a well invested nest-egg."

Had the critic been content to attack he would have been inrefragable, but at the end of his article he incautiously propounded a new model and laid himself open to a telling retort "To the average boy we ought to teach sufficient of classics and the liberal subjects for culture, accompanied in the early stages by a curriculum wide enough for him to reveal his ineptitudes and discover his aptitudes, and in the later stages by special knowledge of subjects which he can carry to an advanced stage and which, when possible, should bear on his occupation in after-life."

If it had done nothing but provoke the admirable letter from the Head Master of Sherborne, this controversy would not have been unprofitable. "Fireworks!" exclaims Mr. Noel Smith (like Mr. Burchell's "Fudge!"), "imagine a wretched head master giving these as the general directions for framing an actual curriculum!" Having brushed aside in a sentence the latest constitution of an Abbé Sieyès, he goes on to acknowledge that the present discontent is well founded and to expose the root of the malady. "We do not make the best of the average boy, and we do sacrifice him in a larger measure than is necessary to the boy of more than average ability . . . to the cultivation of a very fine but costly product, of which the first-class Government official and the first-class professional man may be taken as types." The sin lies at the door of the Universities. They dominate the curriculum, and, so long as Oxford and Cambridge demand Latin and Greek for entrance, the average boy who intends to go or has a chance of going to Oxford or Cambridge must devote to Latin and Greek a considerable portion of his time which might be better spent. "I believe that a large number of average boys (not all) would be better educated without Latin or Greek."

We cannot now pursue the subject or follow Mr. Noel Smith in his clear exposition of the reforms that are needed at Oxford and Cambridge before a head master can do justice to the average boy. We fully agree with "A Public-School Master" that our public schools are not abreast of the times and neglect the masses for the classes—or shall we say the classics? It is none the less true that in the last half century they have advanced farther than in the three preceding centuries. They have admitted, if they have not welcomed, modern subjects. They have arranged alternative courses, and conceded, though at too late an age and with too many restrictions, free choice of subjects. It remains for them to dethrone the idol of formal training and abandon the supremacy of the classics. This will not come to pass till head masters have submitted themselves to professional training.

AFTERTHOUGHTS ON "WHAT IS AND WHAT MIGHT BE."

By SUSAN PLATT.

MR. HOLMES'S book is now in its third edition. It is having an undoubted influence upon the minds of those who take education seriously, and it demands more than a fleeting attention. There is much in the book that is wise, some that is inspired, but again much that is questionable. The distinction between mechanical obedience and vital obedience is fine and well put, and appeals to me strongly, for too many of us still make a fetish of obedience in our dealings with the little child, and vie with illiterate nursemaids in exacting absolute and immediate response to our commands. For this, and for his belief that the child comes to us sweet, pure, wholesome, and divine out of the Infinite, I indeed thank him.

Again, I am with him in his crusade against competitive examinations, against external rewards and punishments; on these points he has many helpful suggestions. With most of his ideas as to "What might be," I am in perfect sympathy. But that "What is" is as bad as he paints it, I cannot

believe. My own experience, a somewhat large and varied one, does not endorse it. I have read no criticisms of the book, and perhaps what I have to say has been said before more ably. But it seems to me that even if "What is" gives so much reason for despair, yet Mr. Holmes is more often wrong than right as to the causes that have led to this state of things.

He runs to death his theory of the domination of the Western idea; yet in China, which is Eastern enough, the examination system has flourished as rankly as anywhere! And I find nowhere in the book (though surely I must have missed it!) any mention of what to my mind is the paramount cause of failure—I mean the impossibly large classes which still prevail in the elementary schools of our great towns.

That our present system is more or less of a failure I am bound to admit; yet even Mr. Holmes must allow that our elementary schools have helped to produce men and women who are the salt of the earth. Nor am I probably the only reader to tire of his perfect Utopia and of the perfect Egeria, and to think upon numbers of bright enthusiastic training college students, and devoted men and women toiling in slums and back streets. Long before the days of Care Committees and school nurses, I have known teachers who have cleansed the dirty children, fed the hungry, and clothed the naked. Egeria, out in the sweet country air, with a handful of children, may well be idyllic. But what would Egeria do with a class of eighty-seven? Would she not, perforce, exact "mechanical obedience"? I have been in and out of our London schools for years, as supervisor of students and as Inspector, and I know well how all one's best ideas come to wreckage over the large class. Mechanical methods, mechanical obedience, too much talk—no teacher in her heart thinks these things ideal. The teacher of the future, with forty children, will have a better chance. But did Egeria ever handle a class of forty?

Again, most of us have seen or at least heard of the infant teacher who gives out interesting material to a class of sixty infants, and then destroys all their natural eagerness and enthusiasm by the command: "Fold arms, and do not touch these until I tell you." Mr. Holmes would justly deplore that attitude. Yet he himself mentions, with approval, having seen historical scenes acted with vigour by one of Egeria's classes, and applauded loudly by those who were allowed to witness them, *while the children of another class drew flowers in the same room and never lifted their eyes from their desks!* (page 158). This does indeed seem beyond belief with children who are allowed their natural keenness. Does it not occur to Mr. Holmes that this class of achievement is precisely on a par with that mentioned above, and that those who seek "What might be" may well cite this as being just what they would wish to avoid? Compare also his own remarks on page 175.

Then again he praises Egeria (still in the lovely country with her handful of children) for coming to school at 8.45 or earlier. But I know that most of the hard-worked town teachers do this, and not only meet and talk with their children at school, but often walk with some of them from home to school. Every day during many months I saw two poorly clad little girls waiting at St. Pancras Station to escort to school a teacher who came by a train that was due before 8.30, and very charming it was to see how affectionate was the daily greeting between teacher and taught. This, let me remind Mr. Holmes, is only one concrete example of "What is."

Many of the special virtues claimed for Egeria's school exist also in other elementary schools. It is not so very uncommon for elementary-school children to write real letters to real people (instead of sham ones) in school hours. In numberless cases the older girls (and boys) look after the welfare of the little ones. Many elementary schools, working under very difficult conditions, aim at making the less crowded higher classes self-governing. Shopping as a means of rousing interest in arithmetic (and incidentally in housecraft too) is quite common in London schools. The "damming back of the child's energies" is almost entirely the result of the

teaching of children in numbers so great that the child questioner must be repressed.

Mr. Holmes does, indeed (on page 196, and perhaps elsewhere), draw attention to the devotion of some teachers in the lowest quarters of large towns, giving special praise to the Roman Catholic schools. I, too, have known sweet and womanly Roman Catholic sisters who come up to his description. Yet, if he is right in his diagnosis of the causes of the evils, how does it happen that a religion which certainly exacts mechanical obedience to authority can produce such flowers as these? That is one of the contradictions which Mr. Holmes has to face. That blind obedience to authority leads in the long run to anarchy is only too true. But, I repeat, the cause is not the creed of Western Christendom, but monstrous classes.

Dare I breathe that a second great cause of evil, not dealt with by Mr. Holmes, is the giving of free education with one hand and the taking away of parental responsibility with the other? At this conclusion I have arrived after years of close observation of schools and children and their surroundings. How we are to get out of the slough in which we now welter I know not. By no means unique, or altogether without logic of a sort, is the state of mind of that parent who, after her child had been taught, and fed, and medically inspected, and treated at the school clinic, wrote and demanded that she should also be washed at the school, "as me and the other ratepayers pays for the basins"! Times without number I have seen mothers spending their mornings in the public-house while in the school next door the teachers were slaving for their children, educating them at the State's expense. If the home is bad, what chance has the school? If the mother is demoralized by our very effort to help the child, will not the home in turn demoralize the child? Every one knows that the poor, struggling, respectable mother who keeps her child clean, and if possible whole, is not the one who receives the most help. Incurable mothers and fathers should be forced to work to help to maintain their children.

We dare not let the children suffer. The State is waking up to the fact that it cannot in fairness make a demand on the child's brain if the body that nourishes that brain is ailing, or underfed, or underclad. The demand, "You shall come to the State school and learn," cannot logically or fairly be made without some regard to the child's physical fitness to learn. But should not our aim rather be to provide decent homes and steady work at fair wages for all; to give fewer licences to public-houses, to encourage the creation of respectable coffee-houses and poor men's clubs; to give the child a home that will not be a standing contradiction to the efforts of the school, and to make all parents responsible for their children? We have to think of the moment when the child leaves the school, when the State suddenly ceases its direct control, the moment when the home becomes paramount for evil or for good.

These are problems that are baffling the ablest brains all over the world. Yet every one of them must be met before the questions raised by Mr. Holmes's book can be fully answered. But it is pleasant to think that even now there are many Egerias who, amid difficulties more disheartening than those of the clever lady whom Mr. Holmes cites, have nevertheless succeeded in making the slums around them into gardens of Allah where many child-flowers grow.

COLONIAL AND FOREIGN NOTES.

GERMANY.

By a recent ministerial decree, the duration of a lesson, or "hour" (*Stunde*) has been fixed at 45 minutes for all the higher schools of Prussia. The total length of the intervals (*Pausen*) is to be as 1,000 to there must be, on an average, an interval of ten minutes to every lesson, so that for five lessons 50 minutes of interval must be allowed. But the intervals are not to be all of the same length.

The
Short Hour.

whilst there must be a break after each lesson, a longer break is to follow every two lessons. The short hour (*Kurzstunde*) of 45 minutes is to be given, without any deductions, to teaching. The teacher must make entries in the class-book, and do whatever can be done without the participation of the class, at some other time. When circumstances render it desirable, the normal six lessons of the day may all be arranged for the forenoon. This will take place upon the proposal of the teachers, without special ministerial sanction; but only if it may be assumed that the majority of the parents concerned are not likely to raise any objection.

The *Hochschul-Nachrichten* is raising its voice against *Schnellzug- und Ehren-Promotionen*, that is to say, against the creating of doctors at an express rate, and *honoris causa*. At a small University

Doctors
again.

like Rostock the fees payable by Doctors of Law at graduation yield a sum of £200 for each ordinary professor (*Ordinarius*) in the Faculty of Law; at Heidelberg the amount is about £525. Heidelberg has long been known for the easy grace with which she bestows the doctor's hat. In a recent year, out of 222 doctors 155 had never matriculated as students of the University. The daily press has just been reporting her liberality in the year 1910 11, when no less than 392 doctor's hats were bestowed, 213 in the Faculty of Law, 89 in Philosophy, 63 in Medicine, and 27 in Natural Science and Mathematics. The technical *Hochschulen* seem to be producing honorary doctors on a liberal scale.

Austrian papers, says *Hochschul-Nachrichten*, relate that the German Emperor has expressed himself opposed to superfluous *Promotionen*, at least so far as he himself is concerned, and has declined further

The Kaiser as
Doctor.

honours of the sort. The news is not yet confirmed from German sources. His Majesty is in Law a Doctor of the Universities of Oxford, Berlin, and Pennsylvania; in Medicine he is a Doctor of Prag; in Mathematics and Natural Science, a Doctor of Klausenburg. The Universities of Prag and Klausenburg were anxious to send deputations to Berlin (with esquire bedels in historic dress, and so forth) in order to place the insignia on the royal person. The Emperor's good taste thwarted the scheme, and the *testamurs*, at his bidding, were forwarded to Berlin through diplomatic channels. It is believed that the hint will prevent any addition to his academic distinctions for some time to come.

At Breslau, when January was beginning, died Felix Dahn, a teacher in several forms, and so well known to teachers throughout the world that to many it will seem as if an intimate friend were lost. His

Death of
Felix Dahn.

influence abroad was due to the fact that he was the most German of Germans, it being an established principle that the culture which is most inspiring is that which is most unlike our own. Rare among Germans—and, indeed, among men generally—was the versatility with which his genius expressed itself. By vocation he was a jurist, Professor at Breslau of Law, Constitutional Law, and the Philosophy of Law. A little book which he wrote in 1870, "Das Kriegerrecht" (The Law of War), giving the proceeds for the relief of the German wounded, became a popular manual and was translated into French. As a historian he was the author of the standard "Urgeschichte der germanischen und romanischen Völker," of a preliminary study of "Procopius von Casarea," and of that vast collection of materials, "Die Könige der Germanen." His historical studies inspired him to romance and to story-telling. In "Ein Kampf um Rom" he related the fall of the Ostrogothic kingdom in Italy; but more successful were his stories, "Odins Trost," "Felicitas," "Bissula," and that little pearl of prose-poetry, "Sind Gotter?" Moreover, he was a dramatist and a lyric poet. From a selection of his poems that he himself made in 1900 we venture to quote, as embodying his creed, the close of one called "Mein Evangelium":

"Und wer an Schönheit heilig glaubt,
Dem ruht nicht Furcht, nicht Lust das Haupt;
Unschönes hat an ihm kein Teil
Und er gewann das höchste Heil:
Er lebt in selb'ger Harmonie,
In Glanz und Duft und Poesie."

HUNGARY.

The Minister of Public Instruction has laid before the legislative bodies a Bill relating to the foundation of Universities at Pressburg and Debreczin. At Pressburg there will be Faculties of Law, Medicine, and Mathematics and Natural Science; at Debreczin Faculties of Theology (Reformed Church), Law, and Philosophy and Philology. In addition to contributions made by the two towns, an annual sum of two million *Kronen* is to be allocated in the Budget for ten years to support the new academies.

New
Universities.

FRANCE.

The Ministry has communicated to the journals official statistics showing the population of public secondary schools on November 5. The schools of all kinds show growth, the total increase on the previous year for *lycées*, *collèges*, and secondary courses, boys and girls taken together, being 1,571. *Lycées* for boys have increased by 576; *collèges* for boys, by 145; *lycées*, *collèges*, and secondary courses for girls, by 850. It is noteworthy that this year, as in every year since 1905, the classes in which Latin is taught have gained upon the Latinless.

An interesting circular has been issued with regard to the teaching of singing in *lycées* and *collèges*. We summarize it briefly. Choral singing, when it is the disciplined expression of generous sentiments, may be a very valuable auxiliary of other forms of instruction. That is why Victor Duruy laid down in 1865 that courses of vocal music should be obligatory up to *Quatrième*, optional in higher classes. The programs of 1902 kept singing as obligatory up to *Sixième*. Moreover, schools should be able to give brightness and élan to social gatherings by the rendering of choral songs. For these reasons the Minister (it is M. Steeg who signs) desires that every boys' school and every girls' school should have its choral society, forming a bond of union among the members, and giving a voice, a "soul," to the community. No new claim upon the timetable is implied: the singing may be included in the ordinary exercises of the class. The teacher will address himself to all his pupils—day and boarders: such of them as have no sense of music *he will reduce to silence*, making them mere auditors. As to method, the two great underlying principles are those formulated by the Musical Commission of 1881: (i) Never begin with theoretic notions and abstract definitions; address yourself to the instinct of imitation. (ii) Place theory after practice, by steps parallel to the exercises, and simplify it as much as possible. Recommended are popular songs in which music and words are combined in a form appropriate for the young, selections from a Béranger, a P. Dupont, or a Désaugier, and the simplest songs of the French Revolution (Catel, Méhul, Rouget de Lisle, &c.).

UNITED STATES.

The New York women teachers won the battle of "equal pay for equal work," and Grace Strachan, leader in the fight, is the heroine of the day. But it is of other things that we would write now. In any educational system primary education is of perhaps the highest importance. Its quality depends on the manner in which time is allotted, and the use made of the allotted time. Boston has been looking into its educational efficiency, and publishes a table to show how, in the elementary schools, time is distributed among the various subjects of instruction:—

	GRADES.								Total Minutes per Week.
	I.	II.	III.	IV.	V.	VI.	VII.	VIII.	
Arithmetic	25	210	...	210	...	270	...	230	1,635
Drawing	100	95	...	90	...	90	...	90	735
Elementary Science	30	30	...	30	...	45	...	45	330
Geography	—	—	...	150	...	150	...	150	690
History	—	—	...	30	...	30	...	120	450
Manual Training or Household Science	—	30	...	30	...	120	...	120	660
Music	60	60	...	60	...	60	...	60	480
Opening Exercises	60	60	...	60	...	30	...	30	330
Physical Training	60	90	...	80	...	80	...	80	640

Intervals	200	200	...	200	...	100	...	100	1,100
Reading and Literature	735	480	...	455	...	190	...	165	2,560
Spoken and Written English	230	245	...	245	...	305	...	285	2,150
Totals	1,500	1,500	1,500	1,500	1,500	1,500	1,500	1,500	12,000

President Butler's Report (for 1911) on Columbia University is good to read. "No other University in the world," he tells us, "is just like it in scope, in organization, or in aspirations." It has come to have more points of likeness to the Universities of Paris and Berlin than to any American institutions of learning. Its task is to set the standard of performance for higher education in the American democracy. That it will prove equal to that task we have no doubt; especially as the munificence of American citizens frees it from sordid cares. The grand total of gifts in money alone made

to the several corporations included in the University for each of the ten years last past is as follows:—

1901-2	...	1,082,581	dollars
1902-3	...	1,721,895	"
1903-4	...	1,783,138	"
1904-5	...	1,960,247	"
1905-6	...	1,299,909	"
1906-7	...	1,360,590	"
1907-8	...	1,077,933	"
1908-9	...	974,637	"
1909-10	...	2,357,979	"
1910-11	...	2,932,655	"
		16,551,568	"

We print the table to stimulate the liberality of the rich in England towards our English academies.

NEW ZEALAND.

We may sum up the Report (for 1910) just received in a homely fashion: John Bull's favourite daughter is caring for her children well. To deal first with primary education, the number of public schools open at the end of 1910 was 2,096, as against 2,057 for the year 1909, an increase of 39. The average attendance was 2.2 per cent. higher than in the previous year. It is interesting to observe that 25 per cent. of the children were more than twelve years of age. For every 100 boys on the roll there were only 91 girls; for in New Zealand, as in England, there are parents who do not understand that education is as necessary for the girl as for the boy. Of private schools 131 placed themselves under State inspection. Grants are made to the Local Education Boards to help them with the conveyance of children to school, and, for the lower standards, free school books are supplied. In the year 1910 the average salary of the teachers (pupil-teachers included), was £134. 8s. 8d., or £2 higher than in the preceding year; every head teacher is provided, in addition, with a house or with an allowance for rent. The proportion of certificated teachers is increasing. The training colleges in the four chief centres of population were in full working order during the year, all having approximately their full complement of students.

Secondary education is given in four groups of schools: secondary schools, district high schools, day technical schools, and Maori secondary schools, the total number of pupils in them (which in 1909 was 8,203) being 8,988. Now the population of New Zealand, according to the 1911 census, was 1,058,033, so that the proportion of persons receiving some form of day secondary instruction during the year 1910 was 85 per 10,000 of the population. In 1906 the corresponding proportion was 72.7 per 10,000; thus there has been a steady development of secondary education during the past four years.

We may compare New Zealand with other countries. The following figures, so far as can be gathered from the reports, represent the position for the year 1909-10:—

United States	...	95.8	per 10,000
New Zealand	...	85.0	" 10,000
England and Wales	...	55.2	" 10,000
Scotland	...	42.4	" 10,000

As to higher education, the University of New Zealand is an examining, not a teaching, body. Each of the four University

Colleges affiliated to it specializes in certain directions, and, to further this purpose, Government makes to each an annual grant of £2,000. Otago University has attached to it Medical and Dental Schools and a School of Mining and Metallurgical Engineering; Canterbury College has a School of Engineering (mechanical, electrical, and civil); Auckland University College has a School of Mining and Metallurgical Engineering and a School of Commerce; while the grant to Victoria College is intended to enable it to specialize in Law and Science.

Special institutions are provided for the deaf, the blind, and the feeble-minded; and, in certain cases, children are placed under the guardianship of the State.

Some noteworthy Details.

The number of Maori children is not diminishing, but rather increasing, there being 8,963 in primary schools, whilst 378 boys and girls were, in 1910, cared for in higher boarding schools. Of the latter number, 51 boys and 83 girls held free places provided by the Education Department. These facts may be instructive to those who believe that the British Empire, as it spreads, exterminates the natives with the gin-bottle. We regret to see that some of the hospitals obstruct, or refuse to assist, the training of Maori girls as nurses. Looking at the whole state of education in New Zealand, we find that the main difficulty there, as elsewhere, is to keep the pupils in the secondary schools for an adequate time. At present the average time is 2.56 years. Upon the cause of the difficulty we quote from the Report:—"Except in the comparatively few cases where it is the intention of the parent to send the pupil on to the University, the parent is naturally inclined to begrudge the years spent by his child in learning mathematics and foreign languages, and to consider that he is better qualifying himself for the business of life if he is placed immediately after leaving school in some employment, and perhaps sent to evening classes at a technical school. In the past there has no doubt been some ground for this belief, but the present movement towards making the work of the secondary schools more vocational in character will tend to overcome an objection which has hitherto been well founded."

VICTORIA.

With the beginning of this year considerable changes are being introduced into the educational system of Victoria. The Education Act of 1910 laid down that national education must be developed as a whole the parts being all aptly co-ordinated. The elementary school, as the basis of the system, is the first to be remodelled, and a general scheme for its governance has been drafted by the Education Department and submitted to a conference of inspectors and teachers. Under this scheme the old method of classification is abolished, and courses are to be introduced corresponding to the years of elementary-school tuition. Compulsory attendance is required on the part of children between the ages of six and fourteen. Children under six are in the kindergarten, but the eight years proper of a child's school life will be divided into periods of two years each, the two years representing a course. The classes under the new arrangements will be grouped into divisions or departments, and these will be placed under the supervision of junior teachers—an innovation that will involve an important reorganization so far as the teaching staff is concerned.

REVIEWS AND MINOR NOTICES.

The Cambridge Medieval History. Planned by Prof. BURY and edited by Prof. GWATKIN and Mr. J. P. WHITNEY. Vol. I. (20s. net. Cambridge University Press.)

This History will doubtless be indispensable for some time to serious students of the Middle Ages; and we hope that it will have a wide currency among general readers also. In many places, it is true, the builders must necessarily suffer from a lack of solid foundations; considerable tracts of medieval history have scarcely been touched by objective scientific research, and are still given over to controversialists or apologists; but many scattered rays of light have been cast even in such places, and a book of this kind is admirably calculated to focus or co-ordinate such scattered beams. On the other hand, although the editors have been able to profit by the experience of "The Cambridge Modern History" and "History of English Literature," certain defects seem in-

separable from any co-operative history of this kind; nor can it safely be asserted that the different contributors to this "Medieval History" repeat each other, or contradict each other, less frequently than their colleagues of the sister compilations. One matter, however, in which the editors could easily improve, not only upon their predecessors, but upon this volume, is that of the index. With all strictly proper names we seem to be safe; but technical terms of primary importance, even when italicized, are not registered; nor does the index enable us to take a bird's-eye view even of the most important subjects. Yet the successive stages of army organization, at least, would seem worthy of separate registration; so, also, with such subjects as education, slavery or serfdom, and a dozen more which might be mentioned. By the present system, we search in vain for what Prof. Lethaby may have to say about glass work in his admirable chapter upon Art; only, as we turn the pages for something else, our eye falls by chance upon "Slade Collection, Glass in, 606 seq." We are the bolder to press this point because the remedy is so easy, and would go so far to correct that tendency to incoherence which is an essential disadvantage of collective historiography. Any system which would enable the student to trace chronologically the main currents of civilization from beginning to end of these eight volumes would very much increase the value of the book.

Another even more necessary question is that of foot-notes, the absence of which was very much deplored by readers of "The Cambridge Modern History." Not only that the writers are often compelled to tread upon debatable ground—and these controversial points will come more and more into prominence as the History advances to the later Middle Ages—but in many other ways this practice of quoting without reference is most tantalizing to any reader of ordinary inquisitiveness. Dr. Lindsay, for instance, writes (page 93): "we find men and women in the beginning of the sixteenth century enrolling themselves in several religious associations of different kinds (witness Dr. Pfeffinger, a member of thirty-two religious confraternities)," &c. But how shall Dr. Pfeffinger witness, of whom we have never heard? and how can we hear of him without a teacher who will vouchsafe us some reference? Our biographical dictionary knows him not, nor does the first volume of Janssen's "Geschichte des Deutschen Volkes beim Ausgang des Mittelalters," which we thought ourselves fortunate to have at hand; for lack of just six timely words at the bottom of Dr. Lindsay's page, this Dr. Pfeffinger is still, and may ever remain, a mere Mrs. Harris witness to us, gladly as we would have made the acquaintance of so interesting a figure. Mr. Stewart, again, tells us on page 571 how "even the Fathers are deeply tinged with it [the classical rhetorical training], and Jerome himself admits that one must always distinguish in their writings between what is said for the sake of argument (*διαλεκτικῶς*) and what is said as truth." A most interesting statement to us, and to our neighbour, perhaps, most disputable; he will argue that, however correctly Jerome may be quoted here, much must depend upon the context; and we, of course, admit his argument. But Mr. Stewart gives us no hint of the context; so our neighbour and we must still remain at variance until we have read through the five folio tomes of Jerome, or as many of them as may be necessary to verify this crucial quotation. Scientific history cannot thus be written; and we could wish that not only three or four of the contributors to this volume, but every one of them, had broken loose on this point from editorial control, and furnished their contributions with the ordinary helps to a serious reader. Even in a work of this size, no scholar can count upon writing so accurately or so exhaustively but that many readers will wish to follow the subject more fully, along lines which he can have only indicated.

The articles dealing with chapters of Kulturgeschichte seem to us more interesting, on the whole, than those on the political history of the period. These latter suffer inevitably by comparison with Gibbon's narrative; few of the writers succeed in attaining the just proportion which governs Mr. Barker's chapter, for instance; and even in Mr. Barker's

chapter the facts seem overcrowded here and there. The ninth chapter ("Teutonic Migrations," by Dr. M. Manitius) is German in the worst sense, one weltering chaos of detail. Dr. Peisker's, on the contrary ("The Asiatic Background"), is full of life and admirably proportioned; but it has evidently suffered badly at the translator's hands. There are many sentences which the editors ought not to have passed—e.g. on page 334, the ten lines following "Hence a homogeneous," &c., cannot be grasped without constantly retracing one's steps; from beginning to end the article is obscure because the translator has not taken the trouble to break up sentences which were evidently intelligible enough in German, where the inflections keep us constantly in the right track. Here and there are actual blunders; "from the middle," on page 355, evidently misrepresents a German *aus*, which in that context should have been translated *of*. Again, on page 337, we read: "They get terribly thin; indeed, sheep, camels, and oxen perish when the snow falls deep, and the horses in scraping for fodder trample down the plants and make them uneatable; or when ice forms and shuts out sustenance entirely." Moreover, even the original English contributions sometimes leave much to be desired in the matter of style. Towards the end of page 92 is an *it* which we can trace to its antecedent only by climbing back five lines, over the bodies of a dozen intervening nouns and pronouns. At the top of page 94 two *its* in one short sentence refer to widely different nouns. On page 115 comes the following amorphous sentence: "They had high hopes of a pagan reaction under Maximus, who had defeated and slain Gratian; under the short-lived Emperor Eugenius, who promised, on his leaving Milan to meet Theodosius in battle, that, on his return, he would stable his horses in Christian basilicas." The volume, as a whole, does not bear out the ancient tradition that a classical training forms the best English style; Prof. Dumoulin's and Dr. Pfister's contributions, even in translations, read far more easily than some of the home-made articles. Yet, sadly as the style falls below the scholarship in too many parts, we can honestly repeat that the general reader may find almost as much reason as the scholar to welcome this solid and laborious compilation.

Treatise on Practical Light. By REGINALD S. CLAY.
(10s. 6d. net. Macmillan.)

Within the last twenty years the art of the optician has made enormous progress, and the microscope and the camera have affected numerous departments of industry. Obvious as are their applications in journalistic enterprise and in the ubiquitous cinematograph, these superficial achievements are far outweighed by the more solid gain in the well-being of the community which has been made possible by the advance in practical optics. In this advance Germany has led the way; and at the present time the sale of Continental lenses in this country represents a very large sum and is increasing. Also it must be admitted that the products of Zeiss and Leitz have won their way by sheer merit. Unfortunately for this country, the neglect to train foremen and managers of scientific works has been most pronounced in the optical trades, and few qualified teachers exist. In our schools and Universities the courses of optics are either sterile or else deal with the fascinating, but comparatively non-practical, questions of interference, anomalous dispersion, &c. Of the practical problems in optics which have to be faced by manufacturers, the ignorance of many physicists is abysmal. Those who desire to see technical instruction raised to a higher degree of efficiency in this country must welcome the appearance of Dr. Clay's book.

There are about four hundred practical exercises in the book, and quite 90 per cent. are really well worth performing. They are so devised as to show the reasons for the construction actually adopted for instruments of first-rate performance, and the attention paid to aberrations and right insistence on the importance of stops are noteworthy features. The apparatus is selected with judicious economy, home-made appliances are used where advisable and not otherwise; thanks to the author's experience as a teacher, he has been

able to cover a remarkable range of work with comparatively little outlay. The treatise will be of great service in colleges and technical institutes.

We wish, however, to call the attention of science masters in schools to the virtues of "Practical Light." Boys are much interested in the working of the camera, the optical lantern, the telescope, and the microscope. The usual intermediate science courses are remarkable for the unanimity with which they stop short of practical utility, yet there is no demand made in this book upon the student's mathematical knowledge which is beyond the range of a sixth-form boy. The apparatus employed in the exercises exhibits the remarkable skill of the author in inventing economical, yet efficient, methods of measurement. There is naturally very much more in this treatise than can be wisely attempted in school; but every teacher of physics will find valuable suggestions, especially with regard to the principles of construction and the practical testing of optical instruments, and it is to be hoped that several of the exercises will find their way into the physical laboratory courses of public and secondary schools.

The following points might receive further consideration when a second edition is undertaken. In the first place, it is not wise to begin with pin methods. Beams of light are far more instructive, and give an actuality which the pencil lines lack. Accordingly beams of light should be used at the very beginning, both in the lecture room and in the laboratory. Pin methods should merely supplement this work; they may be used for home lessons and they are convenient and inexpensive. On account of the latter qualities pin methods usually receive more time than they are worth: they are pedagogically feeble, the teacher is apt to suppose that the boys see as much in them as he does; but our experience has been that boys learn more from an hour with actual rays of light than in six hours with pins.

Again, why should Gaussian methods be postponed until page 175? T. P. Nunn has shown how the determination of Gauss points can be made heuristically by a class of young boys with no previous knowledge of optics. It is an open question whether it is not sheer waste of time to treat lenses on any other system than that of Gauss. The practical directions throughout the book are usually excellent; but we think more instruction should be given on the careful use of the microscope, and the directions for this and for obtaining a critical image should be introduced fairly early. In testing objectives it is essential that tube length should receive attention—in fact, the author would do well to consult a microscopist with regard to this topic. Personally, we much prefer the modern wedge form of the Abbé test plate to the older one described on page 381, and it is strange that no textbook mentions this improvement which Messrs. Zeiss introduced at least two years ago. In examining the rings and brushes produced by interference of polarized light, it should be pointed out that a wide aperture in the objective and condenser enables a thin slice of crystal to be used. The crystals of ordinary rock sections will not show many rings with the half-inch recommended for this purpose on page 477. The idea of resolving power is so important that more direct exercises on its determination should be introduced. We have found that a sheet of white paper sliding over a black surface on the table gave more accurate results with low powers than did the Cheshire apertometer, the microscope standing vertically on the black surface. There is a misprint in the formula on page 489.

To sum up, we have never seen a book so calculated to help a keen teacher of physics.

The Greek Commonwealth. By A. E. ZIMMERN.
(8s. 6d. net. Clarendon Press.)

It is a good book. Reflecting on the manner in which Mr. Zimmern has written it, we look backward. What scholarship meant for Porson and Dobree at Cambridge, for Elmsley at Oxford, all know well; for Blaydes kept their tradition alive. It was an arid business, arid as those "Graecae grammaticae rudimenta" of C. Wordsworth (Heaven may forgive

him, we never can!) on which those of us who went to school five and forty years ago were nourished. But already then a revolution had begun; Conington and Sellar, born in the same year, had revealed the Muses in a new light, and what had been a study of texts was becoming a study in literature. Then Jebb arose. At first it was the custom to laugh at "that sevenfold, spearproof target!" and so forth: but he triumphed, and long before his death the literary school of classical instruction was firmly established in England. Last of all came the stage of what the French call *vulgarisation*; we cast Plato before duchesses, and spoon-fed the British working man with Homer and Virgil. A changed type of book was now required, and its style had to be such as to win access for its substance to the lay, untrained mind.

It is in this style that Mr. Zimmern, once Fellow and Tutor of New College, at present Lecturer in the London School of Economics, has written. There breathes from his pages a certain air of "University Extension." Pray observe that we do not say the air is offensive; a book dedicated "To the two St. Mary Winton Colleges" will hardly be an example of vulgarization in the English sense, and pleasing vivacity is here joined with something of true eloquence. Yet there is in the parading some note of an address to a popular as well as to a learned audience. Would Mr. Zimmern have talked at Oxford about a "hallowing ægis"? Here again is a form of teaching which we dislike: "The plays of Euripides . . . were as deep as Ibsen and as delicate as Galsworthy." Granting that the known can be taught only through the unknown, we have a vague feeling that the parallel is inapt, and we resent it. The author might have gone on to add that Sophocles was really as intelligent as Mr. G. B. Shaw, although Mr. Shaw could not easily be induced to think so. Such illustrations look to the gallery for applause. On the other hand, the fact that the general reader is regarded no less than the student results, if we strike a balance, in a gain: there is a width of view in this work rare in classical handbooks; and the notes, covered by one reference at the end of the paragraph, do not disturb us by any insistence of appeal.

From the manner we turn to the matter. The book was begotten of a wish to realize what fifth-century Athens as a State was actually like; and Mr. Zimmern, to get such a picture as will content him, studies the geographical, political, and economic conditions of Greece. The facts that he uses as his colours are to be learned elsewhere. It has been remarked that we know more of early Greece than did the Athenians of the age of Demosthenes. Brandis's article on the *ἐκκλησία* in Pauly-Wissowa would have made Bentley stare. Has our writer, who states his facts accurately, such a mastery of them that, selecting the fit, rejecting the unfit, he can really make a convincing picture? We cannot answer the question with an unqualified affirmative. To us, at least, it seems that a superabundance of detail somewhat obscures the general effect. But the book can be read with unflagging interest, and the fullness of its (indexed) contents adds to the value of it for reference, if it diminishes its artistic merit. To whet the appetites of our readers we extract for them a scrap of folklore. "If ever you come into a place where fleas abound, cry *ὦχ, ὦχ* (*ōx, ōx*), and they will not touch you." As to Mr. Zimmern's opinions, they seem to be of the sort called liberal, and they are not always beyond the shafts of criticism. Thus he tells us that international law will some day abolish war. We may cherish the pious hope without forgetting that up to the present time war has held its own against the international lawyers. It demolished the Athenian Commonwealth, which it had built up by training the citizens in manhood, as it has demolished many other commonwealths; and, if Mr. H. G. Wells were to organize a nice little State of his own under the protection of the Hague Tribunal, there is no guarantee that some new Napoleon would not presently blow State and Tribunal away with a careless puff of his *pens*. In a better strain is this: "Art, literature, philosophy, and all other great products of a nation's genius, are no mere delicate growths of a sequestered hothouse culture; they must be sturdily rooted, and find continual nourishment, in

the broad common soil of national life. That, if we are looking for lessons, is one we might learn from ancient Greece." We can indeed still learn much from Hellas. Mr. Zimmern's book will be of high value to those who are minded to seek her gracious teaching, and it should meet with a hearty welcome both in scholastic and in public libraries.

William Pitt and National Revival. By J. HOLLAND ROSE. (Pp. xii, 655. 16s. net. G. Bell.)

Equability and common sense may have as great an attraction for the curious as the most restless genius; and we do not wonder that Dr. Rose has turned from Napoleon to Pitt. The character of Pitt was very profound, but it possessed the profundity of clear, deep water, unconscious of its mysteries. By virtue of his training, his traditions, even his reading, he was a servant of the State. He was never terrified by responsibility; he seems always to have felt equal to every task, and when the work was done, and the decision made, he turned quietly to his friends or his books. In his private life he was the same. Most people can think of some one in the number of their friends who is obviously cleverer than anybody else in his company; mental difficulties hardly trouble him; in some ways he has never grown old, but is still the boy, shy without vanity, thoughtless enough to cause pain, yet never wilful, magnificently proud because never broken; ambitious without the ambition which destroys. Such was Pitt; and, when these qualities are united in a supremely great and simple-minded man, they are the most impressive and moving in the world.

Dr. Rose has not attempted to write a memoir of Pitt; and he has acted wisely. He is not the master of a delicate and subtle style, and his friendly hammerings at Pitt's unresponsive soul might easily become wearisome. But he has done even better: he has written a very full, well informed, and able history of Pitt, so that the reader can live for a time in the great man's presence and meditate without an interpreter. If the reader does not desire meditation, and is not impressed by the wonderful ease and sureness with which the young Minister moves from reform to reform, succeeding here, giving up there, he may find in Dr. Rose the best guide to the history of England in the last part of the eighteenth century.

Among the important passages in the book are the refutation of Morgan's charge that Pitt used and spoiled Dr. Price's financial proposals without acknowledgment (pages 190-1), the excellent chapter on Pitt's Indian policy, the appreciation of Joseph Ewart as a diplomatist (page 313)—which calls to mind the late S. R. Gardiner's rehabilitation of Digby—and the admirable analysis of the causes to which the Anglo-French treaty finally owed its success (pages 344 *seqq.*). Dr. Rose brings to light several new points of interest, such as William Pulteney's letter on arbitration and the importance of an Anglo-French alliance (page 340) and the opinion of Place that the union between Fox and North dealt a death-blow to the London Society for promoting Constitutional Information, "the last expiring effort of which was to publish a volume of political tracts in the year 1784. Not until the year 1791 was this useful society revived, and then owing to the impulses set in motion by French democracy" (page 206).

Dr. Rose's interests lie largely in diplomatic detail, and students of foreign policy both here and on the Continent will have to reckon with his book. This preoccupation, however, is not only apt to lead him into extravagances—for example, he seems to us to take the Franco-Dutch negotiations in 1785 too seriously (page 318)—it tends to the over-emphasis of certain aspects of our political history which are already given more than their due share of attention. There is a good deal about public opinion in this book, but it is not here that we can realize in what a very small world Pitt and his colleagues really moved, and how poor and limited a thing public opinion was at the end of the eighteenth century. Most of the criticism levelled against Pitt to-day on the ground of his indifference to grave evils in the body politic is beside the mark, but by no means because the evils were non-existent or passed unnoticed by prophetic observers.

This volume is not quite free from misprints—e.g. "began" for "began" (page 248), 1772 for 1773 (page 50, line 3); but the most serious blemish is the occasional lapse in style. Dr. Rose is master of a capable jog-trot manner, which is not unpleasant, and it is rarely that his reader does not regret his occasional attempts to force the pace.

Nuts and Chestnuts. By the Hon. L. A. TOLLEMACHE.
(2s. 6d. net. Edward Arnold.)

"Ab ovo usque ad mala": the dessert generally comes at the end of the feast, but here the natural order is reversed. Mr. Tollemache, *spargit nuces*, gives us his nuts and chestnuts in the first ten pages, and the rest of the volume is a supplement or appendix to "Old and Odd Memories," character sketches of Goldwin Smith, Francis Newman, Lecky, and Francis Galton. We must not omit to mention a brilliant imitation of Bacon, the Essay on Scepticism, which first appeared in this journal.

We start with "A Tale of my Grandfather," an anecdote in the proper sense of the word, as it was suppressed in the "Memories" out of regard for the feelings of an uncle then alive. Admiral Tollemache, provoked by the sauciness of his sister-in-law, Lady Emily Stratford, a girl of sixteen or upward, threatened that if she repeated the offence he would spank her, and he was as good as his word. Such is the bald, bare narrative; but in Mr. Tollemache's hands it gains all the pomp and circumstance of "The Rape of the Lock." He cross-examines the witnesses and weighs the evidence with the naive good faith of a Herodotus recounting one of the marvels of Egypt, adduces historical parallels, and shows throughout the true art of the humorist, to make his hearers laugh while looking himself as solemn as a judge.

We have lingered too long on the threshold and must resist the reviewer's temptation to lay hands on the nuts so liberally scattered. Of the character sketches, the longest, and to us far the most interesting, is Sir Francis Galton. Goldwin Smith and Lecky were "nothing if not political," and an account of them which ignores Imperialism and Home Rule is "Hamlet" without the Prince. Galton, like his Boswell, eschewed politics, and, like him, was profoundly interested in social and sociological problems. We can best describe Mr. Tollemache's portraiture by contrasting it with that of another popular artist who has just published in book form his "Leaves of an Old Tree." Mr. A. C. Benson is a rapid impressionist. From scattered hints, sometimes at one or two sittings, he forms his own idea of the subject and reproduces it in flowing outlines and bold chiaroscuro. Mr. Tollemache is more like an accomplished counsel. He puts his man into the witness box, asks a leading question, notes the answer (his memory serves him as a shorthand writer), and proceeds to turn this answer inside out, seeing how far it squares with previous utterances and whether the witness is aware of the logical consequences to which it leads and is prepared to accept them. The man stands revealed to us as it were by flashes of limelight, but it is a cinematograph rather than a portrait, and often the showman's comments are of more value than the show itself. May we suggest for the new volume a classical motto?—"Castaneaeque nuces et pressi copia lactis."

Nuts and chestnuts by the score,
And of clotted cream rich store.

The Teacher and the School. By CHAUNCEY P. COLGROVE,
of the Iowa State Teachers College. (4s. 6d. net. Fisher Unwin.)

A curious volume this, combining what was best in the old school management manuals with what is freshest in the newer American treatises on the Principles of Education. It is evidently meant for students at ordinary Normal Schools, or junior students at Universities. Its specially transatlantic character will rather interfere with its usefulness on this side, though it must be admitted that English writers are well represented among the authors whom Dr. Colgrove quotes and to whom he refers his students for further reading. Barnett and Raymont and Landon figure quite prominently in

the very useful lists that appear at the end of each of the chapters for the student's guidance. Further, it must be admitted that in a subject like this there is quite a large section of the work that must be common to teachers of all nationalities and working under all manner of different conditions. But almost all the illustrations are drawn from American schools, and a good many of the points raised—for example, all those connected with the American common school—have only an academic or historical interest for English readers. The book should be in every training college library, in order that the better students may have a chance of getting at the American point of view. Nowhere can they get it more thoroughly than here.

The book falls into five parts: (1) the Making of a Teacher; (2) the Teacher as Organizer; (3) the Teacher as Instructor; (4) the Teacher as Trainer; (5) the Teacher as Ruler and Manager. The treatment is eminently practical. The author does not confine himself to laying down general principles, though he does this extremely well. He gives very definite and detailed instructions how to act under certain circumstances. So pointed are his instructions that some of our very practical teachers may be inclined to praise them by calling them "tips," but it would be unfair to the book to accept the somewhat slangy term; for the useful suggestions have no lack of dignity about them. The advice regarding the first day in school is particularly valuable. We notice with satisfaction that among the books recommended for further reading occur both "Jean Mitchell's School" and "The Evolution of Dodd," books little known on this side of the Atlantic, but properly valued on the other as useful artistic presentations of certain aspects of American educational work. In at least one American college every young teacher has to read these books at some time or other during the course. With regard to the more theoretical side there is included perhaps more than even 392 pages can well bear. Almost all the controversial points are, at least, touched upon, so that the teacher who uses this as a text-book will find materials for extended explanations. Dr. Colgrove is very skilful in his allocation of space to the different subjects, the amount given to each being in direct ratio to its practical importance. For example, a relatively large space is devoted to that fundamentally important, but too frequently neglected, subject—the teaching of the pupil how to study.

"Board of Education, Special Reports of Educational Subjects."—
Papers on the Teaching of Mathematics in the United Kingdom. (Wyman.)

The papers dealing with the teaching of Arithmetic have already been noticed in *The Journal*. In the remaining papers, Dr. Filon, of University College, London, writes on "The Relation of Mathematics and Physics." This is an able and clear-sighted paper, quite general in treatment, but explicit and enlightening. It points out the estrangement between the "pure mathematician" and "the physicist," notwithstanding the essential nature of their mutual dependence, and it seeks to show how they might be brought again into closer connexion.

Mr. Eggar, of Eton College, in his paper on "The Teaching of Elementary Mechanics," puts in a plea for the more real and more universal teaching of mechanics in schools. Prof. Low, of the East London College, University of London, treats of "Geometry for Engineers."

Mr. Godfrey, of the Royal Naval College, Osborne, contributes a paper on "The Algebra Syllabus in Secondary Schools." The value of this paper lies in the fact that Mr. Godfrey has clear views as to his starting-point in the teaching of algebra. That is to say, he is convinced that the study of algebra must develop from natural instincts for "problem solving" and "symbolic generalization," observable at a certain stage of development in the teaching of elementary mathematics to children. He shows how these instincts may be utilized and directed, their immediate leadings, and the possible and desirable lines of development. In view of the vagueness of purpose that has marred the teaching of algebra in schools, this paper, with other recent ones that have appeared on the same subject, should dispel the aimlessness that has hitherto characterized the teaching of algebra. Mr. Godfrey makes the subject have some point for pupils from the earliest stages, and, by the discriminating casting aside of useless work, leads to definite

practical applications, thus putting an instrument of power into the hands even of beginners.

Mr. Newbold, of Tonbridge School, in "Higher Mathematics for the Classical Sixth Form," gives a brief account of an interesting experiment with some half-dozen sixth-form boys on the Classical Side who were given four hours' mathematics a week for a year. The success of this experiment constitutes a plea for retaining some mathematics on the Classical Side till a later age than is usually the custom.

Miss Bartram, Head Mistress of the St. Pancras London County Secondary School, writes on "The Correlation of Elementary Practical Geometry and Geography"; and Miss Story, Head Mistress of the Royal School, Bath, writes on "The Organization of the Teaching of Mathematics in Public Secondary Schools for Girls." This paper is statistical rather than critical, though it contains references to recent critical papers on mathematical teaching.

Mr. Hawkins, late Senior Mathematical Master at Haileybury College, in "Examinations from the School Point of View," has made a very masterly summary of facts concerning external examinations and their effect on school work. We cannot here enter into detail about his results and conclusions, but his criticisms touch on the question of the number of subjects taken in a given examination, the pass mark from the point of view of the aim of the examination, the pros and cons of special preparation, types of question, &c. The whole paper is worthy of careful study.

Laughter. By HENRI BERGSON. Authorized translation by CLOUDESLEY BRERETON and FRED ROTHWELL. (3s. 6d. net. Macmillan.)

A translation, rough-hewn by Mr. Rothwell and shaped by Mr. Brereton (such, we imagine, was the distribution of parts), to which the author himself has put the final touches, should be wellnigh perfect, and a comparison with the text confirms this *a priori* judgment. M. Bergson is to English star-gazers the comet of 1911; Mr. Mitchell has already photographed for us the nucleus ("Creative Evolution"), and now two translations, equally competent, reproduce for us the tail, or a portion of the tail. It is comic to find an essay written a dozen years ago, and already in its seventh edition, reviewed as if it were a new work, and we shall not follow the example of the *Times Literary Supplement*. We regret that the original preface is omitted. If M. Bergson had consented to bring the bibliography up to date it would have been a valuable addition. We may note a few of the insuperable difficulties that have met the translators. Chief of these is *esprit*, for which there is no single English equivalent. *Il court toujours après l'esprit* means something more than "he is always running after a joke." *Tous les arts sont sœurs*: this natural phrase, in English, sounds to French ears as grotesque as "all the arts are brothers-in-law" would to ours. Mme de Sévigné's *J'ai mal à votre poitrine* is impossible to reproduce. *Une vitre* (page 81) should be a pane of glass, not a glass window, and "each of the series develop" (page 98) is a slip.

The Antiquary's Books: Old English Libraries. By ERNEST A. SAVAGE. (7s. 6d. net. Methuen.)

This is a volume in which not only the antiquary, but the student of history, of literature, and of pedagogics will all find their account. A man may be told by his books no less than by his friends. The test is not infallible, and it used to be said of a wealthy Cambridge don that he was ready to lend you any book in his library—and a paper knife. But, when books were rare and costly, we may be confident that they were read by their owners, and there are blood-curdling curses against borrowers who do not return. Mr. Savage has cast his net wide and gathered, or told us where to find, most that is known about books from Alcuin's library at York towards the end of the eighth century down to the catalogue of the Syon Monastery Library at the beginning of the sixteenth century.

Samson Agonistes. Edited by A. J. WYATT and A. J. F. COLLINS. (2s. Clive.)

Mr. Wyatt's edition of the play has been abbreviated for school use by Mr. Collins. It gives all the aid that a sixth-form boy will require, and few teachers would be bold enough to attempt to read it with a lower form. Perhaps something more might have been said on the relation of the *Agonistes* to a Greek tragedy, and as particular as to the metre of the choruses. Milton assuredly was attempting to produce the rhythmical effect of a Greek chorus, not to write dignified prose. We wonder whether he would have approved Mr. Wyatt's translation of Aristotle's definition of tragedy.

The Essentials of Latin Syntax. By CHARLES CHRISTOPHER MILROW. (4s. Ginn.)

We mean no reflection on the Princetown instructor in classics when we say that in our eyes the chief merit of this primer of

syntax lies in the printing. Each construction is seen at a glance. Thus:—

cum, causal, since.	Since these things are so.
Subjunctive.	quæ cum ita sint.

(We omit a middle column giving references to the standard American grammars.)

Hence, by help of a full index, the pupil can instantly refer to the construction he wants. This clear gain is discounted, we will not say outweighed, by the inevitable dullness of the "cooked" examples. No one will remember sentences like "He will say that he will hear." In scholarship we find few holes to pick. "*Honore dignus*, worthy of honour," is a dangerous rendering. "May he come!" is not "a future wish." "Would they were here!" must, according to the context, be rendered *utinam adessent* or *utinam adsint*. We fail to find the regular construction of a single oblique question, *rogavi num vellet* or *velletne*.

Senior Latin Course. By A. J. F. COLLINS and A. ROBINSON. (3s. 6d. Clive.)

A grammar and exercises combined, intended for Cambridge Senior Local candidates. It starts *ab ovo*: "Masters, you are teaching the sons of Marcus," and ends with continuous passages of easy prose. These have no connexion with the previous parts, nor is any help supplied as in the parallel French course. We have noted a few errors or oversights—"imperavit me, he ordered me; *num me victo peperisti*"; *pro* is given under prepositions with accusative only, and *sub* under prepositions with ablative only; *cordi esse* is not a locative (see Roby); "*dei beati esse intelliguntur*, the gods are understood to be happy," where both Latin and English might be improved.

Senior French Course. By ERNEST WEEKLEY and C. GILLI. (3s. 6d. Clive.)

We have already commended Prof. Weekley's "Matriculation French," which forms the book-work of the "Senior French Course," as a model of clearness and simplicity. Monsieur Gilli has added exercises, French-English and English-French, and continuous passages of the standard of Cambridge Senior Locals. The sentences are as good as disjointed sentences can be, and not of the "cabbage to make an apple pie" type, and the prose compositions are of just about the right difficulty. The assistance given in the notes to the latter might have been fuller, and we should have liked references given to the syntax. The promise of a "full vocabulary to all the words" is hardly fulfilled. We may have been unlucky, but in looking out a dozen words at random we drew six blanks.

The American Historical Review for October 1911 (Macmillan) contains articles which range over a wide field. In a paper on the monument of Ancyra, W. L. Westermann considers afresh the motive for the famous statement of his career made by Augustus, and comes to the conclusion, from internal evidence, that it was designed to prepare for the succession to the principate. Albert B. White deals with the writ, or fragmentary writ, well known to the students of the Select Charters, by which King John is supposed to have summoned a mass meeting of village juries at St. Albans in 1213. Mr. White makes an important contribution to the discussion of this writ by comparing it with an entry in the annals of Waverley for 1208, but we do not think that his explanation is quite satisfactory. We are inclined to think that the writ refers only to churches on the royal domain, but the matter is too difficult for discussion here. Mary P. Clarke's article on the work of the Board of Trade and Plantations established 1696 will be valuable to students of colonial history and of the policy of Great Britain. Other articles deal with the suggestion to offer the Regency of the United States in 1786 to Prince Henry of Prussia, and with the legal questions involved in the famous Dred Scott case.

School History of England. By M. E. CARTER. (Clive.)

This History is fuller and in more detail than the author's "Groundwork of English History," and is intended for middle forms of secondary schools. The facts are well marshalled and the style is clear and unpretentious. The apparatus—table of contents with dates, genealogical tables, maps, and full index—is a commendable feature. The story has been brought down to the death of Edward VII, and the impartiality with which party politics are treated is a pleasing contrast to the Tory bias of a recent History for children. The History is mainly political. Of social movements we hear but little, and literature is wholly excluded. Whether this is a merit or a defect we must leave our readers to decide.

We are glad to receive the second edition of Mr. EDWARD ARMSTRONG'S book, *The Emperor Charles V* (2 vols., 1910, 21s. net,

Macmillan). The need for a second edition proves that the best books do occasionally find recognition, for Mr. Armstrong is perhaps the most accomplished and surefooted of those English historians who have preferred the task of popular presentment to that of original work. He has revised his book for this second edition in the light of the publications of the last ten years, of which he gives a useful summary (Vol. I, pages xxvii-xxxi).

"Home University Library."—*English Literature, Modern.*

By G. H. MAIR. (1s. net. Williams & Norgate.)

This volume carries out the aim of the series to convey in simple form to the general reader the results of modern thought. It is as impossible to date the beginning of modern literature as of modern history, and Mr. Mair, instead of arbitrarily taking any century or reign, starts with a preliminary chapter of the Renaissance before embarking on Elizabethan writers. We cannot help thinking that he would have been better advised to stop short of contemporary, or at any rate of living, authors. The chapter on the Drama is admirable, though we would gladly have heard more of some of the minor dramatists, in particular of Ford. Shakespeare, already treated in a separate volume by Mr. Masfield, is wisely omitted. The book will fulfil its main object of sending readers to the texts, and there is a bibliography at the end to aid them. It is a pity that so good a book should be defaced by so many misprints and worse faults of carelessness. In the first chapter a line of Shakespeare is so printed that no one could tell that it is verse, and on the same page Milton is credited with the line "This way and that revolving the swift thought" (apparently a reminiscence of Tennyson's "This way and that dividing the swift mind"). Still worse, on page 200, a perfect stanza of Wordsworth is murdered—

"Rolled round in earth's *unending* course
With rocks and *fields* and trees."

"We receive *here* what we give," "*homes* where poor men lie," "lines written on the *Euganean* Hills," "Nietzsche," "Malesherbes" (for Malherbe) do not exhaust the errors we have marked. Many, too, of the *obiter dicta* are provocative, more especially when we come to contemporaries. George Eliot is not *indisputably* inferior to Mrs. Gaskell or either of the Brontë sisters. Tennyson, to whom bare justice is done, may have had a "school-boy-like pride of knowledge," but it is not fair to quote against him the blue-stocking speeches in "The Princess."

Verses. By HERBERT KENNEDY. (1s. net. Guildford: A. C. Curtis.)

These poems have been selected and published by the Charterhouse Poetry Society as a memorial to one of their members who died just a year ago at the early age of eighteen. As the work of a schoolboy they are remarkable, and well worth preserving, if only as a record of hereditary genius. Herbert Kennedy was the great-grandson of the famous Master of Shrewsbury. There is about the verses a melancholy grace, nothing of the frolic or sportiveness of boyhood, but "a sighing for something afar," the garden of childhood, the impossible She, the wilds of Dartmoor, the Dream City. Needless to say, there are echoes, and sometimes faulty echoes, as—

Now, earth-fragrant in the slowly dawning
Shadows of the blue November morning,
Little breezes sobbing
Come and go—

but here is a nearly perfect little vignette straight from Nature :—

TOM-TIT.
Bright through the veil of the dancing snow
To a wide, white world and cold—
From the wood where the Christmas roses blow
Forth 'neath the grey o' the sky—behold!
Flashing faintly blue,
Little friend, is it you
In your armour of azure and gold?
And now on the silvery bough you sit,
Good-morrow, good-morrow, my little Tom-tit.
The birds have taken their winter flight:
From summer and them did I part
In sorrow, and now o'er the cocoa-nut white
Like an echo of summer you dart—
You dear little fellow,
In gay blue and yellow,
And sunshine you bring to my heart.
A flash and a flutter and home you flit,
Good-bye till to-morrow, my little Tom-tit.

Roses, Leaves, and Old Rhymes. By ANNIE MATHESON. (4s. 6d. net. Frowde.)

The arrangement of the contents is perplexing. First comes a hymn on Christmas Day, then a preface by Prof. Herford to the

1900 Christmas edition of "Selected Poems," and then a publisher's note explaining the quaint title. There are not a dozen living poets who can reckon on a sale for their poems, and we rejoice to learn that a reprint of the 1900 volume is called for. To this Miss Matheson has added three new sonnets and a few more poems that have appeared only in other of her works. Our readers will recognize the Coronation song, "A Federal Song to the Emperor-King," and several shorter lyrics that were first published in *The Journal*, and we wish she had included the touching plea for children's holiday resorts. A reperusal of these collected poems, which cover a period of thirty years, confirms the impression of earnest sincerity. Miss Matheson is a *perferendum ingenium*, but she is also an artist, and her enthusiasm is tempered by a sense of proportion, rhythm, harmony. She is at her best when she is simplest, and some of her "Hymns for Children" will live. She is, perhaps, too fond of attempting intricate metres which betray her into obscurities or forced language, as in "For Concord," stanzas 1 and 3; but such flaws are rare.

A Book of English Prose, 1470-1900. Selected by J. H. FOWLER. (3s. 6d. Macmillan.)

Mr. Fowler is the fogle-man of English teaching in public schools, and has done more than any living teacher to show both by practice and precept what can and should be done. The touchstone he has used in this selection is "thorough truth of substance and an unswerving truth of form." Ruskin has the honour of heading the list with eight passages. In his case, does "excellence of style always imply excellence of matter"? Mr. James Bryce is the only living writer admitted. We regret the editor's decision to exclude prose fiction. An anthology without the names of Scott, Dickens, and George Eliot is *manca*. The decision has not been rigidly adhered to, for extracts from "Gulliver's Travels" and Hawthorne's "Transformation" are admitted. May we hope for a supplementary volume of the Novelists? Meanwhile we can congratulate Mr. Fowler on the attainment of his aspiration to compile "a golden book of the choicest prose."

East and West. By DAVID ALEC WILSON. (6s. Methuen.)

The object of this volume, by an Indian Civil Servant who has served for a quarter of a century in India and Burma, is to reveal the East, not as it appears to the special correspondent or the competition *walla*, but to one who has lived on intimate terms with natives. There is no philosophy or even an attempt to solve the fundamental problems of East and West. We have instead a number of snapshots, stories humorous, pathetic, and comic, *racily* told by a born *raconteur*. It is just the book to fill an idle five minutes, grateful as the cigarette to the smoker who has not time for a cigar, and warranted not to produce the effects of the "Miraculous Milk."

Geography for Little Ones. By DOROTHY L. COX. (1s. Relfe.)

This geography is recommended by its extreme simplicity and careful graduation of lessons. It would be easy to pick holes in it, but at this stage broad outlines are far more important than perfect accuracy. Thus on the first page we read, "In a map the top is always north." Again, it is strange to find as food imports of England "tea, coffee, bananas, &c.," and no mention of wheat.

BOTANIES.

Practical Botany. By F. CAVERS, D.Sc., F.L.S. (4s. 6d. Clive.)

From the University student's standpoint this is a practical elementary handbook of vegetable histology and physiology, including short courses on selected types of cryptogams and gymnosperms and the biochemistry of plants. It should be invaluable to junior University students and to demonstrators and lecturers as a reference book on details of method and procedure. A whole chapter is devoted to the discussion of apparatus, with expert advice on its construction, selection, and use. Much careful information is given on the management and preparation of material, and a hundred and one points connected with laboratory practice which bewilder the untaught student. The directions for practical and experimental work are throughout detailed and exact; they will enable the student to work through the course, acquiring those habits of thought and inquiry the exercise of which is the aim of all real science teaching.

Senior Botany (4s. 6d.) (same author and editor) is arranged primarily for candidates in the Oxford and Cambridge Higher Local Examinations. It is written with the same attention to scientific method and practical treatment, and is an expansion in parts, and a contraction in other parts, of more elementary botany books by Prof. Cavers ("Botany for Matriculation," "Plant Biology"). The chapter on Ecology is specially well considered.

Elementary Lessons on Plant Life. By D. G. SCOTT.
(2s. 6d. Methuen.)

The author of this little book gives us nothing new in method or illustration. The chapters are summaries of facts which are supposed to have been gained by practical observations outlined in the chapter headings. The language is simple and free from technicalities without being childish. It is, however, difficult to assign a use for a book of this kind; it can hardly justify its existence as a teacher's reference book; while, on the other hand, to put ready-made summaries into the hands of pupils at this stage is the last thing we are anxious to do.

British Fungi and Lichens. By G. MASSEE.
(7s. 6d. Routledge.)

This is a striking and most welcome contribution to the natural history of plants. The admitted object of the book, namely, to enable the reader to identify and name our indigenous mushrooms and toadstools, is admirably set forth in its 551 pages with the help of forty beautiful plates in colour. Practical and systematic ways of setting to work are emphasized as the real road to any knowledge of the fungi. The author clears the ground by a short survey, in lucid and non-technical language, of certain phenomena and theoretical considerations which surround their evolutionary history and which point out the "energy and adaptability" of the group. Other chapters on "How to Study Fungi," when and where to look for them, on the preservations of specimens, and on classification, are a necessary part of the preparation contained in Part I. Part II is a systematic arrangement of fungi belonging chiefly to the sub-group—Basidiomycetes. It gives full descriptions of genera and species, with the beautiful illustrations, for purposes of identification. Barely forty pages are given to the Ascomycetes, and lichens are only touched upon; the range covered is necessarily narrow considering its detailed treatment. It will recommend itself alike to the Nature student and the botany specialist.

An *Intermediate Textbook of Botany* (Longmans, 6s.), by E. EVANS, is expressly written to cover the requirements of the London Intermediate B.Sc. and the Second Stage Board of Education Examinations. The course follows these syllabuses narrowly, and topics are somewhat summarily and sparsely dealt with. Instructions for practical and experimental work occur alongside the explanatory paragraphs, but they are not sufficiently detailed to be of first-rate help to students in the laboratory. This book, in fact, could hardly satisfy the needs of examination candidates who are inclined to be real students of the subject. It suggests, too plainly perhaps, the art of the teacher who is skilled in the preparation of pupils for public examinations.

CHEMISTRY.

Outlines of Inorganic Chemistry. By E. B. LUDLAM.
(4s. 6d. Edward Arnold.)

Mr Ludlam believes that the historical method of developing the subject is the method which corresponds with the growth of intelligence of the boy, and an introductory note by Sir William Ramsay upholds this belief. It is a book which can be used with success by those who appreciate the author's standpoint, and it would be unwise for any teacher to criticize the book until he has read the interesting preface in which Mr. Ludlam justifies his procedure. The book gives an interesting presentation of the subject, and the author's work with the Clifton boys affords a guarantee that the course is attended with good results when properly carried out. It is assumed that the learners will be following some such laboratory course as that in the companion handbook, "*Outlines of Experimental Chemistry*." The sequence of subjects is somewhat original; but we think there is much to be said in its favour. The first part is devoted to early ideas, passing through the phlogistic theory to modern ideas of chemical change, elements, and compounds. The second deals with acids, alkalis, and salts, including the hydrogen theory of acids and the meaning of basicity. The third part starts with the fundamental laws and the atomic theory, and then describes the chemistry of the commoner metals. This early treatment of the metals is one of the commendable innovations in the book. The remaining part is a brief systematic chemistry based on Avogadro's hypothesis, and concludes with the natural classification of the elements. At the end of most of the chapters is a short set of test questions, such are of the ordinary examination type, and lack the happy success which characterized Shenstone's little catechisms. The book deserves the careful consideration of science masters, and some will probably find that it supplies a felt want.

Senior Chemistry. By G. H. BAILEY and H. W. BAUSER.
(4s. 6d. Clive.)

This is a clearly written book, planned on the usual lines, and containing both descriptive text and instructions for laboratory work. The first section deals with introductory subjects, the

second provides a systematic description of the most important non-metallic elements, the third treats of a few of the most important metals, and the fourth and last division is given up to chemical calculations. It should prove to be a very useful textbook for students who are preparing for an examination rather lower in standard than that of the Intermediate Science, and has been written specially in view of the Cambridge Senior Local Examination Syllabus. We do not think that experiments on the weight composition of water, carried out as described on pages 65 and 66, would be likely in the hands of students to lead to results worth having. On page 192 the old experiment of electrolysis of hydrochloric acid solution is appealed to as proving the volume composition of hydrogen chloride. This, we think, should not be done, and it is remarkable that a really satisfactory method is given in the next paragraph without any comment on the unsatisfactory process which precedes it. On page 208 some reference to the commercial value of processes for the fixation of atmospheric nitrogen might well be introduced, and a short account of the present position of our knowledge of the problem of the rusting of iron would not be out of place in Chapter XXXI. We can commend the book to any student requiring a sound and clearly written textbook.

THE WOMEN'S HOSTEL AT DURHAM UNIVERSITY.

ON January 30, as we were going to press, we received on behalf of Miss Robinson, Head of the Durham Hostel, a protest against the suppression of the subjoined letter. Our sole reason for not publishing the letter was that the facts of the case were officially stated by the President of the Durham Colleges in our January number. But, as Miss Robinson considers herself aggrieved, the manifesto shall appear. As Mr. Walton stated, the matter of the Hostel is still *sub judice*.

SIR,—We, the undersigned, being past and present students of the Women's Hostel, Durham University, desire most emphatically to repudiate the implications made concerning the Hostel in the article written by Mr. Sydney Walton in your December number.

It seems to us quite obvious that it is the work of a "man with a grievance." From his article it would appear that all those students who are not in the Hostel are living in lodgings in the city. Such is not the case—but of the eighteen home students ten are at St. Hild's Training College, and obviously cannot be in residence in the Hostel; seven are living at home; the remaining one has been living in lodgings this term, but has decided to enter the Hostel next term, which fact proves that those who are able to do so prefer to put themselves under the "wise and sympathetic management" of the Hostel rather than live in lodgings in the town.

There are written rules for the Hostel as well as for the home students, and in both bodies there are also unwritten rules or traditions which are made by the students themselves in order to keep the tone from deteriorating. These are explained to all new-comers. It is only those who have no love for the body to which they belong and no idea of public spirit who object to these traditions. The "young female student" alluded to in the article must have been one of these.

Although the numbers at the Hostel are small, there is no lack of scholarship. There is now at the Hostel a £70 classical scholar for the first time; last June, out of the three who gained distinction in the Final Arts examination two were Hostel students. In 1908 the most brilliant degree of the year in the Final B.Litt. Examination was taken by a Hostel student.

It is only natural that, during the change of constitution in the University and the replacing of the B.Litt. Degree by the Modern B.A., there should be a smaller number of women students in residence, and it is more than probable that now things are in a more settled condition the numbers will steadily increase.

Out of the students who have been and are now in residence in the Hostel, we the undersigned wish to prove by this letter that the Hostel is not unpopular and is not likely to "die without an epitaph."—Yours truly,

UNIVERSITIES AND SCHOOLS.

OXFORD.

Term is so recently begun at the time of writing that we have no news yet as to prospects of the scheme of "reform from within" which Council is bit by bit presenting to Congregation. The after-effects of the decisive rejection by Convocation of the Greek statute are still with us. The victors themselves are trying to justify their victory by proposing a scheme for reformed Responsions. It is based on the assumption that Oxford and Cambridge might unite in a scheme of preliminary examination, probably to take the form of leaving certificates, and that, were this done, they might, without making any concessions in regard to Greek, control the teaching in the secondary schools. The scheme is not likely to come to anything, if only for the fact that those members of the Joint Board who have given most thought to the possibilities of substituting for Responsions a reformed leaving certificate examination are convinced that the retention of compulsory Greek makes any such scheme impossible.

The reformers, not unnaturally, resent the way in which the opinion of resident Oxford has been overruled, and the defeat of the Greek statute has raised the question whether it is worth while going on with a scheme of reform, which, in spite of the many compromises which Council have made, may at any moment be rejected by Convocation. There is considerable talk of a Commission, and the desire in Oxford for a Commission is likely to increase. The situation is complex. For, in spite of the regulations of the Greek statute, Council has got through a good deal of its program. The Finance statute, which makes a beginning towards establishing a central board which may exert some influence on the colleges, has passed Congregation and is expected to come before Convocation this term. It is felt by many that it would be better to wait until Council has done all it can with its original program before giving up "reform from within" as hopeless. But undoubtedly the rejection of the Greek statute has brought a Commission a good deal nearer.

The Annual Conference of Tutors of Tutorial Classes met in Oxford on January 5 and 6. The Vice-Chancellor welcomed the tutors on the evening of the 5th, and Principal Sir Henry Miers, of London University, presided over the Conference on the 6th. We heard then that the students in tutorial classes now number almost three thousand. In five years the movement has already attained the size of a University.

University Scholarships.—The examiners have reported the following awards in the Ireland and Craven Examination:—Ireland and Craven Scholar—Cyril Asquith, Scholar of Balliol. Craven Scholars—John Bell, Scholar of Balliol; Charles Edward Shuter Dodd, Exhibitioner of Balliol, *proxime accesserunt*; Hon. Gerald William Grenfell, scholar of Balliol. Distinguished in the Examination—Maurice Roy Ridley, Exhibitioner of Balliol; Ernest Francis Withers Bisley, Scholar of Balliol; Arthur de Coetloque Williams, Exhibitioner of Balliol.

The Beit Prize for 1912 has been awarded to Neville Jonas Laski, Commoner of Corpus Christi.

The Delegates of the Common University Fund have invited Sir William Ramsay, M.A., Hon. D.C.L., to take charge of a Seminar in Oxford for the study of the Eastern Provinces of the Roman Empire for three years from January 1912.

CAMBRIDGE TRAINING COLLEGE.

Of the students who entered for the December Examination of the Cambridge Syndicate in the Theory, History, and Practice of Education, five were placed in the second class and one in the third class. In addition to these, two old students took the examination, one being placed in the first class (with distinction in Theory as well as in the two papers on Practice) and the other in the third class. Sixteen new students have entered the college this term; the total number is now thirty-six, all of whom have a degree qualification.

Scholarships have been awarded as follows:—A College Scholarship of £25 to Miss H. Rees, M.A. Wales, Honours German, Class I (Aberystwyth); a College Scholarship of £20 to Miss D. S. Easton, B.A. London, Honours Classics, Class I (Westfield College); Old Students' Guild Scholarships of £20 each to Miss E. M. Mulholland, B.Sc., Honours Botany, Class II (Westfield College), and Miss E. Rainer, B.A. London, Honours English and French, Class III. Bursaries have been awarded to Miss E. M. Askwith, B.A. London, Miss M. Rackham, B.A. London, Honours Classics, Class II (Royal Holloway College), Miss I. M. St. C. Tisdall, B.A. London, and Miss E. Warne, B.Litt. Durham.

WALES.

The recently published report of the Consultative Committee con-

Report of
the Consultative
Committee.

tains the evidence of two witnesses from Wales—viz. Sir Edward Anwyl and Mrs. Glynne Jones, of Bangor. No head master was invited to give his opinions before the Committee, though it must be clear that experience of an organized system of examinations, gained within the school, ought to have been valuable. Sir Edward states the official Central Welsh Board view of their examinations with great clearness and fairness. He still persists in using the mysterious term "pass examination" in his reference to the Higher Certificate Examination, even though its standard is recognized as being equivalent to that of an Intermediate Examination of the University. No one has yet quite fathomed the hidden meaning of this pet adjective of the chairman. The evidence as a whole, however, will give any one who is not acquainted with the working of the Welsh schools an excellent idea of the scope and character of the Central Board examinations. Mrs. Glynne Jones is, in places, severely critical. She has little that is good to say of the system, while considerable prominence is given to what she considers to be the weak points in it. There is a great deal in her evidence about its alleged want of elasticity, the rigidity of the examinations, the danger of overpressure, &c. Her opinion, in fact, is very similar to that of the author of the famous report of the Welsh Department. If space permitted, it would be instructive to compare the evidence of Sir Edward Anwyl with that of Mrs. Glynne Jones on each of these points. We may, perhaps, be allowed to refer to one only—"loss of elasticity." Mrs. Glynne Jones states that "the absence of alternative schemes was one of the most serious causes which had led to deterioration [*sic*] in the Welsh system," and that "the want of elasticity was the most serious defect of the whole system." There has, however, in recent years, been so much discussion of this point that it appears useless to controvert the charge. It may, however, be asked whether there is any other examination system in the United Kingdom which recognizes alternative schemes of work from the schools to the same extent as the Central Welsh Board does. Mrs. Glynne Jones's evidence seems to imply that it is a very general practice for English schools to be examined by a public examining body on their own syllabuses, which is by no means the case.

The Oxford and Cambridge Board will, it is true, admit alternative schemes under certain conditions, but so will the Central Board, provided they are educationally sound and of the proper standard. Mrs. Glynne Jones is misinformed if she believes that the diminution in recent years, in alternative schedules, is due to the shyness of head masters in presenting them, through fear that they will be rejected. The change is really due to the improvements in the regulations and schedules of the Board itself, which have rendered such schemes unnecessary. The recent regulations give such freedom and latitude to the schools that it is difficult to see how any school is now prevented from developing in any direction it pleases. Technical and commercial subjects have been given, for instance, their due share of prominence, and it is certainly not the Board's fault if the schools do not teach them. Whatever may be Mrs. Glynne Jones's opinion, the schools do not complain of "loss of elasticity" and freedom. Sir Edward Anwyl's general comment on this matter more fairly describes the position. "The schools, in practice, varied very considerably. They were not so much alike as they seemed on the surface. The risk of rigidity was intended to be balanced by the provision for alternative schemes; but often the schools did not take advantage of that, seeming to be satisfied with the opportunities they had of suggesting modifications in the Board's own schedule. To a considerable extent the syllabuses varied from year to year."

There will always remain a great diversity of opinion as to the existence of overpressure in the schools. That the work is hard and trying in the higher forms is, of course, true, but there is no compulsion on any pupil to take the Honours Certificate unless he is physically and mentally fit for the work. And if there is overpressure—Mrs. Glynne Jones supplied no evidence of its existence—it is due entirely to the exaggerated importance which parents and governing bodies attach to examination results.

The evidences of both witnesses contain some interesting information about leaving exhibitions, &c.

The Welsh Department will, in future, have under its control the administration of all grants to Wales and Monmouthshire, under Part I of the Regulations for Technical Schools of Art and other forms of

provision for further education, as well as the administration of the forthcoming regulations governing the distribution of the grants to be made by the Board, out of the Development Fund for Agricultural Education in Wales and Monmouthshire. The Board will also arrange for the issue of triennial *afca* reports on the work of each Local Education Authority in Wales. The first reports will necessarily be of a somewhat experimental character, and, in view of the

(Continued on page 124.)

The ~~Journal of~~ Times. EDUCATIONAL SUPPLEMENT.

On the first Tuesday of every month *The Times* publishes a Supplement of special value to all who wish to keep in touch with Educational thought and progress. Without attempting to compete with more strictly professional journals, the Supplement appeals to School Masters and School Mistresses, as well as to parents and students of public affairs, by means of its policy of emphasizing the national importance of education. It is edited by *The Times*, and written by *The Times* Correspondents at home and abroad, as well as by our leading educational experts. Preference is given to contributors who are engaged in the actual work of teaching and organization.

Special features of the Supplement are:

1. **EARLY** information and comment on Educational events. For example, the current issue, published on January 2nd, contains a full critical review of the Examination Report issued a few days before; and the text of the Hellenic Society's recommendations on "The Future of Greek," which was not published elsewhere.
2. **AUTHORITATIVE** signed correspondence. Recent issues have contained letters from Dr. Sadler, Mr. A. F. Leach, the Rev. Lionel Ford, the Rev. W. Temple, the Rev. W. H. Keeling, Miss Faithfull, Miss Tuke, Miss Oakeley, Sir Thomas Shann, Mr. Oscar Browning, &c.
3. **PRACTICAL** articles for teachers, and reviews of important books. On this feature we may quote *The Journal of Education*: "*The Supplement* takes the whole field of education for its province, from the village school to the University. . . . Particular articles are written by the highest authorities on their respective subjects."

The subscription rate for copies of *The Times* containing the Educational Supplement is

THREE SHILLINGS

per annum, post free inland, from all newsagents, or from Printing House Square, London, E.C.

RALPH, HOLLAND & CO.'S NEW BOOKS.

Inorganic Chemistry.

By S. W. BURNELL, LL.B., B.Sc., Chemistry Master, Walthamstow County Secondary School and Technical Institute, and A. J. DICKS, B.A., B.Sc., Head Master, Walthamstow County Secondary School and Technical Institute. Joint Author of "Plant Study in School, Field and Garden." Containing 102 valuable Diagrams and Illustrations. Price 3s. 6d.

This text-book is designed to meet the requirements of candidates preparing for the Oxford and Cambridge Junior and Senior Local Examinations, and for the Matriculation Examinations of London and other Universities. It embraces a concurrent course of theoretical and practical chemistry sufficient for the needs of students in Secondary Schools. Recent developments of the science are adequately treated, volumetric and gravimetric exercises are freely introduced, and many illustrative calculations are fully explained in the text. Questions and further exercises are appended to each chapter.

The Monsoon Region

Being Book V of The Junior Scientific Geography.

By ELLIS W. HEATON, B.Sc., F.G.S., Head Master of the Tynemouth Municipal High School. Crown 8vo, cloth, with Maps, Diagrams, and Photographic Illustrations. Price 10d. net.

The following are the other books of the Junior Series:—

Written specially to meet the needs of Pupils preparing for the JUNIOR LOCAL EXAMINATIONS of Oxford and Cambridge and the SECOND CLASS COLLEGE OF PRECEPTORS' EXAMINATION.

Questions and Exercises in Geography.

(Based on Heaton's "Scientific Geographies.")

I.—THE WORLD.

General, Mathematical, Physical, and Economic Geography
Price 6d. net.

II.—THE BRITISH ISLES.

Price 3d. net.

By ROBERT J. FINCH, Senior Geography Master, Hornsey County School.

This series of questions has been prepared in response to a demand for sets of typical questions to test the progress of the student, and at the same time to fit him for dealing with geographical problems in the examination room.

Specimen questions from recent examination papers have been included by special permission of the various examining bodies indicated in the text. In Book I there is also a full Introduction containing hints on answering questions, notes on common geographical errors, and specimen answers to typical questions.

London: RALPH, HOLLAND & CO., 68 & 69 Temple Chambers, E.C.

special organization of secondary education in Wales, and of the transfer of the responsibility for the work of technological education, they will deal mainly with elementary education.

The reports will be printed, and fifty copies of each report will be sent to the authority of the area concerned. The reports of H.M. Inspectors on individual schools will continue to be issued as before.

The Glamorgan County Council have erected a new higher elementary school at Port Talbot, which was opened by Mr. D. Lleufer Thomas, M.A. (Stipendiary Magistrate for Pontypridd). There has been a great deal of controversy about the wisdom of the

policy of erecting these schools in close proximity to the intermediate schools. The N.U.T. prefer secondary schools, and the supporters of the intermediate schools, on the other hand, fear unfair competition and overlapping. The Welsh Department appears to be aware of this danger, and so they have issued rather strict regulations as to the conduct of these higher elementary schools which will tend to minimize the danger of overlapping. French, for instance, is debarred. The difficulty in all these cases arises, however, not from the nature of the regulations governing the schools, but from their non-observance. If the Welsh Department will insist on their regulations being carried out strictly, there will not be much danger to the intermediate-school system. This is all that is necessary.

By the amended regulations for the appointment of representatives on the University Court by the head teachers of public intermediate schools, every head teacher shall be entitled, at any election, "to vote for as many candidates as there are members to be appointed." What does it mean? It seems fairly obvious and not worth an "amended regulation."

In the will of the late Dr. R. D. Roberts, provision is made for a fund to enable each of the professors at the University College of Wales, who have completed not less than ten years' service, to take a year's holiday at full salary. The salary of the substitute will be paid out of the fund. The holiday has to be spent in work bearing on his professorial duties.

The Rev. P. E. Cleave has resigned the head mastership of Llandaff Cathedral School, on account of the ill health of his wife. The Dean and Chapter have appointed Messrs. Robathan and Bruce-Smith, two members of the staff, as joint head masters.

We deeply regret to have to record the death of Miss A. M. Dobell, M.A., Head Mistress of the Pontypool Girls' School. Miss Dobell was formerly Senior Assistant Mistress at Blaenau Festiniog. She was a member of the Council of Aberystwyth College and of the Central Welsh Board. She was greatly esteemed by her colleagues as a woman of great ability, and a strong character. She had recently done excellent work in her capacity as treasurer to the Tuberculosis Fund of the Intermediate Schools.

SCOTLAND.

The lecturers and assistants in some of the Universities have been discussing proposals for a modification of the University Ordinances by which they may obtain some share in the educational government and administration of the Universities. Since 1889 the number of lecturers and assistants has been greatly increased. At Glasgow, for instance, the number of professors has grown from twenty-eight to thirty-five, while the number of lecturers and assistants has increased from twenty-three to at least a hundred and twenty-five, and similar increases have taken place in the other Universities. Many of the lecturers are in charge of independent departments—e.g. French, German, Italian, Constitutional History, and other subjects in Law, Science, and Medicine—and these lecturers are doing the same work as professors. But no lecturer or assistant is a member of any board which is concerned with the educational work of the University, except the Boards of Studies, whose sole business at present is to consider and report to the Faculties on the programs of classes and the work prescribed for degree examinations. The present condition of things has no real justification, and it can only be explained by the fact that, in this as in many other matters, the University Commissioners of 1889 made no provision for the changes which would inevitably result from their own reforms. In the meantime the Glasgow lecturers and assistants have resolved to ask for "the inclusion in their respective Faculties of lecturers whom the Faculties, with the approval of the Senate, may from time to time co-opt, having regard to their status and seniority." The Glasgow lecturers are in communication with those of the other Universities, and it is probable that a joint representation will be made to the Senates and Courts. The lecturers who are heads of departments have a pretty clear case for being made members of their Faculties; but the inclusion of other lecturers may lead to difficulties, especially if they are lecturers in a

laboratory department, the head of which is already a member of his Faculty. A laboratory department must be under the direction of one head, and there would be much trouble if he had to run the risk of being outvoted in the Faculty by his subordinates, where questions affecting his laboratory were under consideration. It has also been suggested that the functions and powers of the Boards of Studies should be extended. This can be done without a new Ordinance, and it would not necessarily conflict with the reform of the Faculties. The case of the lecturers and assistants is a very strong one, and some reform is urgently required in the interests of the whole University.

Statistics have been published showing the number of matriculated men students at Glasgow and Edinburgh Universities in each year from 1889, the date of the last Universities Act, to 1911. At Glasgow, from 1889 to 1897, the number steadily decreased from 2,101 to 1,533. Since that date it has steadily increased, until, in 1911, it was 2,054. The new Ordinances came into full operation in 1893, and the decrease from that date until 1897 was mainly due to the introduction of the Preliminary Examination and the dropping of junior classes. By 1908 the numbers had increased until they were about equal to those of 1892. At Edinburgh the number decreased from 3,602 in 1889 to 2,502 in 1900, and since that date it has increased to 2,791. Edinburgh is thus still considerably behind the figures of 1889, and it is even by some hundreds behind those of 1892. The decrease in Edinburgh has been mainly in the Faculty of Medicine, which was affected not so much by the new Ordinances as by the rise of new medical schools elsewhere, especially in England. To these numbers have to be added those of the women students, of whom there are 672 at Glasgow and 630 at Edinburgh.

Lord Rosebery, Chancellor of Glasgow University, opened the new head-quarters of the University contingent of the Officers' Training Corps, on January 12. He gave rather a gloomy speech about the tendency of foreign policy. The Principal, Sir Donald MacAlister, spoke of the educational value of the work of the Corps, which has been very successful. The Dialectic Society of Glasgow University, which includes among its former members the Archbishop of York and Mr. Bonar Law, is celebrating its fiftieth anniversary by a dinner on March 1. The University has received a bequest by the late Mr. Strang Steel of £4,000 for the foundation of a research scholarship in science.

The Ordinance for the institution of degrees in veterinary science at Edinburgh University has passed the Privy Council and will come into operation at the beginning of the summer term. On January 7 Sir William Turner, K.C.B., Vice-Chancellor of Edinburgh University, completed his eightieth year, and received many congratulatory messages. His period of service at Edinburgh University has extended over fifty-eight years.

The Annual Congress of the Educational Institute of Scotland was held at Edinburgh, on January 3 and 4. Lord Rosebery was the principal speaker at the dinner, and, as usual, took rather a pessimistic view of modern education. The President of the Institute, Dr. Alexander Morgan, of the Edinburgh Training College, in his opening address on "Education and Social Progress," took a much more hopeful view of the educational possibilities and of the value of education in the curing of social ills. Mr. D. McGillivray, of Bellahouston Academy, Glasgow, in a paper on "The Training of Teachers," deplored the decline in the number of students in training who take University courses. While 46 per cent. of all the students in training were at the University in 1906-7, to-day there were only 22.9 per cent., and this year, out of 1,141 first-year students, only 171 were at the University. He advocated (1) the raising of the standard of entrance for junior students by requiring intermediate certificates, with passes in English, a foreign language, and science or mathematics; and (2) giving to junior students the options now granted to ordinary secondary pupils, and merging the junior ordinary certificate in the ordinary leaving certificate. The decrease in the number of University students in training is by no means so alarming as Mr. McGillivray's statistics suggest, for an increasing number of those who intend to become teachers are now taking their University course before their training course, and are, therefore, not reckoned as University students in training. Sir George Kekewich gave an address on "Future Developments of Education," in which he pointed out and discussed many defects in the administration and organization of education in England, commenting specially on the "swarms of cheap, ineffective, unqualified teachers, who were engaged for no better reason than that they were cheap and that they were vaccinated." Mrs. Humphry Ward spoke on organized playgrounds and play centres, and Prof. Darroch read a useful and suggestive paper on "Democracy and Education."

The larger school boards and many of the secondary education committees are greatly concerned on account of the burden which the new Superannuation Scheme will place on the Education (Scotland) Fund, and at a meeting held in Edinburgh a deputation was ap-

pointed to urge upon the Treasury the necessity for providing increased grants. The Education Fund is dependent to a large extent on the "whisky money," and the increase of temperance has reduced the amount of this at the very time when increasing demands are made upon it.

IRELAND.

The vacancy left in the first Senate of the National University by the death of Dr. S. H. Butcher, has been filled by the appointment of Mr. Matthew J. Bourke, K.C., Recorder of Cork.

The governing body of University College, Dublin, has decided to proceed with the erection of their new buildings. The site will comprise the site of the late Royal University in Earlsfort Terrace, that of University College in St. Stephen's Green, and the site, situated between the two former, recently presented by Viscount Iveagh. The offices of the National University have, in the meantime, been transferred from Earlsfort Terrace to Merrion Square.

The question raised last summer by the application of two Women's Colleges in Dublin for recognition of their lectures by the University, was postponed by the Senate at their October session till they should get legal opinion on the point. In consequence of this opinion, it is stated that the application has been withdrawn.

The *alumni* of the late Royal University and the public generally have learnt, with regret, of the death of Sir James Creed Meredith, former Secretary of the Royal University, on the 23rd ult. Sir James, who was a graduate of Trinity College and a member of the Irish Bar, was connected with the Royal University during the thirty years of its existence, and the successful working of that institution was very largely due to his ability, tact, and indefatigable industry. His activities were by no means confined to it; he was a prominent member of the Masonic Order, and, as Honorary Secretary to the General Synod, he rendered valuable service to the Church of Ireland during many years, his legal knowledge and talent for finance being exceedingly useful in that capacity.

The case of the Irish secondary teachers is at last likely to receive attention. Mr. Birrell has given definite promise of aid from the State, and Mr. John Dillon, M.P., is taking a practical interest in the matter of pensions for secondary teachers. In a letter which

appeared in the Press early in the month, he suggests, as a model for a State-aided scheme, one which has been adopted and is shortly to come into operation in the Royal Academical Institute, Belfast. This scheme, which is a pioneer attempt in Ireland to deal with the question, is roughly as follows:—The governors of the school, out of its general funds, will set aside each year a sum equal to 5 per cent. of the total "normal salaries" of the officers of the school as a "Superannuation Fund," until a capital sum has accumulated, the interest on which shall be equal to 5 per cent. on the "normal salaries." At the end of each term a sum equal to 5 per cent. on the salary of each officer of the school shall be paid to an insurance company on his behalf, the officer himself contributing an equal amount, to secure him a superannuation allowance on his reaching the age of sixty. Two policies will be taken out for each officer—one, the premiums for which are paid by the governors, to revert to the Superannuation Fund in case of his resignation, retirement, or death before the age of sixty (exceptions being made for the case of retirement through permanent incapacity or for a widow or children in the event of his death); the other, representing his own contributions, to revert unconditionally to him or his representatives. Mr. Dillon suggests that State aid might come in, either in helping to start a Superannuation Fund in schools less amply endowed than the Royal Academical Institute, or in contributing towards the premiums payable by teachers whose salaries are of a low standard.

Meantime, the secondary teachers themselves are alive to their own interests. Two meetings have been recently held in Dublin, at Alexandra College, and at the Dominican College, Eccles Street, and a Provisional Committee appointed for the purpose of organizing an Association of Secondary Assistant Mistresses as a branch of the already existing Association of Secondary Teachers. One of the objects set forward by the Association of Secondary Teachers is the securing of registration. Desirable as this would undoubtedly be, there is one grave obstacle to it in Ireland; the fact that a large number—perhaps two-thirds—of the secondary teachers of the country belong to religious orders, who have their own system and standards of training (in many cases a high one) and would, in all probability object to State registration of their members.

The Commissioners of National Education have made the follow-

EDUCATIONAL CATALOGUE SENT POST FREE

CASELL & CO., LTD., La Belle Sauvage, London, E.C.

Primary Education.

ing appointments:—Mr. E. S. Cromie, B.A., and Mr. J. H. Tibbs, B.A., District Inspectors, to be Senior Inspectors; Mr. G. Nicholls, M.A., Mr. F. Beamish, and Mr. W. Dunlop, M.A., to be Junior Inspectors; Miss Grace Austin to be Head Organizer of Kindergarten.

The question of Medical Inspection of Primary Schools still continues to the front, and a meeting, at which the Provost of Trinity presided, was held in Dublin on January 19 to deal with the question. Dr. Oliver Gogarty gave an address and was followed by other medical men. The Provost, speaking as one of the Commissioners of National Education, said that the Board was keenly interested in the matter, but all their attempts at improvement were blocked by want of funds, no grants for the purpose being procurable. The Board (largely through his initiative) had passed a regulation by which young children might be allowed home about 12 for an early dinner. (It may be remarked in passing that, unless this regulation be extended to pupils of all ages, it is scarcely likely to be of use, as few poor families can easily arrange two dinners for the children.) Dr. Traill described an arrangement in two large schools under his personal care in the North, by which the children were fed during the winter months, the parents contributing twopence per week for each; where the parents were unable to pay they were not asked to do so, but the children did not know who paid and who did not, the danger of pauperization being thus obviated.

[Schools are unavoidably held over.]

PRIZE COMPETITIONS.

The winner of the Translation Prize for December is Miss Marion Little, St. Winifred's, Eastbourne.

Four Prizes of Half a Guinea are awarded to "Amadan" (Victor Hugo), "Foursome" (Goethe), "C.R.H." (Meleager), "Passaro" (Hymn-book Inscription).

ECRIT AU BAS D'UN CRUCIFIX.

Vous qui pleurez, venez à ce Dieu, car il pleure.
Vous qui souffrez, venez à lui, car il guérit.
Vous qui tremblez, venez à lui, car il sourit.
Vous qui passez, venez à lui, car il demeure.

—VICTOR HUGO.

INSCRIPTION FOR A CRUCIFIX.

By "AMADAN."

Mourners, kneel, He too hath sorrows;
Sufferers, come, He heals your pains;
Tremblers, look, He smiles upon you;
Travellers, stay, for God remains.

By "VERNICE."

O ye that weep, a God who weeps is here;
To Him draw near.
O ye that suffer, come to Him and kneel;
His word can heal.
O trembling souls, come unto Him for ease;
His smile is peace.
O ye that look and pass, pause at His side;
He doth abide.

By the PRIZE EDITOR.

Come, ye who weep, He weeps, too, this Man God;
Come sufferers, He suffered and He cures;
Come, ye who quail, He smiles beneath the rod;
Come homeless wayfarers, for He endures.

Wär' nicht das Auge sonnenhaft,
Wie könnten wir das Licht erblicken?
Lebt' nicht in uns des Gottes eigne Kraft,
Wie könnte uns das göttliche entzücken?

—GOETHE.

Toû γὰρ γένος ἑσμεν.

By "FOURSOME."

Were not the eye endowed with light,
No sun above for us could shine.
Had man no share in God's own might,
What could he know of the Divine?

By "AMADAN."

The eye's own light
Makes light to shine.
What gives man light?
The light divine.

(Continued on page 130.)

GIRLS' SCHOOL TRANSFERS.

Messrs. GABBITAS, THRING & Co.,
36 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

**TRANSFERS OF AND PARTNERSHIPS
IN GIRLS' SCHOOLS.**

Messrs. GABBITAS, THRING & Co. have a large number of Girls' Schools on the books of their Transfer Department, but issue no list of such Schools. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her.

The following are a few of the Schools now on their books:—

No. **TRANSFER** of or **PARTNERSHIP** 4,936. in old-established and successful Boarding and Day School with Boys' Preparatory Class and Kindergarten, in a suburb of a North-Western City, containing about 10 Boarders and 30 Day Pupils. Prospectus fees 39 to 45 guineas and 12 to 15 guineas. Gross income about £800, and profits about £300. Goodwill £400. Premises would be let. Furniture at a valuation.

No. **TRANSFER** of flourishing Preparatory 4,925. School for Girls and Boys, with Kindergarten, in a good residential suburb, containing about 30 Pupils, all at present under 13 years of age, at fees of 6 to 9 guineas per annum. Gross receipts just over £300.

No. **PARTNERSHIP** in Boarding and Day 4,906. School for Gentlemen's Daughters and small Boys in a residential locality near London, containing 3 Boarders and 50 Day Pupils. Fees 50 to

GIRLS' SCHOOL TRANSFERS.

80 guineas and 9 to 15 guineas. Gross receipts over £1,000 and net profit £200. Goodwill of one-third share £150, unless Partner can introduce Boarders.

No. **TRANSFER** of old-established, flourishing 4,890. School at a South Coast Health Resort, containing about 50 Boarders, at prospectus fees of 60 to 75 guineas, and most of them paying quite full fees. Gross receipts for last year about £3,000, being an increase on the average of last three years. Fees for current year indicate further increase. Goodwill £2,500.

No. **TRANSFER** of old-established Preparatory 4,887. School for Boys, under a lady, situated at South Coast Health Resort. Principal wishes to retire on account of advancing age. Wide and long-established English and Anglo-Indian connexion.

No. **PARTNERSHIP**, with a view to **succession**, 4,880. in flourishing Boarding School at a favourite South Coast Resort, full with over 30 Boarders. Day Pupils not received. Prospectus fees of 90 guineas. Gross receipts about £4,600 last year. Average annual receipts of last three years about £3,800. Net profits about £800 and £700 respectively. Goodwill of half share £1,000.

No. **TRANSFER** of or **PARTNERSHIP** 4,877. to **succession**, in excellent Boarding and Day School for gentlemen's daughters, at a residential locality close to a Scottish City. About 25 Boarders; prospectus fees 84 to 96 guineas; 10 Day Pupils and Day Boarders at prospectus fees of 6 to 33 guineas. Gross receipts over £2,000, and net profits £700 or more. Terms dependent largely on suitability of proposed partner or purchaser.

No. **TRANSFER** of Boarding and Day 4,868. School for Girls. Good residential and service centre near London. 10 or 12 Boarders and nearly 40 Day Pupils. Fees 33 to 39 guineas and 4 to 12 guineas. Average gross receipts over £1,200 for last three years. Goodwill £250.

No. **TRANSFER** of Boarding House in 4,867. connexion with one of the Ladies' Colleges in Ireland, containing 12 or 14 Boarders, the majority permanent residents. Owner giving up for private reasons. Will transfer for £400 for Goodwill, Furniture, and Fixtures. Gross income of £700 to £800 could probably be secured.

GIRLS' SCHOOL TRANSFERS.

No. **TRANSFER** or **PARTNERSHIP**, 4,863. with a **view to succession**, of first-rate School in a healthy residential locality near London, containing from 30 to 40 Boarders. Prospectus fees 90 to 120 guineas. Some Day Pupils. Gross receipts averaging about £6,300 per annum.

No. **TRANSFER** or **PARTNERSHIP** 4,838. to **succession**. Flourishing Day Connexion in good residential locality near London. Nearly 40 Day Pupils and Day Boarders, the former at prospectus fees of 15 to 24 guineas. Owner removing with Boarders. School has grown rapidly, and is still increasing.

No. **PARTNERSHIP**, with a view to **Succession**, 4,837. in successful Finishing School of the highest class on the Continent. Prospectus fees 120 guineas. Gross receipts about £5,000, and net profits about £1,000. Part of purchase money to be paid down, remainder by instalments.

No. **TRANSFER** of Boarding and Day 4,821. School, with Kindergarten at a favourite East Coast resort. 6 Boarders and 12 Day Pupils, paying on the average £42 and £9 per annum, without extras. Receipts about £350. Goodwill £100 or capitation fees.

No. **TRANSFER** of very successful Boarding 4,818. School for the Daughters of Gentlemen, at a healthy Educational Centre on the Continent. School flourishing, practically full with about 30 Boarders, at fees of 90 to 180 guineas according to requirements and whether entire charge is taken. Gross receipts for last year about £3,000, an increase on the average of the previous years. Expenses calculated at £2,120. Goodwill two years' purchase.

No. **TRANSFER** of flourishing Day School 4,671. for Girls, with Preparatory Department for Boys and Kindergarten, in a high-lying Suburb of London, containing over 100 Day Pupils. Prospectus fees from 48 guineas in the Kindergarten to 12 guineas per annum. Gross receipts over £1,100, and net profits over £300. Receipts and profits increasing. Goodwill, £750, or two-thirds capitation fees.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

NOTES ON ANIMAL LIFE.

FOR TEACHERS AND STUDENTS OF NATURE.

By **HOWARD E. WARD,**

*Lecturer on Nature Study to the Cheshire Education Committee;
Author of "Helpful Notes on Nature Study" and
"The 'How' and 'Why' of Gardening."*

Crown 8vo, viii + 382 pp., net 3s. 6d. (Postage 4d. extra).

This book is a companion volume to, and is prepared on the same plan as, the Author's "**Helpful Notes on Nature Study (Plant-Life).**" It is arranged in fifty lessons, each of which provides matter for two or more lessons, according to the age of the pupils and the discretion of the teacher. The subject-matter is on the left-hand page, with additional information for the teacher in corresponding paragraphs on the right-hand page.

Among the subjects dealt with are:—The Rabbit, Fox, Squirrel, Weasel, Otter, Mole, Frog, Toads, Butterflies, Bees, Ants, Dragon Flies, Snails and Slugs, Beetles, Bot-flies, &c.

The book contains a very complete **Glossarial Index**, in which the **pronunciation** of every **Scientific Name** is given.

Paton's List of Schools and Tutors,

PUBLISHED ANNUALLY, is an Efficient Aid to
Parents in the Selection of Schools.

*The following appeared in "The Journal of
Education" for October, 1911:—*

PATON'S LIST OF SCHOOLS AND TUTORS,
1911-12. (2s. J. & J. Paton.)

The fourteenth annual edition runs to over eleven hundred pages. Photographs of leading educationists in the Dominions and Colonies is a new feature. There have been so many bogus agencies, some of whose doings we have helped to expose, that we welcome all the more the growing prosperity of a firm against whom we have heard no complaints and frequent commendation.

J. & J. PATON,

Educational Agents,

143 CANNON STREET, LONDON, E.C.

By the PRIZE EDITOR.

Were there no light within the eye,
No sun for us in heaven would shine;
Nor could man know divinity,
Unless he were himself divine.

Οὐκ ἔθανες, Πρώτη, μετέβης δ' ἐς ἀμείνονα χώρον,
καὶ ναίεις μακάρων νήσους θαλίῃ ἐνι πολλῇ,
ἐνθα κατ' Ἠλυσίων πεδίων σκιρτῶσα γέγηθας
ἄνθεσιν ἐν μαλακοῖσι, κακῶν ἔκτοσθεν ἀπάντων·
οὐ χειμῶν λυπεῖ σ', οὐ καὺμ' οὐ νοῦσος ἐνοχλεῖ,
οὐ πεινῆς, οὐ δίψος ἔχει σ'. ἀλλ' οὐδὲ ποθεινὸς
ἀνθρώπων ἐτι σοι βίος· ζῶεις γὰρ ἀμέμπτως
αὐγαῖς ἐν καθαράσιν Ὀλύμπου πλησίον ὄντος.

—MELEAGER.

TO A CHILD (A FIRST-BORN DAUGHTER).

By "C.R.H."

Proté, thou hast not died, thou hast gone to a better land:
Happy are they that dwell with the blest on that island strand!
There, in Elysian bowers, thou playest the livelong day;
Sorrow and death are departed, and flowers are round thy way.
Winter nor summer is there, and pain of its power is left:
Thirst cannot vex thee, nor hunger, nor is there a longing left
Now for the joys of earth; for under a crystal dome,
Nigh to the gates of Heaven, thy life is as pure as thy home.

By "WOODSTOCK."

Thou hast not died, my Proté, but passed to a happier country,
And thy abode is the isles of the blest, in bountiful plenty,
Where, on Elysian fields, thou sportest, in dances delighting,
Circled by tender flowers, and free from all evils thou livest.
Winter now vexeth thee not, nor heat nor sickness annoyeth,
Neither doth hunger oppress thee, nor thirst, nor yet dost thou
yearn for
Life among mortal men; for now thou blamelessly dwellest
In the pure rays of Olympus, which near thee his summit upraises.

By the PRIZE EDITOR.

Thou art not dead, my Proté, but thy spirit has found rest
In a happier land than Hellas, in the islands of the blest,
Where, mid amaranthine meadows, thy frolic footsteps stray,
Never weary; pain and sorrow have for ever passed away.
Thirst nor hunger can annoy thee, summer heat nor winter snow.
None is sick or fever stricken; there no yearning canst thou know
For our life; thou livest ever in a land of pure delight,
And above thee shines the radiance of Olympus' cloudless height.

MOTTO FOR A HYMN-BOOK.

Non vox, vota vocent, non musica chordula, sed cor;
Non clamans, sed amans, cantat in aure Dei.

By "FOURSOME."

Lift up your hearts as well as voices,
In will, not skill, our God rejoices;
The prayer of love has notes more clear
Than praises loud to reach His ear.

By "C.R.H."

With choice not voice, with soul's accord, not music's chord
Our praise should be,
For hearts that love, not lips that move, can win above,
O God, to thee.

By "PASSARO."

Not voice alone
But vows upraise,
Not harp-string's tone
But heart of praise.
Not clamorous noise
God's ear approves,
But still small voice
Of one that loves.

By PRIZE EDITOR.

Let vows with voices, heart with harp-strings blend.
Breathed low, not loud, Love's lauds to God ascend.
(Continued on page 132.)

Memories of a School Inspector

Thirty-five Years in Lancashire and Suffolk.

BY

A. J. SWINBURNE,

Formerly H.M.I. of Schools.

Sir JAMES YOXALL writing in *The Schoolmaster* says: "If anybody wishes to get for 2s. 10d. two pound ten's worth of fun and interest concerning school inspections and inspectors, let him obtain (the above). Every comic and all but impossible thing seems to have happened to Mr. Swinburne or his acquaintances, and he remembers it all—I could quote from this book all day."

A Prize of Two Guineas is offered for the best translation of the following extract from Victor Hugo :—

Rue Saint-Florentin, il y a un palais et un égout.

Le palais, qui est d'une noble riche et morne architecture, s'est appelé longtemps : *Hôtel de l'Infantado* ; aujourd'hui on lit sur le fronton de sa porte principale : *Hôtel Talleyrand*. Pendant les quarante ans qu'il a habité cette rue, l'hôte dernier de ce palais n'a peut-être jamais laissé tomber son regard sur cet égout.

C'était un personnage étrange, redouté et considérable ; il s'appelait Charles-Maurice de Périgord ; il était noble comme Machiavel, prêtre comme Gondi, défrôqué comme Fouché, spirituel comme Voltaire et boiteux comme le diable. On pourrait dire que tout en lui boitait comme lui ; la noblesse qu'il avait faite servante de la république, la prêtrise qu'il avait traînée au Champ de Mars, puis jetée au ruisseau, le mariage qu'il avait rompu par vingt scandales et par une séparation volontaire, l'esprit qu'il déshonorait par la bassesse.

Cet homme avait pourtant la grandeur ; les splendeurs des deux régimes se confondaient en lui ; il était prince de Vaux, royaume de France, et prince de l'empire français.

Pendant trente ans, du fond de son palais, du fond de sa pensée, il avait à peu près mené l'Europe. Il s'était laissé tutoyer par la révolution et lui avait souri, ironiquement, il est vrai ; mais elle ne s'en était pas aperçue. Il avait approché, connu, observé, pénétré, remué, retourné, approfondi, raillé, fécondé tous les hommes de son temps, toutes les idées de son siècle, et il y avait eu dans sa vie des minutes où, tenant en sa main les quatre ou cinq fils formidables qui faisaient mouvoir l'univers civilisé, il avait pour pantin Napoléon I^{er}, empereur des Français, roi d'Italie, protecteur de la confédération du Rhin, médiateur de la confédération suisse. Voilà à quoi jouait cet homme.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by February 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

No charge is made to purchasers.

BLACKIE & SON'S LIST

Just Issued.

THE GROUNDWORK OF BRITISH HISTORY.

BY

GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c.

AND

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and full Index.

764 pp., super-crown 8vo, 6s. Also in Two Parts, 3s. 6d. each.

An English History for Middle and Upper Forms, adapted to the methods of modern teaching of the subject, has long been called for. Mr. Townsend Warner's "Brief Survey of British History" has been found well suited to the needs of Lower Forms, and it is hoped that the present work will prove equally serviceable for Middle and Upper Forms.

The subject is treated with the breadth that is now required of senior candidates for University Local and similar examinations, and in full consonance with the views repeatedly put forward in the circulars of the Historical Association; though, be it said, the work has in no way been suggested by these circulars, but is the outcome of the experience of its joint authors, Mr. Warner of Harrow and Mr. Marten of Eton.

A NEW ENGLISH COURSE ON MODERN LINES.

A FIRST ENGLISH COURSE.

By **FRANK JONES, B.A.**, Assistant Master, King Edward's School, Aston, Birmingham; Lecturer in English at the Birmingham and Midland Institute; Joint Author of Scott and Jones's "Latin Course."

Crown 8vo, cloth, price **2s. 6d.**

THE PLAIN-TEXT SHAKESPEARE.

THE GREATER PLAYS. TEXT ONLY. NO NOTES. Strongly bound in cloth. Price **4d.** each.

A New Edition of the greater Plays of Shakespeare, presented in a serviceable form, at a cheap price. The text follows the well-known **Junior School Shakespeare**, which omits everything that might be thought undesirable in class reading.

The Merchant of Venice.
Julius Caesar.
As You Like It.
King Henry V.

Coriolanus.
King Richard II.
King Richard III.
The Tempest.

Twelfth Night.
Hamlet.
King Henry VIII.
King John.

Macbeth.
King Lear.
Midsummer Night's Dream.

The above Plays may also be had in the **Junior School Shakespeare**, with Notes, price **8d.** or **10d.** each.

THE PLAIN-TEXT POETS.

WITH INTRODUCTION AND FRONTISPIECE. A new series in which each volume contains a representative work, or selection from the work of one of the poets, with an Introduction by a teacher of experience and position, but without further notes. **Limp cloth, price 6d. each.**

A BOOK OF SCOTTISH BALLADS. Introduction by ROBERT STEWART, M.A., Langholm Academy.

POEMS OF THOMAS GRAY. Introduction by Rev. W. C. EPSTEIN, D.D., Head Master of Reading School.

GOLDSMITH'S POEMS. Introduction by Miss E. MARGERY FOX, English Mistress, Clapham High School.

MILTON'S SHORTER POEMS. Introduction by Miss SELLON, Senior English Mistress, Francis Holland High School, Baker Street, N.W.

TENNYSON'S EARLIER POEMS. Introduction by Rev. H. BUCHANAN RILEY, M.A., Head Master of Emanuel School, Wandsworth Common, S.W.

LONGFELLOW'S EVANGELINE, and other Poems. Introduction by Miss CLAY, B.A., Head Mistress of the Queen's School, Chester.

LONGFELLOW'S HIAWATHA. Introduction by Miss AMY F. EDWARDS, Senior English Mistress, Colston's Girls' School, Bristol.

MACAULAY'S LAYS, &c. Introduction by Miss W. L. M. HUTCHINSON, late Fellow of Newnham College, Cambridge.

SCOTT'S MARMION. Introduction by R. F. CHOLMELEY, M.A., Head Master of Owens School, Manchester.

SCOTT'S LADY OF THE LAKE. Introduction by J. V. SAUNDERS, M.A., Senior Master of Hymers College, Hull.

SCOTT'S LAY OF THE LAST MINSTREL. Introduction by Miss A. B. COVERTON, English Mistress at the Ladies' College, Cheltenham.

TENNYSON'S PRINCESS. Introduction by J. HUBERT JAGGER, M.A., Senior English Master, Royal High School, Edinburgh.

*Just added—***BROWNING'S SHORTER POEMS.** With Introduction by EDITH B. FRY, M.A.

 **Prospectuses giving full particulars of above books will be sent post free on application.**

**BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.

Conference Supplement to THE JOURNAL OF EDUCATION.

No. 511.

FEBRUARY 1, 1912.

Cambridge University Press

A Shorter Geometry. By C. GODFREY, M.V.O., M.A., and A. W. SIDMONS, M.A. Crown 8vo. 2s 6d. Or in four parts: Part I, 1s; Parts II, III, IV, 10d each.

The first 74 pages of this book, namely stages 1 and 2, are identical with the *Geometry for Beginners* by the same authors. The plan of the book is as follows:

First Stage.—Introductory practical work concerned with the fundamental concepts, and not primarily designed to give facility in using instruments.

Second Stage.—Discovery of the fundamental facts of geometry, by experiment and intuition, including the facts relating to angles at a point, parallels, angles of a triangle and polygon, congruent triangles.

Third Stage.—Deductive development of the propositions subsequent to those dealt with by experiment and intuition in the second stage.

The division of the geometry course into these three stages is in accordance with the recommendations of the Board of Education (the Teaching of Geometry and Graphic Algebra, Circular 711, March 1909).

Solutions of the Exercises in Godfrey and Siddons's *Solid Geometry*. By C. L. BEAVEN, M.A. Crown 8vo. 5s net.

Theory of Groups of Finite Order. By W. BURNSIDE, M.A., F.R.S., LL.D. With a Plate. Second Edition. Demy 8vo. 15s net.

Very considerable advances in the theory of groups of finite order have been made since the appearance of the first edition of this book, and there is accordingly in the present edition a large amount of new matter. Five chapters are devoted to the theory of groups of linear substitutions, including their invariants, and certain properties of abstract groups, to which no reference was made in the first edition, are also dealt with.

A Treatise on Plane Trigonometry: Third Edition. By E. W. HOBSON, Sc.D., LL.D., F.R.S. Demy 8vo. 12s.

The author has taken the opportunity afforded by the need for a new edition to subject the whole work to a careful revision and to introduce a considerable amount of new matter. He has inserted in the first chapter a theory of the lengths of circular arcs, and of the areas of circular sectors, based upon arithmetic definitions of their measures, and much of that part of the work which deals with Analytical Trigonometry has been re-written.

The Theory of Experimental Electricity: Second Edition. By W. C. D. WHETHAM, M.A., F.R.S. Demy 8vo. 8s net.

"An elementary text-book should give a comprehensive survey of the whole of its subject in such a way as to stimulate the curiosity and imagination of the student, and this the book before us does. It is written in a clear and simple style. . . . Books such as Mr. Whetham's should be read not only by the student who wishes to enrol himself in the scientific camp, but also by those who intend to become engineers."—*Nature*

The Mathematical Theory of Electricity and Magnetism. By J. H. JEANS, M.A., F.R.S. Second edition. Royal 8vo. 15s net.

In the new edition now published the chapter on Electromagnetic Theory of Light has been largely re-written and considerably amplified, and two new chapters appear on the Motion of Electrons and on the General Equations of the Electromagnetic Field.

Outlines of the Theory of Electromagnetism. A series of lectures delivered before the Calcutta University by GILBERT T. WALKER, M.A., Sc.D., F.R.S. Demy 8vo. 3s net.

The seven chapters into which the book is divided deal respectively with Vector Analysis, Applications of Vectorial methods to Magnetostatics, The Theory of Maxwell as expressed by Hertz, Hertz's Equations for Moving Media, Some Effects due to the Motion of Charged Particles through a Stationary Aether, The Electron Theory of Lorentz applied to Stationary Media, and The Electron Theory of Lorentz applied to Moving Media.

English Composition: with Chapters on Précis Writing, Prosody, and Style. By W. MURISON, M.A. Crown 8vo. 4s 6d. Or in two parts, 2s 6d each:—

Part I.—Uses of Words, Figures of Speech, Sentence and Paragraph Construction, Punctuation.

Part II.—Essay, Paraphrase, Précis, Style, Prosody, Kinds of Literature.

"Mr. Murison's book is the outcome of his wide teaching experience. It is one of the soundest books on the subject we have seen for a long time. The arrangement is a model of clearness and comprehensive-ness. . . . It is a great pleasure to be able to recommend a book on English composition so unreservedly."—*School World*

Nineteenth Century Essays. Edited, with introduction and notes, by GEORGE SAMPSON. Extra fcap 8vo. 2s.

Contents:—Carlyle, *On History*; Macaulay, *Rankine's History of the Popes*; Bachelot, *Shakespeare: the Man*—Newman, *Literature*—Ruskin, *Sir Joshua and Holbein*—Arnold, *Marcus Aurelius*—Stevenson, *A Penny Platin and Twopence Coloured*.

The Lay of the Nibelung Men. Translated from the old German text by ARTHUR S. WAY, D.Lit. Paper boards, parchment back. Fcap. 4to. 10s 6d net.

"Mr. Way's translation of the Nibelungenlied is worthy of his high reputation. He has adopted the anapaestic-iambic measure of Morris's *Story of Sigurd*, with very happy results in swiftness, force, and variety of cadence. . . . It is good to have this admirable rendering of a noble classic."—*Daily News*

The Aristoxenian Theory of Musical Rhythm. By C. F. ARDY WILLIAMS, M.A., Mus. Bac. Royal 8vo. 12s 6d net.

"Mr. Ardy Williams's learned exposition of the Aristoxenian doctrine is an important contribution to the history of musical rhythm in ancient and modern times, and contains valuable matter on the subject of Greek music in general."—*Times*

The Cambridge County Geographies. A Series of County Geographies suitable for general use as handbooks to the various counties, and also intended for use in Schools. Crown 8vo. 1s 6d per volume.

The latest additions to this series are:—

Buckinghamshire. By A. MORLEY DAVIES, D.Sc., F.G.S.

Midlothian. By ALFRED McCALLUM, M.A., LL.B.

Northamptonshire. By M. W. BROWN, M.A.

East London. By G. F. BOSWORTH, F.G.S.

West London. By G. F. BOSWORTH (nearly ready).

Each volume gives an account of the history, antiquities, architecture, natural history, industries, and physical, geographical, and general characteristics of the County, and each has two Coloured Maps, one physical and the other geological, and a large number of illustrations. A list of the volumes previously published will be sent on application.

The Progress of Physics during 33 years, 1875-1908. Four lectures delivered to the University of Calcutta during March, 1908, by ARTHUR SCHUSTER, F.R.S., Ph.D., Sc.D., D.Sc., D.ès Sc. Demy 8vo. 3s 6d net.

"There are many discoveries in the period covered by Dr. Schuster which physicists will do well to ponder over, and in a space of equal compass it would be hard to find a more comprehensive picture of our knowledge regarding matter, ether, and electricity than that which he has given us."—*Manchester Courier*

Some Problems of Geodynamics. By A. E. H. LOVE, M.A., D.Sc., F.R.S. Royal 8vo. 12s net.

This book is divided into eleven chapters which deal respectively with:—The Distribution of Land and Water, The Problem of the Isostatic Support of the Continents, The Problem of the Isostatic Support of the Mountains, General Theory of Earth Tides, Effect of Inertia on Earth Tides, Effect of the Spheroidal Figure of the Earth on Earth Tides, General Theory of a Gravitating Compressible Planet, Effect of Compressibility on Earth Tides, The Problem of Gravitational Instability, Vibrations of a Gravitating Compressible Planet, and Theory of the Propagation of Seismic Waves.

London, Fetter Lane: CAMBRIDGE UNIVERSITY PRESS: C. F. Clay, Manager.

METHUEN'S NEW BOOKS.

A FIRST YEAR PHYSICAL CHEMISTRY.

By T. P. HILDITCH, D.Sc. Lond., F.I.C. Crown 8vo, 2s.
[Text-books of Science.]

An attempt to render this branch of chemistry more easy to those commencing its study. The more elementary outlines of the subject are treated, as far as possible, from the standpoint of practical use in solving chemical problems; accordingly, the first part of the book is devoted to characteristic properties, such as density or refractivity. Later chapters include introductions to the physico-chemical theories of gases and of solutions, and the more important applications of these theories to pure chemistry. The book should prove useful to Inter. B.Sc. and Final (Pass) B.Sc. candidates, as well as those taking Board of Education examinations.

PHYSICO-CHEMICAL CALCULATIONS.

By JOSEPH KNOX, D.Sc., Lecturer on Inorganic Chemistry, Aberdeen University. Cr. 8vo, 2s. 6d. [Text-books of Science.]

This book is intended for students of physical chemistry, as a supplement to the theoretical matter of lectures and text-books. Here the theory is applied to the solution of practical problems. The book contains eleven chapters, dealing with the main sub-divisions of physical chemistry. Each chapter consists of a short introduction dealing with the theory required for the solution of the problems, a series of typical problems with complete solutions, and a list of problems for solution with answers. Practically all the problems have been taken from the original literature of the subject, and by a careful study of the solved problems the student should learn much. The large collection of problems for solution should prove useful to teachers.

A TEXT-BOOK OF PRACTICAL CHEMISTRY FOR TECHNICAL INSTITUTES.

By A. E. DUNSTAN, D.Sc., and F. B. T. THOLE, B.Sc.,
Lecturer in Organic Chemistry, East Ham Technical College.
Crown 8vo, 3s. 6d. [Text-books of Science.]

A TEXT-BOOK OF INORGANIC CHEMISTRY.

By G. SENTER, D.Sc., Ph.D., Lecturer at St. Mary's Hospital Medical School. Author of "Outlines of Physical Chemistry."
With many Diagrams. Cr. 8vo, 6s. 6d. [Text-books of Science.]

AN ENGLISH CHURCH HISTORY FOR CHILDREN.

By MARY E. SHIPLEY. With a Preface by WILLIAM E. COLLINS, D.D., late Bishop of Gibraltar. In Three Volumes.
With Maps and Illustrations. Crown 8vo, 2s. 6d. net each.
Vol. III, A.D. 1500-1911, *Now Ready*.

TECHNICAL ARITHMETIC AND GEOMETRY.

By C. T. MILLIS, M.I.M.E., Principal of the Borough Polytechnic Institute. Second and Revised Edition. Cr. 8vo, 3s. 6d.

An up-to-date course in Arithmetic, Geometry, and Mensuration.

ENGLISH COMPOSITION.

By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 1s. 6d.

This work is intended for pupils of Secondary Schools and private students. It supplies a progressive course in English composition, embracing not only essays and letters, but also other important and useful work in writing English. Numerous and varied exercises are appended to each chapter, while questions and shorter exercises, many of which may be used orally, are introduced in the text. The importance of connecting the student's composition with his reading has been borne in mind throughout.

ENGLISH COMPOSITION FROM MODELS.

By C. ROONEY, B.A., LL.B. Crown 8vo, 2s. 6d.

This book is an attempt to apply the Direct Method to the teaching of English composition. The models range from Bacon to Stevenson, and the extracts, which have been carefully selected, are calculated to interest senior students. Emphasis is laid on the fact that to write we must read, and that to read with profit we must be interested. "All literary skill is based upon imitation." The book deals in an interesting way with certain inherent difficulties, and has useful hints as to how the literary taste of young people may be developed and guided. It is the work of a practical teacher.

DOUBLE ENTRY BOOK-KEEPING.

A Complete Treatise on its Theory and Practice. By JAMES CUSACK, LL.D., Principal of the Business Training College, Finsbury Square. Crown 8vo, 3s. 6d.

Covers the requirements for all the Elementary, Junior, and Intermediate Examinations held by the London Chamber of Commerce, the Royal Society of Arts, the National Union of Teachers, the Oxford and Cambridge Senior Locals, the College of Preceptors, and other similar Examinations.

THE ASSOCIATION OF HEAD MASTERS.

THE twenty-first Annual General Meeting of the Incorporated Association of Head Masters was held at the Guildhall, on January 10 and 11. After the official reception of the Lord Mayor, Dr. H. J. SPENSER, Head Master of the University College School, delivered his Presidential Address.

The Organization of Secondary Education.

All of them must be conscious that the time had come when the nation could no longer afford to shirk the task put to it by Matthew Arnold, in 1867, the organization of secondary education. To-day the whole business confronted them, grim, formidable, bristling with difficulties, largely attributable to their own neglect in bygone years. They were awaiting, not without apprehension, reform from without. Towards the unification of the profession substantial advance during the past year had been made on three converging lines—training, registration, pensions. What might be the ultimate outcome of the Council in Council establishing a common register no man could foresee, but for the present they hailed it as the capture of the first work. In the interval before the promised Teachers' Council could come into existence, they had before them the task already accomplished by their colleagues of the primary schools. Before they could make common cause with the other branches of the profession they must make common cause with each other. The next of a head master to settle things internal should be incontrovertible. The limit of useful external control was admirably defined in the Board of Education Report for 1905-6 as "the point at which it ceases to be an expanding and stimulating force, and tends to fetter or stultify." It was because they had never yet ascertained the greatest common measure of their knowledge and agreement that secondary education had afforded such a happy hunting ground for the crank, the faddist, and the charlatan. In the modern educational drama the most familiar person, *persona ingratisissima* to the schoolmasters, was the "distinguished educationist." Was there any other faculty or profession which tolerated the intrusion and the dictation of the amateur expert?

Quod medicorum est

Promittunt medici: tractant fabrilis fabri;

Scribimus indocti doctique poemata passim.

Still, when the oracles were dumb they could hardly complain that false prophets had arisen who led the people astray, and, incidentally, reaped the temple fees. Generally, in this country, the vital issues of education were neglected, or shirked, or treated from the religious or political standpoint, or from any standpoint save that of education. What they needed was a Ministry of Education organized for education and not merely for administration.

Schoolboy Undergraduates.

From the third volume of evidence given before the Royal Commission on University Teaching in London, it was clear that the traditional position of the older Universities, as regards the age of admission, was considered by those who knew more conducive to a high standard of material education than the empirical methods of modern Universities. It was no justification or palliation for the immature undergraduate to plead that otherwise he would not go to the University at all. Of the two alternatives, to stay in the upper form of a public school till eighteen was far better for the youth than to be forced into studies for which he is not ripe by the bribe of a degree at nineteen. It was deplorable to hear that, but for the Matriculation Examination, the University of London would be bankrupt. The report of the Consultative Committee on School Examinations was highly satisfactory in so far as it recognized the state of Egyptian bondage under which they were at present labouring. Of the three plans of reform suggested he preferred the one recommended by the Committee, but he shared Mr. A. C. Benson's doubt as to its feasibility on account of its magnitude and costliness.

Free Places.

Members had now had sufficient experience of Free Places and scholarship systems to lead them to some conclusion as to the necessity for some modification. They had learnt that the ladder must be widened so as not to lead a few boys to the University, but also to provide for the many preparation for the vocations of industry and of commerce. The ladder must be supplemented by the sieve so as to eliminate the unfit at successive stages. When once the leaders of the Labour party realized that, by an education intended merely to lead to the professions, a large proportion of the free-payers were left stranded and unable to bridge the gulf between unemployment and a wage-earning employment, the defects of the ladder would be remedied and secondary schools be relieved. They would, be hoped, at the same time realize that the attempt to combat social pressure by reducing secondary schools to bankruptcy might be

political heroics, but was bad business. He was sorry to hear Mr. J. L. Paton objecting to the term "ladder." A ladder demanded and stimulated ability to climb. Surely they did not wish to substitute for a ladder a lift!

The Rev. C. J. SMITH (Latymer Upper School, Hammersmith) moved:

"That, in the opinion of this Association, the time has now come when all private and proprietary schools and other educational institutions should be inspected by the Board of Education."

Inspection was offered free, gratis, but many did not accept it. The preparatory schools to the public schools were thoroughly efficient, but of the dames' schools, from which a large proportion of their pupils came, some were excellent but some were abysmal. Schools could escape inspection so long as they charged more than 9d. a week. There were modern "Do-the-Boys Halls" in existence to-day. Anybody could put up a brass plate and call his house an academy. There was another class of schools which he would call "Do-the-Parents Hall," in which colossal success waited upon impudence. You got yourself photographed beside the archway to affluence. One advertised that well-paid appointments are absolutely assured to those completing this course. You need not publish the name of a single member of the staff. You need not publish any qualification you yourself have for the post of supervisor. All you need do is to promise luscious fruit and charge high fees. You need not build classrooms; any house will do. Having said that they gave individual attention to each pupil, they might, with impunity, publish the photograph of one unfortunate man lecturing a hundred pupils; their own limit of thirty five was nothing. They could pack the children like sardines, and in that sense they would be real cramming establishments. When the children go in for examinations, let the staff occasionally deputize for them. Wise parents would ask for the lavish promises of the advertisement to be made in a legal document and stamped. What a change inspection would bring about. Who could say that inspection had terrors when ninety of the public schools had already been examined and declared efficient, as well as many private schools? Scores of improvements in his school could be traced directly to the visits of Inspectors.

Mr. R. F. CHOUMLEY (Owen's School, Islington) seconded.

Mr. KAYE (Bedford) agreed fully as to the desirability of universal inspection, but doubted whether it could be carried out. He instanced the prospectus of a school which advertised that thirty acres of playing fields were attached to the school. It turned out that this was a public park.

An amendment was moved to allow the inspection to be conducted by the Board of Education or some body approved by the Board. The amendment was, however, defeated by a very large majority. The resolution was then put and carried against very few dissentients, and was referred to the Council for action.

Dr. ALEX HILL, Secretary to the forthcoming Congress of Universities of the Empire, stated that all the fifty-two Universities within the Empire would be represented, and explained the program.—Dr. ROWTON, sometime Music Master in Bradfield College, stated that in his experience there was no difficulty in making music a regular part of the curriculum. He had found most head masters, even the non-musical, eager to promote the study.—Mr. F. W. SAUNDERS (Oundle) urged that any logical treatment of mathematics in schools should be frankly abandoned. Euclid had gone and geometrical propositions should take a very subordinate place. Trigonometry should be started in the lowest forms of the school.—Mr. P. SHAW JEFFREY (Colchester) urged that a larger place should be given to observational science. The least useful part of science teaching in country grammar schools was chemistry. Physics should be taught as a practical branch of mathematics, and he did not see why cookery should not be included under science.—Mr. JENKINS THOMAS (Hackney Downs) drew attention to the early leaving age in secondary schools. Of 84,914 boys in secondary schools, in July 1910, only 6,574 were over sixteen and only 507 over eighteen. It was only in this respect that, in his belief, English secondary schools were superior to those of France and Germany.

The morning session of the second day was devoted to private business. It was announced that a resolution had been carried welcoming the adoption of some scheme whereby success in the War Office Examination for Certificate A might reckon in School-Leaving Examinations.

Teaching of Latin.

Dr. ROUSE read a paper advocating his reformed method of classical teaching. The subject of classics was now being assailed on all sides. It was attacked—ill advisedly from their point of view—by the specialist teachers in other subjects. More formidable foes were those like the gentleman who wrote to the papers signing himself "A Dunce"—men who had passed through the classical mill and had brought away nothing, or thought they had brought nothing away—not quite the same thing. If the classicists in their turn were

asked what they had brought away from the study of algebra or geometry, they might be tempted to make the same answer, but it would not necessarily be true. They must, however, in candour, confess that, at present, not only in the case of dunces but of intelligent men, the result of classical teaching was often small and incommensurate with the time spent. The cause was double. It was partly due to the excessive time devoted to classics, and partly to the wrong methods employed. In the smaller grammar schools and those schools which received a large number of elementary scholars, the study of Latin and Greek was postponed and an examination of the University Entrance Scholarships showed that no bad results had followed from the postponement. In one year as many classical scholarships had been won by pupils from these schools as by pupils coming from the great public schools. Dr. Rouse proceeded to set forth his well known scheme of language teaching—French, Latin, Greek, German, the last two as alternatives, with English taught concurrently all through the course. As to method, the right way was to bring the language into direct contact with the interests and life of the boy. No school subject should be taught so as to produce disgust either in teacher or pupil.

Mr. H. CRADOCK-WATSON (Crosby) doubted whether Dr. Rouse's method of oral teaching would do much for the boy who left school at sixteen. He had given the oral method a fair trial in modern language teaching and still felt very doubtful as to the results. In Latin something more or less distasteful to boys had to be learnt, and he had not much belief in gilding the pill. After all, they had to fall back on the good old rule of making a boy work.

The Rev. R. F. ASHWIN (Brackley) remarked on the difficulty of obtaining masters with sufficient colloquial knowledge of Latin. If they could command an unlimited supply of Dr. Rouses, the Rouse method would be splendid.

Mr. G. H. CLARKE (Acton) found that, under the oral system, a boy could be brought up to the London Matriculation standard in three years, and that boys so taught were far keener to learn than under the old system.

Mr. R. H. ELLIOTT (Rishworth) said that thirty years' experience had convinced him that the faculty of memory was most strongly developed in boys from nine to twelve, and knew nothing that paid better with them than the learning of Latin forms. What they then learnt they never forgot. He dissented from the new doctrine that all learning must be made pleasant. It was a wise saying of Aristotle that all learning was accompanied by pain. As a training for life they must set boys to do something that was not easy and was not pleasant.

The Rev. W. MADELEY (Woodbridge) entered a protest against the doctrine that, in order to be useful, subjects must be made painful. His experience of the Rouse system as practised by Dr. Rouse's imitators was not encouraging. Boys so trained came to him knowing nothing definite at all.

Dr. ROUSE, in reply, said it was no part of his method to substitute interest for effort. Some speakers had confounded two different things—what was pleasant and what was easy. His aim was to make boys wish to attempt difficult things. If the utility of subjects was to be measured by the difficulty, why not take Chinese? The problem was how to make Latin profitable for boys who left school at sixteen. He believed that his method had partly solved it, but if they failed in this, Latin would have to be abandoned altogether as a subject of school instruction.

The Conference closed with the usual votes of thanks to the Court of Common Council, the Lord Mayor, and the Preacher.

MODERN LANGUAGE ASSOCIATION.

AS the Master of University said in his after-dinner speech, the key-note of the Annual Meeting, which was held on January 4 and 5 at Birmingham, was Internationalism. It formed one of the topics of the Presidential address, and a special feature of the gathering was the presence of two delegates, Dr. Gropp and Dr. Karl Schmidt, from the German Committee for the Exchange of Children, who described the work of the Committee and pleaded for more English children for German homes.

On the first day, after Mr. Neville Chamberlain had welcomed the meeting in the name of the University, in whose buildings it was held, the Presidential Address was delivered by Mr. J. L. Paton.

Mr. PATON said that during the last quarter of a century there had been notable signs of improvement in modern language teaching. Pronunciation was no longer a matter of haphazard imitation,

but was taught scientifically and was regarded as the first thing to achieve. Conversation was not a special addendum, but the vehicle of instruction, and if a master could not teach through conversation they had no use for him. Composition was not the laborious reconstruction of an English original, but a means of self-expression, primarily oral, later on written, always, except in the highest stage, free. The reading-book was no longer choked by shoals of annotations, but allowed to speak for itself. These reforms would not have been possible without the help of the Association, which had done well to keep its attention centred on teaching and leave such matters as administration, salaries, and external conditions to other societies, to whose elbow, at the same time, he wished more power. That was the right policy. Let the teacher be worthy of his hire, and before long the hire will be worthy of the teacher. The classics owed much to the modern language reform movement. They could not quicken one part of our educational system without, at the same time, sending a quickening thrill through all the rest. The discovery was being made that Latin and Greek were not dead languages. Classical teachers might not catch up modern language teachers, but they were on the same track. There were many differences of opinion, but these need not hinder their effectiveness in working for a common aim. Let them keep their eyes fixed on the big things, and small obstacles would appear no longer insuperable. The first aim of the future must be high academic qualifications for the modern language teacher. He must be as much a "scholar" as any master on the staff. To attain this end a more intimate connexion between the modern side and the University was needed. Mr. H. C. Devine, of the Future Career Association, had prepared for him some tables showing the number and value of scholarships given for modern languages at Oxford and Cambridge. From this it appeared that, during the academic year 1910-11, there were awarded at Cambridge one scholarship and one exhibition for German, two close scholarships for modern languages, and two scholarships and six exhibitions for classics, history and French combined, while at Oxford four scholarships of £50 each were given for modern languages. But, as the Master of Gonville and Caius had pointed out, the fault did not lie altogether with the Universities, and he did not wish to blame them. Candidates were lacking as well as scholarships. What was wanted was to open up the Universities to the modern-side boy. He hoped Oxford and Cambridge would soon pay some attention to domestic matters. Frederick Temple, in the forties, calculated that Balliol could be run for £40 a man per annum. Why is it still four times as much to-day? This affected modern-side boys more than classical boys because they were usually poorer. He would pass on to another of their aims, the furtherance of mutual understanding and concord amongst the peoples. If, like the Tibetans, they believed they could get rid of disagreeable things by writing their names on slips of paper and throwing them into a bonfire, they would all agree in writing down first the word "war." Last summer the grim terror of a European war had overshadowed them. That such a war should be possible was a black blot on their boasted civilization. That it should never again be possible must be the fixed purpose of every individual and every association of individuals which cares for the progress of the race. Such, he believed, was the fixed purpose of Omnipotence. And amongst the tools with which Omnipotence carried out "its deep designs of never failing skill," next to the work of the Christian churches he placed the work of the modern language teachers of this and other countries. Racial friction was due to racial ignorance. Peace was only possible between those who understand one another, and folk cannot understand one another unless they know one another's language. Internationalism was to be the note of the future, just as nationalism had been of the past, hundred years. What we need, as Lord Haldane put it, is "education in mutual understanding." It was these considerations which made the rapid decline of German teaching in our schools so serious a matter. If it went on unchecked it would be nothing short of disastrous. Travel was of great value, but only on the condition that the travellers could talk with the natives of the country. But travel, they would say, was expensive. No doubt, if people went to hotels, but there were ways in which boys and girls could travel without making use of hotels. First, there was the exchange of children between English and Continental families; next, there were the journeys of the German *Wandervogel*. They had been imitating these in a small way in Manchester. For the last three years he had got some of his boys' parents to volunteer a week's hospitality to German boys, who had come over partly through the instrumentality of the Anglo-German Friendship Committee, and partly through that of old student-teachers of his school who were resident in Germany. These invitations had been reciprocated by kind friends on the other side, and had led to the formation of many happy friendships. Then, in 1910, thirty boys carrying light pioneer tents had made a marching expedition to Germany, and last year two of his masters took parties to the Black Forest and North France. The cost of the Black Forest

expedition, to take one example, had been £5 a head and nine hundred miles had been covered. The unvarying and disinterested kindness which they had experienced had brought them into close touch with the people of the country. To assist mutual understanding there was nothing better than such schoolboy expeditions, because the best way to counteract prejudice was to prevent its being born. It was their business as teachers to call in the young to help to solve the greatest of all the problems of our civilization; it was their privilege to fit them for the work, and it was their faith and hope that they did not work in vain.

In the afternoon the question "What command of English should a Child possess before beginning the Study of a Foreign Language?" was discussed.

MISS HART (Sydenham County Secondary School) sent a paper, in which she said that modern language teaching suffered a great deal from the faulty teaching of the mother-tongue in the earliest stages of education. There were three main kinds of difficulty. (1) Many children who come to a secondary school at the age of ten or twelve bring with them the results of an undesirable, because artificial, method; their English is unnatural, more or less ungrammatical, and often devoid of both sound and sense. (2) Children who have had the best social advantages are either painfully silent and shy, "dumb" in the expressive American phrase; or else (3) they are full of spontaneity and of ideas, but are quite unable to give the latter any literary form. She suggested the following scheme for the four years of school life preceding the learning of the first foreign language—that is, roughly, the years six to ten. Even before the age of six a Froebelian training gives practice in free and really self-expression. A phonetic training is indispensable for correcting or preventing bad accents, faulty intonation, local, provincial, and colonial peculiarities, and fashionable affectations in speech. The speech organs must be trained by regular breathing and vocal exercises. But ear-training was of the greatest importance of all. She laid great stress on the use of a phonetic script. Every lesson afforded scope for self-expression and composition, but direct language teaching would be given in the daily story-telling, and recitation or reading lessons. The dramatic instinct could hardly be over-developed in English children; they should live all the episodes and stories that they are learning. Written work would vary from a line or two at the beginning of the first term to a page or two at the end of the first year. The easier spellings should be taught at this stage and some elements of grammar, but the use of grammatical terminology should be avoided. The second year (seven to eight) would see the children ready for a continuous story, and some fairly rapid reading out of school might be indulged in. Story writing might be extended to three or four pages. Practice in letter-writing should be given. The simplest grammatical terms might now be learnt; but the utmost caution should be used against purely formal work in grammar and good *rational* answers insisted on in every analysis. In the next two years the most important step preliminary to the teaching of a foreign language is taken. For physiological reasons it would be desirable to begin French at once, but as this was impracticable in most schools, the next best thing is that modern language teachers should teach the mother-tongue to their future pupils. In addition to the development of the work done at former stages the intensive treatment of selected passages can now be entered upon, such passages being first read aloud and generally understood, next analysed, sentence by sentence, from the point of view of its ideas, tone, language, grammatical and literary construction. Every detail should be made absolutely clear, and directly or indirectly its value as an artistic whole brought home to all. Passages distinguished by beauty of language should be learnt by heart. Original compositions should be frequent, two or three a fortnight. These should include letters of all kinds, descriptions, narrations, scenes to illustrate proverbs, imaginary dialogues, besides the daily written exercise of reproduction, summary or grammar. At the end of such a period of training as had been described, the child's powers of observation, of concentration, of audition, and of self-expression in English would be in good working order; he would be able to adequately understand and use his mother-tongue in thinking, speaking and writing. He would therefore be fit to acquire a new means of self-expression.

MR. L. J. JONES (Whitgift School, Croydon) read a paper which was mainly a plea for the teaching of English grammar. There had been lately a distinct change of attitude towards this subject. Formerly it was a main branch of the study of English and was regarded as an excellent form of mental discipline. There was a tendency now to discard this theory: this tendency had been encouraged by the Board of Education who, in the Circular on the Teaching of English, said: "There is no such thing as English grammar in the sense which used to be attached to the term." The unpopularity of grammar was due to two causes: first, it had been badly taught; and secondly, modern methods do not countenance it at the

outset of beginning a foreign language. It was argued that, if the foreign language teacher can do without it, the teacher of the mother-tongue can. It was forgotten that the former only postponed grammar to a stage which children had already reached in the mother-tongue when they came to school. It was a great hindrance if the simple grammatical terms were unknown to the pupils.

MR. J. G. ANDERSON sent a paper in which he put in a plea for formal grammar, taught inductively, rationally, and as a mental discipline. English was poor in accident, but not too poor to illustrate most points of importance, and it was very rich in syntax. In English alone could the direct method be employed fully. He urged the necessity of uniform nomenclature in dealing with all grammatical terms and functions. In addition, children of ten to twelve years of age should have had some systematic instruction in word-building and sentence-making. There was no doubt that grammar was often tabooed, thanks to the influence of the Board of Education. Two other things of great importance were frequently neglected—intelligent reading and correct pronunciation of the mother-tongue. Phonetic training should be begun in connexion with the study of the mother-tongue.

The discussion turned mainly on the points of phonetics and English grammar. Prof. RIEPMANN thought correct speaking was impossible without grammar, and wanted a mission on phonetics amongst teachers of English. He thought Miss Hart's demands for the first year too heavy. Psychological reasons as well as physiological must be taken into account in determining the age for beginning a language, and eight was too young.—MISS ALTHAM wanted phonetics taught before a foreign language was begun, while M. LAVALLÉE (France) said opinion in France was divided about phonetics, and Dr. DÖRR (Germany) said it was difficult to get German teachers to give instruction in them.—MISS JANAU was struck with the facility with which English children picked up French sounds.—MR. SAMSON (Aston Grammar School) and Mr. LINSFORTH (Bolton Grammar School) both lamented the incapacity of a large number of the "free-placers" to speak their own language, and both advocated phonetics, the latter also saying that the study of a foreign language helped English and roused a desire to speak English well. The difference in the reading of English after a year's work in a foreign language was very marked.—MR. PARDOE (Handsworth Grammar School) thought Miss Hart was a little in the clouds. All he asked for was the ability to read aloud distinctly, to reproduce orally and in writing, and the comprehension of a few elementary notions of grammar.—MR. AGER (Tettenhall College) referred to the great importance of training children to put down their ideas correctly on paper. Drill in the essentials of grammar could not be too much insisted on.—MR. RUMER (Whitechapel Foundation School) had many pupils who spoke Yiddish, but he found that he could get decent French out of them. Still his English colleague taught phonetics. English masters should certainly be induced to teach some English grammar.

At the close of the discussion, the PRESIDENT, who expressed himself as strongly in favour of grammar, asked for a show of hands on two questions:—Is it desirable that English phonetics should be taught before the pupil begins a foreign language? Is it desirable that, before beginning a modern language, a pupil should know sufficient grammar to distinguish parts of speech and parts of a sentence? The meeting answered both in the affirmative, there being only four dissentients in the first case, and three in the second.

Prof. WICHMANN read a paper on "The Importance of German to a Commercial and Industrial Community." After arguing that modern languages ought to be on an equality with ancient languages in educational schemes, he said that what was of vital importance to England was the will of the nation towards progress. Progress had two tendencies; it was directed either towards a mastery over Nature, or towards a mastery of culture. In actual life the two could not be separated, but it was convenient to consider them apart. For the mastery over Nature research was required, and more research was done in Germany than in any other country. The results were accessible only in German books and periodicals, few of which were translated. Huxley once said he had to use at least six German books for one English book. In recent years as many new books were printed in Germany annually as in England and France together. In English Universities the Faculties, both of Arts and Science, had found themselves compelled to make a reading knowledge of German compulsory for all students who enter upon research work. Americans called German the Court language of modern Universities. In the chemical industries, the manufacture of electrical machinery, the employment of the waste heat of furnaces, and the afforestation of moorlands, England had much to learn from Germany. Turning to culture, he said the study of any foreign language would create in boys a whole-hearted feeling of doubt about the superiority of his own nation over all other nations. In Germany there was now a widely spread knowledge of the conditions prevailing in other coun-

tries, sincere goodwill towards foreign nations, and a strong will to live at peace with them. Had not this been the case, perhaps, a few months ago, better counsels would not have got the upper hand over national passion, stirred up to fever heat. It used to be said that the Prussian schoolmaster had won the battle of Sadowa. Last summer the German schoolmaster had done something infinitely greater—he had saved the peace of Europe. In philosophy Germany held the first place, and German philosophy had become the philosophy of the world. It was untrue to say that modern thought rested on ancient philosophy; it was really a new and independent creation. The modern way of regarding things and their relation to the mind had nothing in common with the Greek way. The modern thinker took nothing for granted, piled up observations, and was shy of general conclusions and great systems of thought. If Aristotle could return to modern life, he would get used to railways, motor-cars, and aeroplanes in a few weeks, but it would take him years of strenuous work to rid himself of his mode of thought. He pleaded for more German in English schools.

On the second day the chair was occupied by the incoming President, Dr. R. W. MACAN, Master of University College, Oxford.

Mr. ROBERT opened a discussion on "The Means at the disposal of Teachers for keeping in touch with the Living Language." He said that the teacher, like the fiddler, must keep his musical instrument in tune and his ear sensitive; he must acquire and maintain a *mémoire-habitude* of the sounds, a memory, not of images, but of sensations, and lodged, as it were, in the muscles of the throat and mouth. The teacher should practise his "phonetic scales" every day. The tone or "tune" of the living language was more difficult to acquire than the individual sounds. Each language had its own "tune." What would the "Marseillaise" sound like if played, correctly as to the notes, but to the time and with the sentiment of "God save the King"? The teacher can guard against that kind of thing by setting to a kind of "music" pieces of poetry or, better, of prose, in the following way. The piece is written down in phonetic script, and then above each vowel is placed a horizontal line varying in length with that of the vowel, and in position or height above the symbol with the pitch; a little vertical line may mark a pause. Learning pieces of prose by heart and reciting them to the tune thus set down was a most profitable exercise. To keep up vocabulary, reading was insufficient; the teacher should constantly write essays and letters which should be submitted to the criticism of competent persons.

Miss BREW (Godolphin and Latymer Girls' School) discussed "Holiday Courses" which she considered to be inferior as a means of refreshing one's French to residence in a family. For many teachers there was, however, for economic reasons, no alternative to attendance at a holiday course. The large numbers which take part in the courses were the great difficulty; they ruined the practical work. Better classification of the students was in some cases greatly needed. The speaker also gave an interesting account of the Holiday Courses at Paris, and concluded with the remark that a student might get much advantage from a course if he has some definite aim in view and does not lose sight of it.

Mr. PARDOE read a paper which was, on the whole, adverse to Holiday Courses. The lectures on literature and general topics were often delightful and stimulating; the *lectures expressives* often interesting; and phonetics, handled by such a man as L'Abbé Rousselot, thoroughly practical. But the conversation classes were usually worthless because of the large numbers, and the general arrangements often left much to be desired. He would rather recommend teachers to live in a family, attend a few lectures outside, and, for conversation, supplement ordinary conversation by attaching to oneself a personal guide.

Mr. SAMSON and Mr. ALLFRESS (City of London School) took the same view as Mr. Pardoe and preferred residence in a private family. Miss GATHERAL thought the social side of courses was most important.—Prof. RIPPMAAN referred to the use of the gramophone for "tuning up" purposes. He thought authorities who gave bursaries ought to let their students reside in private families, and that there ought to be an authoritative inspection of Holiday Courses.—Mr. HUGH was inclined to disagree about the value of the gramophone.—Mr. BRIDGE thought the time had come when Holiday Courses should be differentiated, one concentrating on practical work, another on literature, and so on. At present too much was attempted in each course.—Dr. DÖRR favoured the private-family plan.

Prof. CHATELAIN gave an address on "Le Sens classique renouvelé chez quelques Poètes français contemporains," of which the following is a summary.

Ch. Guérin (1873-1907). Olivier Caemard de la Fayette (1877-1906) et Léo Larguier, né en 1878, ont eu vingt ans au moment où la génération littéraire des grands Symbolistes était à son apogée (Verlaine, Mallarmé, Moréas, etc.). Ils ont subi leur influence, surtout les deux premiers. Mais comme Moréas et Henri de Régnier, ils se sont ensuite tournés vers

d'autres formes de poésie, et ils ont retrouvé le sens classique. Leur poésie personnelle atteint à un certain degré de généralisation, d'où un intérêt plus général; ils disciplinent leur émotion et ordonnent leur ardeur, évitant le désordre romantique; leur style est plus sobre et plus pur que celui des romantiques, leur vers est plus solide et plus plein, et les effets de rythme et d'harmonie qu'ils produisent sont toujours légitimes. Ch. Guérin, dans "Le Semeur de Cendres" et "L'Homme intérieur," s'élève jusqu'à la poésie philosophique de Vigny, mais il diffère de lui par sa sentimentalité plus passionnée et son don d'observation délicate. De la Fayette, dans "Le Rêve des Jours" et dans "La Montée," unit une flamme lyrique aussi noble et pure que celle de Lamartine à une faculté verbale qui traduit les vibrations de la lumière et les frémissements de la sensibilité. Larguier, qui se rattache à Hugo et à Gautier beaucoup plus qu'aux Symbolistes, est dans la pure tradition des lettres françaises; il dessine, il sculpte, mais en même temps il évoque. Son instinct rythmique sûr et les sonorités imitatives font de "La Maison du Poète" et des "Isolements" deux recueils où l'on peut puiser pour l'enseignement dans les écoles des textes d'explication, d'analyse littéraire, accessibles et instructifs.

The address was interspersed with readings from the three poets discussed, which added greatly to its enjoyment.

A paper by Prof. SONNENSCHNIG on "The Study of Latin in the Age of Elizabeth" concluded the meeting.

NORTH OF ENGLAND EDUCATION CONFERENCE.

OF conferences the name is legion, and as they multiply each year the movement must gather force for combining them in a grand annual parliament of educationists. But the North of England Education Conference must stand alone. It has unique significance; representatives of Local Authorities from Liverpool to Newcastle and from Blackpool across country to Sunderland mingle with delegates from Northern Universities and from a long series of societies—from the Training College Association down to the Association of Teachers of Domestic Subjects. These limits are not narrow, but the company is still more comprehensive. H.M. Inspectors rub shoulders with Local Inspectors and forget all about the Holmes Circular. Teachers, too, feel themselves unuzzled and speak out frank words to officials and Inspectors alike. And then we find that other rather more nebulous class—the educationists proper, who study the child in the abstract. The House of Lords was represented by Earl Grey and Lord Barnard; and the lords of industry and commerce came and were not silent. It was a cosmopolitan assemblage in the stately hall of Armstrong College, Newcastle-on-Tyne, January 5 and 6.

The lighter side of the Conference was too marked a feature to be passed in silence—the Civil Reception held by the Lord Mayor (Sir W. H. Stephenson, D.C.L., D.L.), the *Conversazione* given by the Council of Armstrong College, and other social amenities which were not printed in the program.

Sir HUGH BELL, Bart., D.C.L., LL.D., was the overshadowing personality of the first session. His high position in the industrial life of the North, his zeal for the enlightenment of the people, his sincere words, shot through with playful humour, carried all with him. Every one felt the fitness of speaker to theme and theme to speaker. "Education and Practical Life": in Sir Hugh the two are wedded, as he claims they ought to be in the schools. He seemed to think the audience might be disinclined to agree with him that education is *not* a teaching of mere facts. Perhaps he was right; the ancient tradition dies hard. Sir Hugh pointed out that "facts" are uncertain, changing with changing years. And "just because of the uncertainty do we want to train the mind which has to deal with the external world.... By education I hope to teach each one to use the implement he possesses better and better for the purpose for which it appears to be destined"; the mind being this implement. "The mind must meet the ever-changing conditions of the external world with an alertness which was never so great as to-day." With this as text, Sir Hugh Bell pleaded for the removal of mischievous narrownesses. Learning should be freed, for instance, from priestly domination, under which it had lain so long. Educational debates in Parliament are battlefields where rival warring sects meet. "Non multa sed multum" is the watchword of true education; not encyclopædias but citizens the finished article. Specialization, therefore, should not come so early as it tends to do. "Let us try to give instruction which will stand the strain of those two fatal years which elapse now between emancipation from the discipline of the school and the shouldering of the discipline of life." And in a peroration the raising of the school age to sixteen,

to cover these two crucial years, was urged with due confidence that "the productive capacity, and with it the physical well-being of the people, would, within a generation, be increased out of all proportion to the immediate loss which would be sustained." There is nothing new in Sir Hugh's address; most of the ideas are current coin. Quite so; but his superscription made them pass for high value in the Conference.

Many speakers and many gospels followed. Lord BARNARD was specially good; he is an authority on agricultural education. He found him-self in complete accord with the general principle of the paper. "A good, sound, general education is wanted to make a good farmer; and this must come prior to technical training."—Mr. THOS. BELL appealed, as the head of a business firm, for thorough teaching of modern languages, particularly Spanish.—Earl GREY gave Canadian illustrations of Government enterprise in agricultural training.—Mr. G. BUTLER, the nephew of the Master of Trinity, defined school as wider than any walls. And so the discussion kindled into candid and lively utterance, a burst of acclaim greeting the demand for higher salaries, "that the best men in the land might not disdain the office of teachers."

Sir HUGH BELL's impromptu replies were even better than his set oration. Every critic who challenged him into reply should be thanked. Here are a few chance gems: "Teaching is much more like poetry than pig-iron: you cannot manufacture it"; "the ideal education authority is the authority that leaves you alone"; "the less we can do from London, from Newcastle, the better"; "the Government is just you in another way"; "it were better if boys were more out of school than in it: they should have more instruction in the open air and about it."

The afternoon session was sectional and each could follow his own interests. An important debate took place on the question of the plannings of elementary school buildings, Mr. J. E. DOGHERTY, of Newcastle, and Mr. TOPHAM FORREST, the Architect to the Northumberland County Education Committee, introducing the subject. So far as one could gather, the opinion generally accepted was that new plans would proceed on the lines of variants of the pavilion or courtyard type, with a segregated hall, and with classrooms for forty or fifty instead of sixty children. A "games day" as part of the routine of each elementary school was mentioned by Mr. Dogherty. He suggested the provision of grass fields for groups of schools.

Sir WALTER PLUMMER presided over a discussion as to teaching history by local records. Prof. HEARNshaw, of Armstrong College, and Mr. G. P. DUNN, a Head Master of Corbridge-on-Tyne, or, to use the Latin name, of Corstopitum, were the principal speakers. Mr. Dunn described the work of his scholars. They visited castles and ruins in the privileged neighbourhood. It was important to obtain the correct atmosphere on these expeditions. On the way there and back old English songs were sung. Returning to the school, the significance of the place they had visited was fitted into the national story. The children made their own history textbooks, with local notes. Local biographies were freely used, and with excellent results.

Miss BURSTALL, of Manchester, led the attack on examinations at a conference on this vexed subject. She held that examinations should follow teachers and not *vice versa*.—Dr. BEARDER, of the Northallerton Grammar School, advised those who disliked examinations not to hold any. He had abolished examinations and marks alike.

"MICHAEL SADLER"—that was the great name among the delegates on Saturday. "Education and the State in relation to (a) Curriculum, (b) Finance, (c) The division of control as between the Central and Local Authority"—the theme was worthy of the statesman. Terms were first of all defined. Even Matthew Arnold spoke of the State in a loose and ambiguous sense. "Fallacy" is one of Prof. Sadler's typical words; he used it to describe the view that the Codes and Regulations of a Government Office are identical with the considered judgment of the whole community. And he swept away the cobwebs from the word "education"; private and unsubsidized schools, institutions such as public libraries and art galleries, trade customs and social traditions must be held in remembrance, though it was his purpose to employ the term in the narrower sense of organized instruction. He contended that the complete control of education by the State is inexpedient and impracticable. The mind is free, though it may be cramped by mistaken forms of State control. No governmental regulation can thwart the intellectual destiny of a people. On the other hand, *laissez-faire* is as false a gospel as the doctrine of collectivist control. The essential thing is that the intellectual and moral autonomy of every school, college, and University should be secured, subject to the enforcement of sufficient guarantees for the adequate discharge of appointed duties.

Educational vitality is the best thing that public money can buy. This was Prof. Sadler's golden dictum on the question of the State

in its relation to curriculum and inspection. A school should have freedom of development. The State might well diffuse among educationists accurate and lucid records of what was being done in the best schools everywhere. It had, as instruments, the press and the public libraries. Another practical suggestion was for the provision of provincial head-quarters for the inspectorate. At each of the chief centres the Government might open an office where the Inspectors (primary, secondary, and technical) could regularly meet, where a staff of clerks could relieve them of the more mechanical part of their correspondence, and where records of their experience of the schools in the district could be preserved.

Finance was passed in review. In elementary education the results were presumably beneficial in practically equal ratio in each area throughout the country. It seemed a fair principle, therefore, that half the expenditure should fall upon the Treasury and half upon local rates. The Local Authority should be left free—even encouraged—to enhance its own system by contributing more than the normal. And endowments should be used to raise the efficiency of the favoured schools, not allotted to the relief of rates. Else, what motive for benefactors to give money? In secondary and technical education of the lower grade, the same principle of division might apply. But, in the higher grade, it seemed just that the national contribution should be two-thirds, and the local one-third. The logic for this was that such education must be focused at certain centres which do not derive advantage commensurate with the expenditure. And the product of the highest types of education is frequently needed for work of a predominantly national character. The spending of public money in the distribution of educational information deserved praise.

Finally, the Board of Education might organize more effectively the machinery of consultation. An Educational Council comprising representatives of the Local Authorities, urban and rural, as well as of the teachers, the Universities, &c., might be established and given an office at Whitehall. With it might be merged the present Consultative Committee; and the Teachers' Council might well be one great section of the larger body.

"Would that he were at the Board of Education!" This was our whispered tribute; no less so when he wound up the debate in a speech of far-sighted, full-souled statesmanship. And the whisper sprang to the lips as he appealed for a change of temper and attitude on the part of those who directed English education. Two speeches justified the holding of the Conference; they were those of Sir Hugh Bell and Vice-Chancellor Michael Sailer.

We needed the afternoon to ponder the wisdom of the morning; but other meetings were held. The Awarding of Scholarships and the Methods of Raising the Moral Tone of the Corporate Life of the Schools, were the topics down for debate. Meanwhile, Sir W. B. RICHMOND, R.A., and the Hon. WALTER JAMES discoursed on the place of art in a liberal education.

What a banquet it all was, this Newcastle Conference! Surely, no other gathering provides such goodly fare, such high challenging of thought, such wealth of practical suggestions. And there was the Publishers' Exhibition; in fact, so much that one had to be content with mere glances when one hungered for depths. Nottingham is the arena chosen for 1913.

THE CLASSICAL ASSOCIATION.

THE Annual Meeting of the Classical Association was held at King's College, Strand, on January 8 and 9. The chair was taken by Dr. KENYON, of the British Museum. After a meeting of the Council, Miss H. L. LORIMER (Somerville College) read a paper, illustrated by lantern slides, on "Dress in Homer and in Archaic Greek Art." In the afternoon the question of Greek and Latin as alternatives was raised by a motion of Prof. ERNEST GARDNER, who moved:

"That it is desirable that Greek should be made an alternative subject of study with Latin in institutions where one classical language alone can be studied."

He advocated co-operation with the Hellenic Society, with whose Memorandum on "The Place of Greek in Education" their Association was in general sympathy. The present time was a critical one for the study of Greek; and there were two possible lines of policy open. Either they might stand firm on privilege and defend Latin as a citadel, even if the outwork of Greek is lost and in this case Latin was not likely to survive much longer; or, by an active propaganda, defend classical studies, and Greek in particular, on their merits; and in this case the advocates of Greek had the easier task; for the Greek authors are obviously the more suitable for school reading, especially if Homer and Herodotus be not excluded, and the

Greek classics were more in touch with modern life and thought than the Latin. If there were not time to fit both classical languages into the curriculum, must Latin always be the one chosen, and might not Greek sometimes be substituted for it altogether or in part? It was an anachronism to regard Latin as the necessary basis for all literary and scientific education. In many studies Greek was the more useful. To give Greek a fair chance on its merits two things are essential—first, that Greek and Latin should be alternatives, where both are not required in University entrance examinations and their equivalents; and that the test for Greek should not be merely in grammar, but in intelligent reading and translating of classical authors; and, secondly, that all those responsible for classical teaching in schools should be competent to teach Greek as well as Latin. It would therefore be a grave mistake to allow honours in Universities in one classical language only. If the choice of Greek involved no subsequent disability and the possibility of learning it were brought within the reach of all capable of profiting by it, what remained was to convince teachers and parents of its educative value, and to encourage its study, especially in girls' schools and other schools free to choose their curriculum.

[The Recommendations of the Council of the Hellenic Society, based on the Report of a Special Committee appointed to consider "The Place of Greek in Education," are, in brief, as follows:—

1. Wherever only one classical language is required Greek should be admitted as an alternative to Latin. Any movement to allow Classical Honours to be taken in one language only should be strongly opposed.

2. *The Public Schools.*—Representations should be made to head masters urging that an opportunity of learning Greek should be given where it does not exist at present to boys who have not already begun it at a preparatory school. A prominent place should be given to the study of the great non-Attic authors, especially Homer and Herodotus.

3. *Other Secondary Schools.*—Greek, although it could not be given a position of privilege, should at least have a fair opportunity on its merits and not be placed at a disadvantage compared with other subjects. As far as practical, an opportunity of learning Greek should be placed within the reach of all who desire it or are capable of profiting by it.

4. *Girls' Schools.*—The educational value of Greek and its suitability for inclusion in a curriculum not so heavily burdened by the necessity of preparing for professional examinations, should be brought home to head mistresses.]

Prof. GILBERT MURRAY, in seconding, disclaimed any prejudice against Latin. Even in poetry, where Greek was supposed to be supreme, he reckoned large portions of Latin poets among the priceless and permanent treasures of the world. It would be most unwise to appear to be running one language against another. It was a strange phenomenon that while education as a whole was on a rising wave, while education was better and more diffused than ever before, Greek alone should be on a falling wave. He recognized that there was (1) a real grievance against the old-fashioned classical education as being too uniform and too narrow, and (2) much prejudice against Greek and bad feeling on the part of people who, in their youth, had been compelled to study Greek, when their whole natural bias was perhaps towards science. But there was great danger now of a new uniformity in the modern course which would be as disastrous as was the old; and, however few the people might be who wished to learn Greek, if only 5 per cent., their liberty of option should be respected, and he was sure that even those who learned Latin only would be the better if some people learned Greek. It was bad that everybody should be educated in the same things only, and it would be a miserable catastrophe if England became a nation to which Greek was an unknown tongue.

Dr. ROUSE pointed out the practical difficulty of offering an alternative in schools of moderate size, where it might mean an addition of two to the staff.

Mr. J. W. MACKAIL opposed the motion, protesting, first, against the doctrine, that Latin and Greek could be regarded as fairly alternative. To approach them indifferently was to ignore history. We derive our civilization and our life from Latin, and we can only say that of Greek in quite a different sense. For a thousand years the world had, somehow, got along without Greek; but he did not think it would be seriously maintained that it could get along without Latin. Nor ought we to break the relations between the two. To learn Greek before Latin would be like putting on your coat before your shirt: to learn it without Latin would be to build a superstructure without a foundation. To suppose that we could do it involved an historical misconception, and, without Latin, our education would be necessarily imperfect.

Dr. LEHMANN HAUPT (University of Liverpool) said that this was not an English question, but an international one, and pleaded for

the saving of Greek as an element in culture. Our culture was not based on Latin; Roman culture was Hellenism in a Roman dress. Even if we could ignore the influence of the Renaissance, why should we not prefer to go to the source?

Mr. J. W. HEADLAM brought the discussion back to the terms of the motion, which he did not think was worth passing. If it helped to undermine Latin, the result might be that Latin would go, and then people would take something else instead of Greek, and both would be lost. Among others who spoke were Prof. ANDERSON, Prof. HENRY BROWNE, of the National University of Ireland, Mrs. ADAM, and Mr. ARUNDELL ESDAILE. Eventually, on the motion of Prof. SONNENSCHN, the motion was adjourned to the next general meeting.

At the morning session of the second day, the Bishop of LINCOLN delivered his Presidential Address on "Hellenism as a Force in History." To condense a discourse so weighty and masterful would be no easy task, and, as it will appear in full in the "Transactions" of the Association, we here give only the heads: 1, the influence of Greek on the Wisdom Literature of the Jews; 2, Christianity Hellenized from the first; 3, the Renaissance born of recovered Greek literature, a cult of Greek beauty; 4, the Reformation, a revolt against ecclesiastical tyranny, based on Greek liberty as expounded by St. Paul; 5, the precursors of the French Revolution, Rousseau and Voltaire, derived their political theories indirectly from Greek; 6, the Romanticist poets, Byron, Shelley, Wordsworth, Coleridge, were saturated with the essential qualities of Hellenism; 7, to-day there may be less of pure scholarship, but Greek life and Greek art are known as they never were before. The study of Greek literature will ever be an essential part of the education of the world.

Prof. HAVERFIELD read a paper, illustrated with lantern slides, on "Roman London." Londinium, as we know from Tacitus, was a full grown, though unwallied town in A.D. 61, when it was sacked and burnt in the Boadicea rising. It rose from its ashes and flourished during the second and third centuries, and the title Augusta given to it in the first half of the fourth century shows its importance. We know, too, the area, about 330 acres, which agreed approximately with "The Liberties of the City," by the line of the walls which have been approximately traced, but of the gates we know little, and of the buildings nothing. The latest mention of Londinium in literature was in A.D. 368. Coins carried on the story to the beginning of the fifth century. Between that and the appearance of an English London in the sixth century, all is utter darkness. Roman-British towns went down to the dust before Saxon savagery or stupidity.

At the business meeting, the Master of Trinity (Dr. H. M. BUTLER) was elected President, and Lord LOREBURN, Lord MORLEY, and the Bishop of LINCOLN, Vice-Presidents.

THE LONDON COUNTY COUNCIL CONFERENCE OF TEACHERS.

A GAIN the Theatre of Birkbeck College was full to overflowing and many applications for tickets had to be refused. While the secondary teachers meet in their tens to discuss mainly esoteric questions of economy or organization, the elementary teachers gather in their hundreds to debate matters of pure pedagogy.

The first subject was "Specialization in a Secondary School," but the debate ranged at large over various kinds of schools. The opener, Miss KYLE (Head Mistress of the Highbury Hill High School), was a root and branch specialist. Her ideal was a school that kept its pupils from three to eighteen, with a specialist teacher or teachers for each subject. Further, the same teacher must take the infant class and the sixth form. To know the mind of youth he must know the mind of the child.

Mr. CYRIL COBB, who was in the chair, raised a laugh by observing that when, in fifteen years' time, the Education Committee had carried out their projected reforms and reduced infant classes to forty-eight and upper classes to forty, the work of specialization would be facilitated.

It was apparent that Miss Kyle had struck a note above concert pitch, and each succeeding debater lowered it a peg. Mr. J. W. SAMUEL desired specialists for music and drawing, but warned head masters that they would not find their work lightened if every class teacher had become a perambulant professor of his pet subject. Specialization was not a panacea for every form of pedagogic debility.—Miss C. C. GLOVER asked a few very pertinent questions. Did not specialist teachers get rather sick of taking the same subject day in and day out? Was not a change of work rest? Was not

the specialist prone to become in a year or two rather narrow and bigoted in her subject? And was there not a chance of the ordinary child slipping between the various teachers?

The subject for the first afternoon was "Drawing in Schools," and the three protagonists advocated respectively chalks, the brush, and the pencil. The layman, it must be confessed, was left at the end in much the same position as M. Jourdain among his rival professors, and all that the Chairman, Prof. IMAGE, could find to say was that he wished he could transplant to Oxford a little of the enthusiasm of London teachers.—Mr. BALLARD threw out one original hint. There was much talk about Nature study, but children's early drawing showed that they were chiefly interested in human nature. Why should not a study of man at rest and in movement form part of the drawing lesson, at any rate, in the upper classes?

The morning of the second meeting (Friday) was given up to the psychologists, and Prof. ADAMS was in the chair. Prof. MYRES (Cambridge University) led off with a paper on "Formal Training (Mental Discipline)." His acquaintance with the past history of formal training was almost entirely limited to his experience as a schoolboy, when he had to learn by heart page after page of the "Aeneid" and of doggerel rhymes about Latin genders in order to educate his memory; when he had to master books of Euclid wholesale in order to exercise his powers of reasoning, and when his attention was directed to material which was utterly uninteresting, because it was almost incomprehensible to him, for the sake of cultivating that discipline of mind which overcame the temptation of distraction. At the same time, there could not be any doubt that when we learned, remembered, or reasoned, there was in each case a common element in our experience, whatever the material that we learned, remembered, or reasoned about. Conceivably, the doctrine of formal training might have to be treated very differently in the case of the untrained child and in the case of the fully trained adult. Instead of arguing from naive experience or from false psychological theory that we had the faculty of this or the faculty of that, and that, consequently, we only needed practice in one subject of the exercise of that faculty for the improvement thus gained to be transferred to all other subjects in which that faculty was involved, we must discover by investigation what kinds of ability were closely related one to another, and to what extent the effects of practice were transferable from one to another kind of mental work. If they were unable to obtain introspective data from children they must for guidance and suggestion repeat the experiments on adults, and with due caution apply the results. The mind was not divided into innumerable watertight compartments totally independent of one another. However distinct those compartments might be at the lower levels, even there they were connected together, while at the highest levels their connexions were yet more complex so long at least as the unity of the organism was preserved.

Mr. C. L. BURT (University of Liverpool) described some experimental investigations of formal training both in the school and in the laboratory, from which he deduced the conclusions that the value of the inculcation of specific habits under changing conditions depended directly on the presence of a general idea, which would serve for their control, and that improvement in any single mental function need not improve the ability in functions commonly called by the same name. What should be done was to emphasize and extend not the elements peculiar to and characteristic of school and school conditions, but the elements shared in common by the curriculum and conditions of school and the conditions and requirements of life.

Dr. F. H. HAYWARD said that all the results of experimental psychology went to show the futility of indirect methods of training indiscriminately applied. No one ever learnt to do one thing by doing something else, though it was possible to make one thing subsidiary to learning something else if it were done with that express object.

At the afternoon sitting Sir JAMES CRICHTON-BROWNE presided, and opened a discussion on "The Treatment of Backward Children." He insisted on the necessity for co-operation between the teacher and the medical officer. The causes of mental backwardness were multifarious, some of them remediable and some not, and only the doctor could diagnose the case and prescribe the proper remedies. He instanced a case of ignorant barbarity that had recently come to his notice. Behind the tapestries of an ancient mansion had been discovered the copy books of a child, each page blotted by tears. The family archives showed that this child was an only son and heir of a defective intellect, who had been driven to death by a hard and anxious mother. Such extreme instances were not common, but there was still a terrible waste of expenditure on cases of arrested brain development that were irremediable. In other cases the backwardness was due to malnutrition, and for thirty years he had been preaching that it was culpable folly to exact brain work from underfed children. One free meal a day was a boon for which he was grateful, but the boon would be more than doubled were it split into two. Much pernicious nonsense was talked about special

brain foods. What the growing brain needed was easily digestible nourishment taken at not too long intervals. Passing to the case of forward children, Sir James said that precocity was as undesirable as backwardness. The higher the stage of intelligence the slower the growth of the brain, and in men the brain continued growing to the age of twenty-five or even later. The savage child was in advance of the civilized child in mental evolution, as was the city arab of the rustic; but in the long run the countryman had the better of it. As instances of precocious children who died young or developed an uneven or unhinged intellect he named Raphael, Chatterton, Edgar Allan Poe, Ruskin, and John Stuart Mill.

Mr. J. L. PATON urged that dull and stupid boys should not be excluded from secondary schools as they were from the great public schools, but, as far as possible, put into a division by themselves, that they might not be disheartened by finding themselves always at the bottom of their class.

PUBLIC SCHOOL SCIENCE MASTERS.

THE first session of the Annual General Meeting of the Association of Public School Science Masters was held at the London Day Training College, in Southampton Row, on January 10, with Sir J. J. THOMSON, F.R.S., as Chairman. There was an Exhibition of scientific apparatus and books.

Mr. M. D. HILL (Eton) opened a discussion on "Chemistry and Physics as a necessary Introduction to Biology." He had always believed in, and tried as far as possible to insist on, a preliminary course of chemistry and physics for boys intending to take up biology. But experience proved that, however good this may be in theory, in practice such courses have little value. Boys who had done no science previously did just as well in biology as those who had done some chemistry and physics, in which, as a rule, boys studying biology took no interest. He doubted, therefore, if it was necessary, or even highly desirable, to insist upon this previous training.

Mr. VASSALL (Harrow) said that he would deplore anything which took away from any proportion of boys with a scientific inclination the opportunity of learning physics. He was always trying to seduce some budding physicist into becoming a botanist—in the hope that something might be done to improve the present lamentable condition, as he considered it, of botanical knowledge and investigation in England.

Mr. RICHARDSON agreed with Mr. Vassall. He had no sympathy with education in watertight compartments. He had made investigations of boys' minds, and found that they had tufts of ideas on one subject and tufts of ideas on another, like tufts of leaves at intervals along a branch, but nothing connected one tuft with another.

Mr. E. I. LEWIS (Oundle) read a paper on "Plant Biology as a School Subject." Plant biology was one of the few school subjects whose value and interest to all pupils increased throughout their lives, furnishing to many people the chief relaxation in after life. To some pupils—a fair proportion—it also provided a foundation for the proper understanding of their future occupations. The work might consist almost entirely of observation and experiment, whether in the classroom or out of doors, and a teacher need not possess any special technical knowledge.

Mr. SANDERSON (Oundle) followed. He protested humorously against plant study, as boys got so interested in it that they were always digging in the garden when they might better be playing cricket and football.

Dr. E. B. LUDLAM (Clifton) advocated the claims of "Qualitative Analysis," which he said had now almost disappeared from the ordinary school laboratory course. Where it had been taught the work had tended to become mechanical, and practice to outrun theory. He believed, however, that it was the most stimulating of all forms of practical chemistry, and he laid down a plan for its study, with simple exercises in the identification of substances at a very early stage, with a more thorough course later, emphasizing the science rather than the art. The practical examination should aim at testing, and marking, theoretical knowledge, and lay stress on getting out difficult mixtures. In conclusion, he commented severely upon what he considered some of the evils of the scholarship system.

Sir J. J. THOMSON said that, at Cambridge, they were fully aware that the present scholarship system was not perfect, and amendments to the scheme would be gratefully received and considered.

The discussion was continued by Prof. ARMSTRONG, Mr. SANDERSON, Mr. BERRIDGE (Malvern), Mr. RICHARDSON, Mr. GARDINER (Cheltenham), and others.

At the second session, on the morning of the 11th, Prof. J. J. THOMSON delivered his Presidential Address. He had but little faith in theories of education. His experience was that, given small classes and intelligent teachers, it did not much matter what theory you adopted, and if these conditions were absent it did not much matter either. He deprecated the present tendency to glorify the lecture and exalt hearing above reading. Generally, the textbook would be found superior to the lecture, certainly superior to the students' notes of the lecture. Nor did he hold with the prevailing view that pupils should be examined by their own teachers instead of by external examiners. This too commonly led to the unintelligent cramming of notebooks. He gratefully acknowledged the marked increase within the last few years of the amount of mathematical knowledge that science students brought with them from school. On the other hand, in modern languages they came very ill prepared, unable to translate an ordinary German textbook. This, he supposed, was due to the new and doubtless highly improved methods of teaching modern languages.

Mr. C. E. ASHFORD (Royal Naval College, Dartmouth) read a paper recommending the postponement of electrostatics till after the school course, or confining the study to specialists. This might be considered theoretically an anomaly, but, judging from his experience as a science master at Harrow, it was better to limit boys up to fifteen or older to current electricity.

In the afternoon Mr. G. F. DANIELL opened a discussion on "Laboratory Examinations conducted by Public Bodies."

Mr. A. VASSALL (Harrow) read a paper on "Educational Psychology." Very few public-school masters had the time or inclination to keep abreast with current psychology, but their experience must have confirmed the conclusions of J. Adams and Thorndike that general powers of observation are not increased by special training. There is no "overflow" from one subject to another unless the subjects cover common ground. If the old theory of "mental gymnastics" was exploded, it followed that the choice of subjects was of supreme importance. The ideal curriculum involved giving the boy as much general knowledge of certain fundamental subjects as was desirable for culture and æsthetics; but of other subjects only so much as would not overstrain his mental capacity and so sap his intellectual self-reliance, with a special knowledge of subjects that would be of direct use to him in after-life.

Prof. ARMSTRONG refused to accept the evidence or experiments of the psychologists. Their tests were full of fallacies. The prevailing fault of teachers was that they did not take account of the widely differing types of mind. Thus, an engineering or construction type of mind could be interested in chemistry only by appealing to it through subjects cognate to its own natural bent. The difficulty was to devise a scheme of education practical and simple enough for the majority of minds.

Dr. NUNN (London Day Training College) said that psychologists were well aware of their own imperfections. They were pioneers, but had, he believed, laid a sound foundation. The mind was not like a photographic plate, nor could its sensitiveness to all subjects be increased by attention to one. None the less, there was a certain development outside the actual thing observed. A student by observing gained self-reliance; he learned that if he was to observe he must not be in a hurry.

Sir ARCHIBALD GEIKIE was elected President for the ensuing year.

THE PRIVATE SCHOOLS ASSOCIATION.

THE Annual Meeting was held in Dr. Williams's Library, Gordon Square, on January 4. Mr. S. MAXWELL, Manor House School, Clapham, presided.

Miss L. M. REYNOLDS (Devonshire House School, Carlisle) read a paper on "School Journeys: a record of twelve years' experience of open-air education." For the past twelve years she had taken her pupils in parties of from fourteen to thirty-two on three days' excursions into the country. These annual expeditions formed a focus for lessons in geography, history, literature, Nature study, and drawing. Sketch-book and notebook in hand they studied on the spot the topography, botany, and animal life of the Border, and she could trace as a result a perceptible increase of interest in all three studies, and they gave an outlet for originality and independence of character. It was one of the advantages of private schools that they could pursue their experiments without let or hindrance.

Miss A. M. KELLETT (Brazenose School, Stamford), in a paper, "Should Latin be taught to Girls?" advocated the study of Latin as a corrective to the colloquialism, slang, loose talk, and loose writing of the day. It was a study that would enable them to understand and

use the more beautiful forms of our language. In the discussion that followed, it was urged that girls preparing for the medical profession—an increasing number—needed Latin. The Rev. F. W. AVELING said that doctors were moving heaven and earth to get rid of Latin, and would probably succeed. Nevertheless, Latin should be retained for the sake of style. If Dickens had had a classical education he would have written better. Thackeray and George Eliot both knew Latin and their style was very fine.

A debate on "Training" was introduced by Mr. A. D. HARDIE (Linton House School). Few head masters at present took any real interest in the subject. It was only men of inferior quality who submitted themselves to a year of training. Hence the complaint, for which there was some justification, that the training colleges turned out poor disciplinarians. Training would not turn a man with no natural aptitude into a teacher, but even the born teacher would be the better for it. It should be post-graduate.

In the afternoon, Sir PHILIP MAGNUS, the Honorary President for 1912, delivered his address on "The Future of Private Schools." He confessed that the outlook at present was overclouded, but he was confident that it would prove only a temporary depression. The tendency of recent legislation had been to make all education a State concern, and formidable rivals in State-aided and rate-aided schools had multiplied exceedingly. He could not regard with unalloyed satisfaction legislation which tended to lessen the self-dependence of the subject, and it behoved them to be on their guard lest State action should destroy that diversity of effort which was the life-blood of a commonwealth and prevented it from falling into dull and colourless uniformity. Germany was a signal warning of the defects of an over-centralized bureaucracy. J. S. Mill wrote: "An education established and controlled by the State should only exist, if it exist at all, as one among many competing experiments." The Board of Education, as it at present existed, had undoubtedly raised the standard of excellence in our schools, but its constant incursions into the region of voluntary effort were a danger to be guarded against. Within the last decade it had reached our secondary schools and was about to be stretched over our technical schools and Universities. It should be stopped in time from enforcing its standards and curricula on private schools, and should exert its influence to prevent Local Authorities from setting up schools of their own to supplant by unfair competition efficient private schools. Their efficiency should preferably be tested by the Universities and this test recognized by the Board of Education. It was in the private school that experiments could best be tried, and masters who depended wholly on the goodwill of parents were the most likely to train their pupils for practical pursuits and equip them to discharge the full duties of citizenship.

ASSISTANT MISTRESSES IN PUBLIC SECONDARY SCHOOLS.

THE twenty-eighth Annual General Meeting was held on Saturday, January 13, at the Grey Coat Hospital, Westminster, by the kind permission of the Governors and of the Head Mistress, Miss Steele. Miss LEES (Clapham High School) presided, and the meeting was very well attended. The election of Miss DRUMMOND (North London Collegiate School) as President to succeed Miss Lees was announced.

Miss LAURIE had obtained statistics which show that the usual retiring age for assistant mistresses is fifty-five, and that consequently, pensions for women teachers should begin at that age rather than at sixty.

In her Presidential Address Miss LEES spoke of the events of the past year and the more favourable attitude of the Government towards Registration and Superannuation. The success of any scheme for the latter depended on the solution of the fourteen problems set by Mr. J. A. Pease, whose appointment to the Board of Education she welcomed. He had already shown his sympathy with the aspirations of secondary teachers. She thanked Mr. Rendall, Mr. Rawlinson, and Sir Philip Magnus for their efforts to obtain the exclusion of assistant mistresses from the operation of the Insurance Bill, and Mr. Pease for his amendment. She then passed to the amended salary scheme which was brought forward later in the morning, and said that official papers showed that out of 3,799 assistant mistresses 399 received less than £100, 3,012 between £100 and £160, 244 between £160 and £180, 143 between £180 and £260, only one over £280. More than 89 per cent., therefore, were receiving under £160 on January 31, 1911: these figures were sufficient to contradict any undue optimism with regard to the present position. The growing recognition of women's professional associations was, however, a hopeful sign. Turning to science teaching

Miss Lees urged that it should not be made subsidiary to other subjects. Its aim is to produce clearness of thought, unbiased by personal feeling: it teaches children how to collect facts, to classify and describe them as simply as possible, to sum them up in a so-called law of Nature or descriptive formula. Order and continuity are its characteristics. When science is made subservient to "house-craft" or "domestic science" this continuity becomes impossible. Girls whose help is needed in the work of the home should learn the proper methods of fulfilling home duties as a separate study; but where this is possible it should be deferred till the school course is over. Where "occupational studies" are necessary they should be taught openly and not under the name of education.

After an animated and useful discussion on the Insurance Bill, of which Miss Lees explained the provisions relating to teachers, a resolution was passed by a very large majority warmly approving the action of the Executive in attempting to secure the exclusion of assistant mistresses from the operation of the Bill, since the projected Superannuation scheme is more likely to meet their needs.

The formation of an approved society for teachers only was discussed, and it was pointed out that the exceptionally good health of members of the teaching profession would enable them to secure special benefits. A discussion of pension schemes followed, and it was resolved that pensions should be payable at fifty-five, contributions to begin at the age of twenty-five. The scheme should not be compulsory for existing teachers.

Miss PRIDEAUX introduced the amended salary scheme which, after thorough discussion, was approved by the Association in every particular by large majorities.

In the afternoon Miss BERRYMAN (Clapham High School) read a suggestive paper on "The Need for more definite Teaching of European History in Schools," which was followed by discussion.

THE HISTORICAL ASSOCIATION.

THE Annual Conference was opened on January 11, at Manchester University. Prof. TOUR presided, and, in moving the adoption of the report, stated that the Association had now over a thousand members and fourteen Branches. A new and important Branch had recently been opened at Nottingham. This was the first occasion on which the Society had held its general meeting outside London, and Manchester appreciated the compliment. Their most important work during the past year had been the extension of the sphere of their publications.

Mrs. J. R. GREEN said that in Ireland they were in a bad way as to history. Trinity College was unable to give a living wage to an Irish historian, and Belfast had cut down the salary of their Professor on the ground that history was not an important subject. The Irish Board of Intermediate Education had made history a compulsory subject, as it was in England, but had made it a part of English grammar.

Prof. POLLARD, of the University of London, was elected President for the ensuing year. In the evening Prof. MUIR, of the Liverpool University, read a paper on "The Connexion between History and Geography."

At the second meeting a discussion took place on "The Teaching of History in Elementary Schools." Mr. FRANK J. ADKINS (Sheffield) moved:

"That a course of historical instruction sufficient to give children as clear an idea as their age would permit of the growth and nature of the British State, and of their rights and duties as citizens, should be a first charge upon the time of elementary schools."

The treatment should be dramatic and appeal to the æsthetic sense. It should also train children to the discovery and appreciation of cause and effect. History should be at least as coherent as geography, and perhaps the best means was to seek out its economic basis. The other views of history which are required to make intelligible our national history might be given in connexion with the Scripture lessons.

A rider, adding to the resolution "after due provision for the teaching in reading, writing, and arithmetic," was rejected by a large majority.

Prof. POLLARD remarked that Local Education Authorities had regarded with a friendly eye the resolution passed last year that in every school, primary or secondary, of sufficient size, there should be a specially qualified teacher of history. Opposition came from secondary teachers who thought it mattered little what children were taught if discipline were preserved. The University of London

had endeavoured to secure a supply of competent teachers by establishing a diploma in history.

The discussion was continued by Prof. LEONARD (Bristol), Prof. UNWIN (Manchester), Mr. J. L. PATON, and Prof. TOUR, the President, and the motion was adopted.

The Honorary Degree of Doctor of Letters was conferred on Prof. Firth, Prof. Lodge, Dr. J. E. Morris, and Prof. Pollard.

An Evening Reception was held in the Whitworth Hall, by invitation of the University Council, and an afternoon was spent at the John Rylands Library, where a special exhibition of some of the greatest treasures of the Library had been arranged by the Librarian, Mr. Guppy.

THE ENGLISH ASSOCIATION.

A CONFERENCE of Teachers was held on January 13, at University College, Gower Street, on "The Teaching of English Composition in Schools." Mr. F. S. BOAS, who presided, said that composition must be taken in the broadest sense, as including oral as well as written expression. For the average boy or girl it was at once the most difficult and the most important branch of the English curriculum.—Miss E. A. FORD (Clapham Day Training College) ascribed the inability of most pupils on leaving school to express themselves with ease, fluency, or correctness to the neglect of proper training in the mother tongue. It was taken for granted that a child who knew the facts would have no difficulty in expressing them. He must be taught to do so, and the best instrument in the teacher's hands was literature.—Dr. ROUSE summed up his paper in one sentence, "English composition is the foundation of all other work." Systematic training in school was more needed now than formerly, because teachers now had no help from the home. Children of a former generation used to hear no end of stories from nurse and mother, and, as they grew up, had good literature read aloud to them by their parents. Now they read to themselves nothing but trash and heard nothing but the gramophone.—Mr. GEORGE SAMPSON (Bellenden Road Higher Grade School) commended oral composition. Speech came before writing, and good speech was more likely to produce good writing than good writing was to produce good speech.—Mr. HARTOG (University of London) said the object of composition should be to enable a child to put into words what he himself thought and felt. This granted, it followed that the method recommended by R. L. STEVENSON, "to play the sedulous ape" to great writers was radically wrong. Stevenson himself never showed his full powers till he abandoned his theory in "Weir of Hermiston." The artificial subjects too commonly set for essays by examiners stood self-condemned.—Mr. A. H. D. ACTLAND, in reference to the Report of Examinations issued by the Consultative Committee, of which he was Chairman, invited expressions of opinion on the point raised by Mr. Hartog. Was the teaching of composition injuriously affected by the kind of essay usually demanded in outside examinations?—Miss ALLEN (Homerton Training College) and Dr. ROUSE both answered in the affirmative.—Prof. GOLLANZ reported, as the experience of senior examiners of the University of London, that there had been a marked advance of late years in English composition, and he attributed this improvement to the efforts of the English Association.

THE MATHEMATICAL ASSOCIATION.

THE Annual Meeting of the Mathematical Association was held, on January 10, at the London Day Training College. The President, Prof. E. W. HOBSON, took as the subject of his address "The Democratization of Mathematical Education." By the title he intended not the extension of education to wider classes of the community, but to the progressive adaptation of matter and methods of teaching to meet the needs of those who lacked any exceptional capacity. Democratization in this sense had been more marked and rapid in the teaching of mathematics than of any other subject. The old system which looked on mathematics mainly as disciplinary, the training of faculties which were raw in any boy, stood condemned. It had failed with all except the very elect. The pupil, for instance, was not shown that Euclid had any connexion with the problems of actual space. Thanks mainly to the activity of the Mathematical Association all this had been changed, and the pupil was now introduced to geometry by actual measurements and construction exercises. There was, however, a danger of stopping short with practice.

and neglecting altogether the underlying theory. He suggested that a rudimentary treatment of the idea and processes of the calculus might profitably be introduced in the highest classes of schools.

Mr. C. GODFREY gave some account of the work of the International Commission on Mathematical Teaching. The next meeting of the Commission would be held next August in Cambridge.

Mr. G. ST. L. CARSON urged the extension of the present range of applied mathematics. He believed that it might do for psychology and sociology what the older mathematics had done for the physical sciences.

SAFE NOVELS.

Tante. By ANNE DOUGLAS SEDGWICK (Mrs. Basil de Sélin-court). (6s. Arnold.)

"Tante" is the study of an egoist of genius. Mme Okraska is also a pianist of world-wide reputation, but we are concerned with her profession only as the stage on which she exploits her personality, and as giving occasion to some brilliantly reported scenes from musical life in London at which the artist can afford to smile with the philistine. Mme Okraska is the genius of the story, but the part of heroine is reserved for her adopted daughter, Karen Woodruff, a strong-willed, virtuous young Bohemian, married to a charming philistine who has the misfortune to detest the clay feet of Karen's divinity and to refuse homage. The jealous vengeance of her guardian results in the disillusionment of Karen, partly by experience, partly by the aid of an old weather-beaten American woman (one of the best drawn and most convincing characters in the book) who has seen Mme Okraska into the world, watched over her at every stage of her brilliant and ruthless career, and is alone beside her when the curtain goes down on the discomfited and lonely woman. Mme Okraska is a very clever study, but not altogether satisfactory. Capricious, incense loving, tyrannically selfish as she appears in the first part of the book, she is still a tragic and captivating figure; but as her unmasking proceeds she suffers diminution and loses her charm; the artist disappears, only the malignant and disappointed woman remains, rather too intent on slaughter. Miss Sedgwick is as much wit and critic as artist, and we are inclined to think that her judicial spirit has encroached on her humanity, flattening the key of her original conception. "Tante" abounds in witty comment, vivid description, and often exquisite renderings of superficial aspects of things and people. Within the charmed circle where Miss Sedgwick's sympathies are at home she has drawn some delightful scenes. Her impressions are those of an artist and she never fails to convey them. But we sometimes sigh for greater plainness; constant elaboration cloyes, however skilful. The beauty of such studied simplicity as the following is all too rare. "It was on the morning of her seventh day at Les Solitudes that she met Mr. Drew walking early in the garden. The sea was glistening blue and gold; the air was melancholy in its sweetness; birds whistled."

The Golden Silence. By C. N. and A. M. WILLIAMSON.
(6s. Methuen.)

Victoria Ray is a young American of good family whom Neville Caird meets on her way to Paris, whither she is bound to fulfil an engagement as a *danseuse*. Ten years before her only sister had married Cassim ben Hulim, a captain of the Spahis, and disappeared with him, leaving no trace. The one object of Victoria's life is to find her sister, and, as soon as she has made a nest-egg by dancing, she starts for Algiers in search, accompanied by Caird, who was also on his way to Algiers to visit an old college chum. Victoria in her turn disappears with an insinuating Arab chieftain, who promises to take her to her sister. We will not pursue the plot further, and have only traced it so far to show what scope it affords for descriptions of wanderings in the desert, travel sketches, in which the authors so greatly excel, and in which this time motors play a subordinate part. A siege in a ruined desert castle forms a thrilling climax, but we must confess that this is marred by the reappearance of an outrageously vulgar adventuress, who at starting has entangled the hero into an engagement.

On January 16, at the Guildhall School of Music, Mr. Plunket Greene delivered a lecture for the London Schools Musical and Dramatic Association on "Interpretation in Song." A large part of the audience must have known Mr. Plunket Greene only as an artist, but here they found, besides the artist, the expert critic and exponent of his art. The lecture was delightful, and we need hardly add that the illustrations showed that Mr. Plunket Greene possesses in a high degree the qualifications he deems necessary for the highest interpretation in song. The Association is indeed fortunate in enlisting the services of a musician who so combines theory and practice.

SCOUTING IN SECONDARY SCHOOLS. A NOVEL EXPERIMENT.

THE Boy Scout movement has entered a new epoch. Sir Robert Baden-Powell has given enthusiastic approval to a scheme for the incorporation of scouting into the curriculum of the County Secondary School, Harrow—a new Middlesex school within a bow-shot of the ancient "Harrow," and with a motto that pleases the Chief Scout: "Virtus non stemma." At present there are nearly 200 boys; soon there will be 300. Unless his parents have conscientious objections every boy will become a member of the scout organization. Scoutmaster and schoolmaster bid fair to be synonymous. Mr. Ernest Young, F.R.G.S., a traveller of repute, is head master. He sees the educational possibilities of scouting. Out of forty branches of handicraft for which scout badges and promotions are given, a score are directly allied with school subjects. Mr. Young intends that the teaching shall lead up to these promotion tests. He further points out that the playing fields will allow of only four football teams—44 boys out of 300. Scouting will provide a means to engage the leisure time of the remainder. Surveying is already taught in the school; each Form has so much of its time allotted to the subject. It will now proceed along scouting lines.

The scheme includes a camp on the school fields throughout the summer term. Patrols from the various forms will have charge for a week in turn. All tents, camp equipment, and other apparatus are to be supplied by the school. "There are no subscriptions to pay," says the head master in a circular to the parents, "and the uniform (total cost 12s.) can be bought in instalments as required. The meetings will chiefly be on half holidays (apart from the time given out of actual school hours); there will be no night work for younger boys and very little for the older. Any parent is at liberty to withdraw his son from exercises of a military character."

Sir R. Baden-Powell recently addressed a private meeting of parents connected with the school. Practically every boy has been enrolled as a result. The Chief Scout believes that the success of the scheme will multiply the Scout movement perhaps an hundredfold. "I want the whole of my school," says the Head Master, "to be in the Scout brotherhood, because of the moral influence, the greatest a layman can get hold of. Scouting is the Sermon on the Mount interpreted for schoolboys."

CORRESPONDENCE.

A DEBATE ON TRAINING.

To the Editor of the Journal of Education.

DEAR SIR,—Would you allow me to draw attention, through your columns, to the meeting which the Education Society of the Teachers' Guild is holding on Monday, February 12, at 8 o'clock, at 74 Gower Street, to discuss "The Present System of Training Secondary Teachers"? I wish to invite to it specially the correspondents who wrote letters on the subject in your November and December issues. I think that many teachers who have watched the progress of training may have valuable suggestion and criticism to offer, and that our meeting may be able to add to the collection of opinion which the report of the Training of Teachers' Committee recently published.—Yours truly,

JESSIE WHITE,

Hon. Sec., Education Society, Teachers' Guild.
74 Gower Street, London, W.C.

THE ART OF VOICE TRAINING.—To Miss Elsie Fogerty's initiative is due the important Conference of doctors and teachers held last month at Bedford College. Prof. Adams, in his Introductory Address, contrasted the old elocutionist with the ideal teacher of speech training. The "professor" of elocution was too commonly a broken-down actor whose strength, like that of Samson, lay in the length of his hair, or a scientist whose whole knowledge of the voice had been gained in the dissecting room. The teacher of the future would be at once a physiologist, a phonetician, an artist, and a man of literary culture, or at least he must be in close touch with the sciences and arts on which his own profession depended. So only could we hope for a revival of the lost arts of reading aloud and diction.

MESSRS. BELL'S NEW EDUCATIONAL BOOKS.

Crown 8vo. 2s. 6d. Now Ready.

ADVANCED ENGLISH GRAMMAR THROUGH COMPOSITION.

By JOHN D. ROSE, M.A., Rector of the Kirkcaldy High School.

The present book completes a course of English Grammar for schools according to the methods laid down in the *Elementary English Grammar Through Composition*, by the same author. The title explains the object in view. It is to treat Grammar, not as an end in itself, divorced from immediate utility, but as arising out of everyday forms of speech, and as giving practical help in their mastery and in the completeness of their study.

CIVIL SERVICE EXAMINATION PAPERS.

Edited by H. N. ADAIR, M.A., Senior French Master at the Strand School, King's College, London.

This new series is intended primarily for the use of candidates for the Middle Grades of the Civil Service.

First Volume. Now Ready. Crown 8vo, 1s. 6d.

FRENCH COMPOSITION.

Consisting of Pieces set at Civil Service Examinations. Reprinted by permission of H.M. Stationery Office, and Edited, with Brief Notes, by H. N. ADAIR, M.A.

CONTENTS.—Second Division Examination Papers: Admiralty, &c., Papers—Military Entrance Examinations: Woolwich and Sandhurst—Assistant in the British Museum—Examinations for Student Interpreters—Class I.—Notes.

Ready Immediately. Crown 8vo, 1s.

GRAMMAIRE PRATIQUE.

Being a Grammatical Supplement to *Le Français de France*. By Mme VALETTE VERNET.

CONTES D'HIER ET D'AUJOURD'HUI.

Edited by J. S. NORMAN, M.A., Head Master of the New Beacon School, Sevenoaks; and M. CHARLES ROBERT DUMAS, Professeur au Collège de St. Germain-en-Laye. Crown 8vo, Illustrated, 1s. 6d.

This book contains a selection of stories adapted from Rabelais, Perrault, and other well known writers. The volume is intended for second-year pupils, and contains a Questionnaire and very full Notes, as well as Biographical Notices of the different authors. The editors are firm believers in the "Direct Method" of teaching modern languages, and the book has been prepared in full sympathy with that movement.

CONTES FRANÇAIS.

ANCIENS ET MODERNES.

Edited, with Introduction, Brief Notes, and Vocabularies, by MARC CÉPHI, Whitgift Grammar School, Croydon. Fcap. 8vo, with or without Vocabulary, 1s. 6d.

This volume, as its name implies, is a collection of interesting stories taken from various French sources. The simplicity and the constant repetition of new words and phrases are the main features of the book.

The book will be supplied with or without a Vocabulary, while Exercises and questionnaires, based on every other story, will be provided in a separate booklet for those who may use them, 6d.

GEOMETRY FOR SCHOOLS.

By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A.

Now Ready:—Vol. I.—Covering Stages I and II of the Board of Education Circular, No. 711, 1909. 1s.

Vol. II.—Properties of Triangles and Parallelograms. 1s. 6d.

Vol. III.—Area. 1s.

Ready shortly:—Vol. IV (Circles). Vol. V (Proportions). Vol. VI (Solids).

Vols. II to VI cover Stage III of the Board of Education Circular.

EASY LATIN PLAYS.

By M. L. NEWMAN, High School for Girls, Sheffield.

Crown 8vo. Sewed, 6d.

Of the two plays which are included in this volume, "Mater Græchorum" was pushed at the request of teachers who attended the Summer School of 1907 at London. The play was written to serve as a reading book for an Easy Latin Form during the second and third terms of the year in which Latin was begun.

BELL'S

SIMPLIFIED LATIN CLASSICS.

Edited, with Notes, Exercises, and Vocabulary, by S. E. WINBOLT, M.A. Crown 8vo. With numerous illustrations. 1s. 6d. each.

New Volumes. Ready immediately.

Virgil's *Athletic Sports*. | Virgil's *Taking of Troy*.

MACMILLAN & CO.'S NEW BOOKS.

Floreat Etona. Anecdotes and Memories of Eton College. By RALPH NEVILL. With many Coloured and other Illustrations. 8vo, 15s. net.

A Geography of the World. By B.-C. WALLIS, B.Sc. (Lond.), F.R.G.S. Illustrated. 3s. 6d. [Macmillan's Practical Modern Geographies]

THE GUARDIAN.—"This presents a fine picture, clearly correlated in its details, showing generally how the economic balance of the world is maintained and its relation to physical and ethical conditions. Figures are given freely: in fact, this is a point upon which the author lays stress. It is a book for upper forms, and may be cordially commended in this view."

Latin Translation for Public School Scholarships. By BASIL DALTON, M.A., sometime Scholar of Rugby School. 2s. 6d.

THE PREPARATORY SCHOOLS REVIEW.—"This little book is admirably adapted to its purpose, and will prove most useful to all schoolmasters engaged in preparing boys to translate into idiomatic English. . . . The notes are a model of good teaching, not overloaded in a single instance, and full of useful hints."

The Roman Conquest of Britain. A Fourth Form Reading Book adapted from the Text of Tacitus. With Map, Introduction, Notes, and Vocabulary by WILLIAM MODFEN, M.A. Illustrated. 1s. 6d. [Elementary Classics]

A Book of English Prose, 1470-1900. Selected by J. H. FOWLER, M.A. 3s. 6d.

THE GUARDIAN.—"Such a book was much needed, as compilers of works of this kind have tended to move altogether in grooves from which a decided departure has become necessary: and Mr. Fowler is to be complimented accordingly on the way in which he has done his work."

Easy Parsing and Analysis for the Lower Classes in Secondary Schools. By J. C. NESFIELD, M.A. Limp cloth, 1s. KEY, 2s. net. *Just published.*

THE SCHOOL GUARDIAN.—"For its purpose it is one of the very best that we have seen or expect to see."

MADAME BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1895, with the view of training educated women as Teachers of Scientific Physical Education. The Course of Training conducted by a large and experienced staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studios, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnasium, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS.

Messrs. Frost & Shipman, Perth, W.A. :

"We beg to acknowledge receipt of your new List of Schools, which we have very much pleasure in thanking you for. It seems to us to be a very fine and valuable work, and we shall certainly try and make use of it by the means you indicate, and shall be very pleased to forward your interests in any way. We might say that we are Medical Agents also out here, which brings us in touch very much with the Medical Profession, and in this case your book ought to be very useful."

The Attorney-General for Antigua, W.I. :

"It is a most interesting work, and I shall gladly place it at the service of my friends with young sons."

The Superintendent of Methodist Schools, St. John's, Newfoundland :

"It is a very nicely bound volume, with numerous illustrations, and replete with information. I shall be delighted to furnish needed information to any parents whom I know to be desirous of sending their children to an English School."

The Bishop of Belize, British Honduras :

"Many thanks for sending your List of Schools and Tutors, 1911. It will be a useful reference book when I am consulted by parents who wish to send their children to school in England; it contains a vast amount of valuable information about English Schools not to be found elsewhere."

Messrs. J. & W. Pitts, Merchants, St. John's, Newfoundland :

"I am looking over your book with great interest, and shall take pleasure in placing it in the hands of friends who are contemplating sending their children to English Schools."

The Chief Justice of Malta :

"Your new List of Schools certainly contains very valuable information, which I shall make it a point to communicate to any of my friends who may be inclined to send their children to England for education."

The Bishop of Ontario :

"Many thanks for the copy of your new List of Schools. It is interesting and may be useful, as I am *often asked* to recommend an English School."

The Royal Mail Steam Packet Co., Grenada :

"We are in receipt of the copy of new List of Schools, and shall have much pleasure in submitting same to clients of ours who are sending their children to school in England."

The Librarian of the Legislative Library, Victoria, B.C. :

"I wish to thank you for your courtesy in presenting to the Provincial Library of British Columbia a copy of your List of Schools. I need scarcely assure you that the volume will be carefully preserved on our shelves for future reference."

The Bishop of Ballarat :

"I have found your List of Schools interesting, and should I meet parties anxious for the useful information it contains, I shall feel it a pleasure and a duty to communicate it."

The Government Agency, Northern Province, Ceylon :

"In acknowledging receipt of the 1911 List of Schools, I have the honour to state that I will place the book in the Town Library, where it will be accessible to all."

Member of the House of Representatives, Sydney :

"I acknowledge, with pleasure, the receipt of this year's List of Schools. The book is a valuable one, containing information which will prove valuable to every reader. I shall be pleased to place same before many Australian parents to peruse this splendid edition."

The Librarian, Government Library, Pretoria :

"Many thanks for the presentation copy of List of Schools. It is an admirable compilation, and we are especially glad of it owing to the *large number* of enquiries we have *re* suitable English Schools. Please charge us for next year's issue."

The Provincial Commissioner, Central Province, Warri, Southern Nigeria :

"I am very pleased to accept the copy of your new List of Schools, and have to thank you for same. No doubt the information will prove of service as well as interest to officers serving in this Province who have families at home."

The Senior Puisne Judge, Penang, Straits Settlements :

"I have to thank you for the handsome volume containing a List of Schools. I have transferred it to our Library here, where parents having children to be educated will be most likely to see it."

FIFTEENTH EDITION NOW PREPARING. For particulars apply to

J. & J. PATON, 143 Cannon Street, LONDON, E.C.

Messrs. LONGMANS & CO.'S SCHOOL BOOKS.

By **BENJAMIN HALL KENNEDY, D.D.**, Late Regius Professor of Greek in the University of Cambridge.

MR. MURRAY'S NEW BOOKS.

ANTE LIMEN.

A New Latin Book for Younger Beginners, based upon LIMEN. Compiled, under the Guidance of Professors WALTERS and CONWAY, by Miss R. H. REES, B.A. 1s. 6d.

ANTE LIMEN has been written in response to requests received from teachers who are using *LIMEN* and approve of its methods, but desire as well a book suitable for younger beginners. The lines of the parent book have been closely followed, though the arrangement is different: the Reading lessons, Exercises, and Vocabularies have been arranged in three parallel divisions. The oral method is employed from the start, and the simple nature of the earliest questions ought to disarm any teacher who is diffident about his powers of using it.

A KEY TO ANTE LIMEN has been published, and may be obtained by authenticated teachers. Price 2s. 8d. post free.

LIMEN: A FIRST LATIN BOOK.

By W. C. F. WALTERS, M.A., Professor of Classical Literature in King's College, London; and R. S. CONWAY, Litt.D., Professor of Latin in the University of Manchester. Third Revised Edition. 2s. 6d. Also in Two Parts, 1s. 6d. each.

A KEY TO LIMEN has been published, and may be obtained by authenticated teachers. Price 2s. 8d. post free.

LIMEN is now in its third large edition. The publisher has been in correspondence with some hundreds of teachers, and no one who has given it a trial has reported otherwise than favourably on the results obtained by its use in class: it will be admitted that this is notable evidence of the soundness of the lines of the book.

A New Work by C. R. L. FLETCHER.

THE MAKING OF WESTERN EUROPE.

Being an attempt to trace the fortunes of the Children of the Roman Empire. By C. R. L. FLETCHER, sometime Fellow of All Souls and Magdalen Colleges, Oxford. With Maps. Demy 8vo. *The Dark Ages.* 300-1000 A.D. 7s. 6d. net.

ELEMENTARY GEOMETRY.

By A. E. LAYNG, M.A., late Head Master of Stafford Grammar School. Complete, 3s. 6d. Also in parts.

As regards the fundamental part, this book follows the lines indicated in the Circular on the Teaching of Geometry issued by the Board of Education in 1909.

The Theorems and Constructions enunciated in the Syllabus on Elementary Geometry issued by Cambridge University constitute the "book-work."

The order in which theorems are placed has been chosen with the view of grouping together, as far as possible, closely allied theorems: for instance, the three fundamental theorems relating to congruent triangles. Among the exercises are included nearly all the questions set in the Cambridge Local Examinations during the last eight years.

THE ROMANCE OF WORDS.

By ERNEST WEEKLEY, M.A., Professor of French and Head of the Modern Language Department at University College, Nottingham.

This work deals in a popular fashion with the latest results of modern philology. Special attention is given to the unexpected in the history of words, and, while demolishing several of the fables which are usually found in works on etymology, it shows that in word life, as in human life, truth is stranger than fiction.

LEAGUE OF THE EMPIRE TEXT-BOOKS.

Edited by Professor A. F. POLLARD, M.A.

THE STORY OF THE EMPIRE.

By GERALD T. HANKIN, B.A., Assistant Master at King's College School. With Maps and Illustrations. 2s. 6d. *For Middle Forms.*

THE BRITISH EMPIRE AND ITS HISTORY.

By E. G. HAWKE, M.A., Examiner in History to the University of London. With Illustrations. 3s. 6d. *For Upper Forms.*

LECTURES SCOLAIRES.

Edited by W. MANSFIELD POOLE, M.A., Head of the Modern Language Department, Royal Naval College, Osborne; and E. L. LASSIMONNE, Officier de l'Instruction Publique, Senior Master, Royal Naval College, Osborne.

This new series of reading books, divided into three grades, consists for the most part of new and interesting stories hitherto unpublished in England, and specially written for the young by the best French authors.

One of the chief features of the books is that the questions are facing the text. These questions are divided into two parts, the first being questions on the meaning, while the remainder deal with the grammar of the page facing them. Both the questions and the notes at the end of the book are written entirely in French.

"... have proved themselves trustworthy adjuncts to the teaching of French, and we welcome the newest additions."—SECONDARY SCHOOL JOURNAL.

Série Élémentaire. 1s. each.

For Preparatory Schools and the Lower Forms of a Public School (ages 11 to 13).

***Guillaume le Tisserand.** ALBERT WOLFF.

Le Chêne Parlant. GEORGE SAND.

La Souris Blanche. HÉGESIPPE MOREAU.

Les Voisins de Campagne. HENRI MONNIER.

Série Intermédiaire. 1s. 6d. each.

For the Top Form of a Preparatory School and Middle Forms of a Public School (ages 13 to 15). For the following Exams.:—Navy, Oxford and Cambridge Junior Locals, Public School Scholarships, &c.

Ce Gredin de Pritohard! Anecdotes Extraites de "L'Histoire des mes Bêtes." ALEXANDRE DUMAS (Père).

Un Aiglon. Anecdote Extraite de "La Cape et l'Épée." AMÉDÉE ACHARD.

***Le Parchemin du Docteur Maure et l'Oncle d'Amérique.** ÉMILE SOUVESTRE.

Série Supérieure. 1s. 6d. each.

For the Higher Forms of a Public School (ages 15 to 17.) For the following Exams.:—Oxford and Cambridge Senior Locals, Sandhurst, Woolwich, London Matriculation, &c.

Le Mouron Rouge. Adapté de l'Anglais de Madame la BARONNE ORCZY.

Martin Paz. JULES VERNE.

Noiraud, Guignol et Deux Cyclones. LUDOVIC HALÉVY.

* Both the texts and the questions in these books are easier than the others of the series to which they belong.

TEXTES ET QUESTIONS.

By W. M. POOLE, M.A., and E. L. LASSIMONNE.

I.—Classes Élémentaires. 1s. 6d.

II.—Classes Avancées. 2s. 6d.

These books are on the same plan as *Lectures Scolaires*, but, instead of complete stories, they consist of detached anecdotes of an instructive and interesting character, carefully graduated in difficulty.

OCCASIONAL NOTES.

THE *Times* tells us that Mr. C. Montague Barlow will shortly introduce an Amending Bill into the House of Commons designed to remove the disabilities under which certain secondary schools suffer with regard to the receipt of Government grants. The regulations of the Board exclude from participation in grants secondary schools which give religious instruction save on the written demand of parents; schools which require a religious qualification for teachers or trustees; and schools in which the majority of the governors are not chosen from elected authorities. Mr. Barlow's Bill would remove these disabilities. It is backed by Lord Robert Cecil, Mr. Alfred Cripps, and others. In elementary schools no discrimination is made between denominational and council schools; and the same principle may well be applied in the secondary sphere. But the present temper of the House of Commons is opposed to the financial support of denominational schools, so that the Bill has little chance of becoming law.

IN our February number we announced the decision to form a society for the insurance of teachers engaged in various branches of education. This decision was arrived at by representatives of the Associations of Assistant Masters, Assistant Mistresses, University Women Teachers, Teachers in Technical Institutes, and the Teacher's Guild. [We regret that the Association of University Women Teachers was inadvertently omitted in our former notice.] The societies enumerated repre-

sent together the interests of about 12,000 teachers engaged otherwise than in elementary schools. Numerous promises of support have been already received, and meetings in different parts of the country to make the scheme known have been already arranged. The Society ought to be exceptionally strong, as it will evidently be able to offer exceptional benefits, inasmuch as the teaching profession has a magnificent health record, and at present secondary schools are mainly staffed with men and women in the prime of life. We feel confident that the new society can be recommended from a business point of view; and, incidentally, it will prove of no little service in developing an increased sense of professional fellowship, for it will unite a large number of individuals, including teachers in private families and in proprietary schools, for the purpose of mutual help in sickness and old age. It is the idea of the promoters that a very catholic interpretation should be given to the words, "Secondary and University Teachers." Mr. E. A. Tidswell, 9 Glaslyn Road, Crouch End, London, N., is acting as honorary secretary.

MR. F. H. COLSON, in the last *Times Educational Supplement*, defends the Cambridge Locals as sufficient for the needs of schools, and on this ground condemns the examination scheme of Consultative Board as supererogatory. As a schoolmaster of long experience, both as Assistant and Head, Mr. Colson is a weighty witness; and we can quite believe that in the schools where he has served the teachers have not been tempted "to play at hide and seek" with the examiners, and that the Locals have been used to gauge the standard of a form's work from year to year. But we should like to know the proportion of schools in which a whole form is sent in, and whether Mr. Colson considers that the number of passes and distinctions obtained is any test of the comparative merits of schools. And we doubt whether the Cambridge Syndicate will welcome their advocate, for the reforms he desires would reduce by half the number of entries. He would prohibit the publication of "results" for advertisement purposes; he would not allow the examinations to be used "sporadically," and he considers the limit of age prescribed by the Board of Education for presenting pupils for an external examination—"not under fifteen"—too low.

WHEN the Bishop of Durham declines to sanction the proposal of the Senate of Durham University to admit Nonconformists to Divinity degrees, he is clearly dying in the last ditch. At Oxford, as an Oxford correspondent of the *Times* reports, such a proposal would undoubtedly be carried by Convocation if it were not for out-voters. During the last twenty years thirty-nine members of Mansfield College have taken University prizes in theology, and the same College has obtained nine first classes in the theological school, yet none of these men can take theological degrees, however distinguished. The anomaly affects a comparatively small number, but it enforces the conclusion to which the recent vote on the question of compulsory Greek led us, that the Government is bound before long to take measures for reforming the constitution of Oxford and Cambridge.

ON the Education Committee of the London County Council a cheese-paring policy is still in the ascendant. The reduction in the size of classes proceeds

**Penny-Wisdom
of L.C.C.**

at the rate of less than 1 per cent. per annum, and, as Mr. Gautrey warned the Committee, unless the pace was quickened, they stood in danger of incurring another £10,000 fine by the Board of Education. Miss Wallas and Miss Adler pleaded in vain for an additional £500 for the scheme of dental treatment, and a motion to increase by the same amount the grant for nursing treatment was likewise rejected.

MR. PATON is often picturesque in his language.

If education be likened to a pair of shoes, then it is clearly not right that two feet should live in one pair of shoes, and not know each other all the time. "It does not conduce to progress when the right foot does not know what the left foot is doing, and the left foot does not care in which direction the right foot is going." The two feet are, of course, the elementary and secondary branches of education. In Manchester Mr. Paton has done something to keep the movements of the two feet in accord by accepting the presidency of the Manchester Association of the National Union of Teachers. In his presidential address Mr. Paton said: "We are all teachers. We are working for the same end, on the same material, in the hope of the same harvest. As such we cannot know too much of each other." Most teachers in both branches of the profession will endorse this expression of feeling, though the Head Masters' Conference may complain that Mr. Paton has declined to put the right foot into the right shoe.

**A Pair of
Shoes.**

THE sum needed (£100,000) for the building, equipment, and endowment of Queen Mary's Hostel has been subscribed; and this most important scheme for the education of women in the science of the household is assured a successful future.

**Queen Mary's
Hostel.**

The object of the scheme is not merely to provide an outlet for the energies of women with scientific proclivities, nor merely to train teachers of domestic economy. It strikes far deeper. A scientific age has long been shocked at the persistence in the home of unscientific methods of cooking, cleaning, and nursing. Many efforts have been made to bring scientific knowledge home to the domestic worker and organizer. In the words of a circular issued by the promoters, "the object is to foster a sounder knowledge of the laws which govern health, sanitation, and household economy. The moral and physical welfare of our country depends primarily on the training and healthy upbringing of its children." It is hoped to raise the whole standard of home life and to substitute trained experience for instinct and tradition, "which have hitherto been the chief guides for mothers."

ALMOST simultaneously with the announcement that the sum of £100,000 had been subscribed for Queen Mary's Hostel comes the news that a like sum has been raised by the authorities of Bedford College. This is good hearing, and the building of the new College will

**Bedford
College.**

go ahead with greater confidence and security. It is more than sixty years since Bedford College opened its, at that time, very humble doors. There are now, we

believe, upwards of three hundred students, and inevitably the number will increase with increased accommodation. But, if girls are to have the same opportunities as boys, there is still one thing lacking. Hardly an old endowed secondary school but has its valuable scholarships to the Universities. Such helps to study are largely to seek in secondary schools for girls. Here is an opportunity for men of wealth who wish to serve their country. Girls' schools need funds for scholarships, in order that no pupil capable of profiting by a University education should be debarred by poverty from doing so.

DR. CLIFFORD'S criticisms upon Cardinal Bourne's speech have produced a letter in the *Times* from Mr. W. S. Lilly which indirectly raises a point of great

**The Rights
of the Father.**

importance. Mr. Lilly says that "the Catholic Church has always most emphatically recognized the right and duty of the father to determine and direct the religious education of his children." The law of England, he adds, is precisely that of the Catholic Church, and he quotes Lord O'Hagan as follows: "The authority of the father to guide and govern the education of his children is a very sacred thing, bestowed by the Almighty." The point to which we wish to direct attention is this: the Catholic Church, as it appears, and also the law of the country, assign to the father the right of control over the education of his children. There are cases where the mother and the father do not agree as to the education, religious or otherwise, suitable for the children. In these cases the law ignores the mother, and apparently the Catholic Church does the same.

FROM advertisements in the newspapers we gather that a large number of appointments under the new Insurance Act will be offered to men and women.

**Equal Salaries
for Men and
Women.**

The salaries offered to men clerks range from £60 to £150. Men managers begin at £150 and may rise to £300. The salaries offered to women clerks range from £60 to £150. Women managers begin at £150 and may rise to £300. These facts are very significant. Whoever are responsible for them deserve congratulations both for their sound views of economics and for their recognition of woman's claim to equal pay for equal work. If the work can be done equally well by either men or women, then the pay should be equal. If men can do the work better, then men will get the appointments. Employers by using the services of women merely because they are cheaper, often bring it about that the man tramps the streets looking for work, the children are neglected, and the house is maintained on the meagre earnings of the wife.

IN the educational world there is still a considerable disproportion between the earnings of men and women. A few authorities—e.g. the London County Council and the Central Welsh Board—

**The Cheaper
Woman.**

make no distinction in payment between men and women Inspectors and examiners. The inequality of payment in the case of men and women Inspectors under the Board of Education is most marked. No doubt it is the Treasury that exercises the power, but we hope that before long the Board will be able to convince the Treasury of the need of equitable treatment for men and women Inspectors. In schools there is a distinct, but slow, movement towards making

the salaries of men and women teachers the same. The reason why women are expected to accept lower salaries is part and parcel of the tradition that, as girls will earn little or no money after leaving school, therefore the parents cannot afford to pay such high fees as they do for the boys. But the tradition is breaking down in two directions. Lower fees in girls' schools are becoming less common, and girls on leaving school are showing their aptitude for earning money, and therefore justifying the parental outlay.

A LARGE number of boys' secondary schools are endowed with valuable scholarships to the Universities. The endowments and the phrase, "the Universities," date back to a time when there were but two Universities that counted in England. The pious founder no doubt wished to give to promising boys, not rich in this world's gear, an opportunity of further education of a University type. The limitation to Oxford and Cambridge was an accident. The newer Universities are beginning to realize that this limitation bears hardly on them. The Convocation of Manchester University have passed a resolution asking the University Court to take steps to widen the choice of Universities for scholarship boys. There are two obvious arguments in favour of such a course. The money was left, not especially for the benefit of the two older Universities, but for the sake of the boys. And, as the range of human knowledge and inquiry widens, it becomes impossible for any one University to provide for all faculties. Boys may well be given the freedom to choose the University which provides the course of study they desire.

MME MONTESSORI, herself a physician of note, has pursued the inquiries of Seguin and others, and has developed a system of education, applicable to the early years of childhood, apparently so complete that it can be introduced into schools in its entirety. In June of last year, as we learn from a most interesting article in *The World's Work*, a law was passed in Switzerland establishing the Montessori system in all the schools of the country. The system appears to be based, both by Mme Montessori and her predecessors, upon the study of abnormal children. But in practice it has been found suitable for those who are intelligent. The primary object is to put the child in an atmosphere in which there is no restraint and nothing to make him perverse or self-conscious, in order that his personality may be liberated and may have free play. The child is watched rather than taught, and his "good" movements encouraged; while the "evil" ones are carefully repressed.

MME MONTESSORI is not alone in her efforts to bring the researches of medical science to the help of the teacher. Miss Margaret McMillan has written to the same end, and in many Kindergartens to-day the skilled teacher understands that the child must be watched and given opportunity to find himself. One special feature of the system is the sense-training, the aim of which is to give the child control of his muscles and nerves, and to enable him to accommodate himself to his surroundings. Mme Montessori is a woman of exceptional sympathy, patience, and power, and she

may probably take rank with Froebel and Pestalozzi; but no individual, however gifted, can transform all schools by the issue of a system. The spirit is the main thing; and it is the sympathetic spirit that is needed to decide what instinctive movements are "good" and what are "evil." At the same time, it may frankly be admitted that in England we have false values and standards. To an English teacher "goodness" in school often means immobility and passivity.

A SHORT time ago a body of teachers in elementary schools put forward to their Authority a suggestion that there should be a holiday of a week, or at least of a few days, about the end of October. The suggestion was based on the statement that both children and teachers became jaded towards the end of the term, when no daylight hours were left for play after school. It is certainly hard on children that they should be in school during all the daylight hours in winter. The term of nearly four months is a long one, and it is not broken by any public holidays or by any Sunday-school treats and the like. A short holiday might be a very good thing, for it is the monotony of school life that wearies, when continued without a break for several months, in probably gloomy weather. The lay mind on the Education Committee says at once that, with Saturdays and Sundays free, the teachers and children alike cannot become fagged. But experience shows that they do.

THE desire for a break in the regularity of a long term is reasonable and healthy. We venture, in all seriousness, to suggest a way in which the break might be secured without asking the managers to grant a holiday. The permission both of the Managers and of the Inspector for the district would be needed, but, we are sure, would not be withheld, if a careful scheme on the lines we are about to propose were drawn up. The proposal is that about the end of October, the precise date to depend upon the advent of fine weather, which may be looked for at that time of the year, the school should have a play-week. The regular timetable would be suspended, and so a welcome change from the regularity would result. During this week the children should be in the open air as much as possible. More morris-dancing and games in the playground; more Nature-study walks; visits to places of interest; simple measurements in playground or neighbourhood, leading to the drawing of plans; woodwork, modelling, singing, reading, and dramatic performances. The scheme is worth a trial.

LOCAL AUTHORITIES.

IN reference to our article in February, "Work on the Land in a Secondary School," Mr. R. E. Owen, Head Master of the County Secondary School, Welshpool, writes to us to point out that our list of the subjects taught on the Agricultural Side of the school was incomplete. The report we had before us at the time of writing gave the subjects that were either directly agricultural or which could be presented with an agricultural bias. In addition to these, other subjects are not neglected. All boys take history, most take French, and half take Latin. Mr. Owen says: "I have all

along taken the view that this school is not an agricultural school, but a secondary school giving an all-round secondary education. . . . I am absolutely sure [he adds] that the curriculum can claim to be well balanced: not a single subject has suffered or been dropped."

Suitable School Prizes. THE London County Council have often suffered criticism with regard to the books that they include or exclude for the use of schools. Perhaps no list could be drawn up that would satisfy all critics. But the criticism to which we refer is commonly based upon insufficient information. In one recent case the inaccuracy has been promptly exposed. Lady Edward Cecil, in a letter to the *Times*, states that "the Education Committee of the L.C.C. decided no longer to give as prizes 'Grimm's Fairy Tales.'" Major Levita, Chairman of the Books and Apparatus Committee, writes to say that there are fourteen editions of Grimm's "Tales" on the day school list, and that 1,510 copies were given as prizes during the past year. The Committee were offered a fifteenth edition by a publisher and rejected it, not because they disapproved of Grimm, but because they already had fourteen editions on the list.

The Poverty Test for Scholarships. THE Surrey Education Committee have introduced some important modifications into their Scholarship Regulations. They have decided that, before awarding any scholarship or exhibition, the Committee may ask the parent of any candidate to furnish evidence that he is unable to provide for the continued education of his child. This power is perhaps rendered necessary by a subsequent regulation which throws open the Major Scholarships to any children of Surrey parents, whether or not they are attending a secondary school in the county. The competitors for these scholarships may now be expected to include pupils who are being educated at some of the great public boarding schools. In the case of Junior Scholarships the Higher Education Committee propose to limit the value to the school fees and, where necessary, travelling expenses and dinner money. The Education Committee, in accepting the limitation, have suggested to the Higher Education Committee that a certain number of maintenance grants should be made to Junior Scholars.

Fresh Air and Infection. DR. SADLER's report on the Elementary Schools of Guernsey has now been issued. The fuller report, dealing with the whole education of the island, will, we understand, be issued shortly. Inspectors often hesitate to speak about the need of open windows. It is impossible to avoid the feeling that in making a criticism on this matter the Inspector is viewed as a somewhat insulting faddist. Dr. Sadler knows how to phrase his remarks courteously. What he says about ventilation would apply to a large number of schools throughout the country. "If I may touch on a rather delicate subject," he says, "I would venture to ask the attention of teachers to the importance of keeping the windows open in school-rooms during lessons, as well as of securing a strong draught of air through the rooms at each time of recess. . . . This practice of keeping the windows open (when the first inconveniences of it have been overcome) has a marked effect upon the health of the school and lessens the risk of the spread of infectious disease among the children. The beneficial effects upon the teachers' health are also noticeable."

Bookish Nature Study. IN the report of the Leicestershire Education Committee we find the following remark in reference to Nature study lessons: "I have still to report, however, that the scheme of instruction in many schools is too limited, consisting of little more than an oral lesson (often very bookish), with a little drawing in pencil or colour. The observational side of the work is weak, and the scheme generally of little educational value. This is largely due to want of training on the part of the teacher." Not long ago an Inspector heard a first lesson on birds given to young children. When the lesson was over he ascertained that the bird chosen by the teacher had never been seen by any of the children; that it was not a native of the country-side; and that the teacher had chosen it "because it was in the book." The teacher's error was, of course, due to want of thought, and partly perhaps to her want of skill in adapting the book lesson to an object within the experience of the children. But such lessons, and they are frequent, have no value.

Agriculture in Secondary Schools. THE development of the scientific study of agriculture and the widening of its area of influence during recent years are alike remarkable. In these columns we have often referred to the work done in this direction by the county of Wiltshire. From the

recent report of the county we make a quotation in order to indicate that interest in instruction based on the land is permeating secondary schools. The Principal of the Royal Agricultural College, Cirencester, writes as follows: "I beg to report that the six secondary head masters from Wiltshire have diligently pursued and duly profited by the instruction in agriculture and allied subjects [at the Teachers' Summer Course] and that they all passed the examination. . . . I should like to express my great appreciation of the way in which the Wiltshire Agricultural Education Committee have supported this pioneer effort, which is likely to have far-reaching effects in the future on the trend of agricultural education." We may expect a definite modification of curriculum in some of the secondary schools of Wiltshire.

Legal Costs. THE costliness of legal proceedings was exemplified in a recent case in which a teacher sued a County Authority for three months' salary in lieu of notice of dismissal. The amount in dispute was £27. 10s. The plaintiff gained his case and was awarded the amount in addition to costs. His solicitor's taxed costs amounted to £281; the taxed costs of the defendants were £345. The authority were thus called upon to pay a sum of over £650. No wonder the private person is shy of the law courts. Simplification and cheapening of procedure would be of great advantage in cases of dispute.

SCIENCE NOTES.

An Historical Note. THE history of scientific discoveries, especially of the earlier fundamental observations, is a matter of special interest to teachers, who can often gain therefrom a clue to the best path of exposition. Hence no apology is needed for repeating a quotation from Newton's "Opticks," to which attention has recently been drawn. It relates to the device for obtaining a pure spectrum, usually attributed to Wollaston, by use of a narrow slit and a focusing lens. Newton first used a circular hole and triangular prism, as is usually stated. He next (see "Opticks," Exp. 11) focused the image of the hole on a sheet of white paper, and clearly understood the gain in purity of the colours, for he says that when the lens was thus used "in this case the circular images of the hole which comprise that image . . . were terminated most distinctly without any penumbra, and therefore extended into one another the least that they could, and, by consequence, the mixture of the heterogeneous rays was now least of all." The next improvement was the introduction of the slit, which he adopted between the years 1666 and 1672, whereas Wollaston invented it in 1802. For a little further on in "Opticks" we read: "Yet, instead of the circular hole F, 'tis better to substitute an oblong hole shaped like a long parallelogram with its length parallel to the prism. For, if this hole be an inch or two long, and but a tenth or twentieth part of an inch broad or narrower, the light of the image will be as simple as before or simpler, and the image will become much broader, and therefore more fit to have experiments tried in its light than before." We think some of our readers will like to introduce the study of the spectrum precisely in this historic manner. It may be mentioned, by the way, that a white cloud is the most convenient source of sunlight.

Dissipation or Saturnalia? THE sensational transatlantic message relevant to the threatened "dissipation" of Saturn's ring has received an explanation which is not without its humorous aspect. For some years past Prof. Todd, of Amherst College, New York, has been attempting to resolve (in the optical sense) the rings of Saturn. Believing that at length he had achieved his ambition and had actually observed the component particles discretely, he announced the achievement in a Latin sentence containing the phrase, "quam oculorum dissipationem annuli esse interpretatus sum." The daily press failed to interpret "oculorum dissipationem" according to the author's intent—viz., "optical resolution."

Reading as a means of Study. SIR J. J. THOMSON complained of the neglect of reading and the too great dependence on oral tuition. This complaint was the outcome of his Cambridge experience. We wonder what he would say if he had to teach evening classes in our technical colleges, where the majority of students are literally unable to read—i.e. to read in the sense of studying a book or memoir. So long as classes of sixty or more exist, it is difficult to cure this state of

affairs; but it is surely one of the most important duties of a school to give to its pupils the power as well as the will to acquire knowledge by reading. With smaller classes this task must no longer be neglected, or scientific and technical education cannot develop. We are glad to hear that "reading" will form an important subject for discussion at the next meeting of the British Association.

THE topic to which we have just referred is closely related to another work undertaken by a Committee of Section L. We refer to the promised investigation of the influence of school books upon the eyesight of their young readers. We hope the Committee will ban glazed paper for school books, as it is seriously prejudicial to eyesight and has been condemned by every writer on the subject. Science books are the worst offenders, as the publishers employ the glossy paper in order to meet the demand for highly finished photographic illustrations. As a matter of fact, there is no need to use any glossy paper if up-to-date methods are employed; in any case the more elaborate illustrations could be printed on separate pages, so that the text would be on an unglazed surface. Diagrams and line drawings can be well produced by the photo-zinc method at any place on any page. It may interest some of our readers to know that much of the light reflected from glazed paper is plane-polarized—we have got the most striking results from the shiny black cardboard boxes used by photographic dealers.

IN a paper read before the Royal Society on February 8, Drs. Harker and Kaye described a new method of obtaining electric currents. Steady currents were obtained for an hour between two carbon rods—one at the temperature of about 2500° C., the other being kept at a moderate temperature by water-cooling. The currents are such as would be produced by the emission of negative particles from the hot carbon, and it was found that the atmosphere of the furnace was highly ionized at ordinary atmospheric pressure. The furnace need not be an electric one.

WE may congratulate the London Branch of the Mathematical Association on an extremely successful year. All the meetings have been well attended, and the Branch has a large roll of members and associates. Prof. M. J. M. Hill, the President for the coming year, gave an address at the recent annual meeting which put the study of proportion in a clearer light to all who had the privilege of hearing him. Not a few went away resolved to study Euclid's fifth book for the first time in their lives.

IN the Annual Report of the Public School Science Masters' Association we were glad to read that the negotiations with the General Medical Council had reached a favourable conclusion, so that a public school may now be recognized as an institution where medical study may be begun. The Association has now issued a statement of the conditions under which schools can be approved and their pupils be registered as medical students. The effect of the new regulations will be to allow boys to remain under the public-school discipline, with guarded monitorial responsibilities, without delaying their final qualifications as medical practitioners.

A JUBILEE YEAR FOR TEACHERS. DE PRAECEPTORIBUS.

"I CHOSE to be a teacher, because teachers have good pay and long holidays," wrote a male pupil-teacher not so many years ago. This statement is not quoted for the purpose of opening a discussion with reference to its ethical value or to its verity, but because another aspect of the second advantage mentioned seems worthy of remark—viz., long holidays.

At all Educational Conferences and the like much emphasis is laid upon the noble calling of the teacher. Educationists and moralists are never weary of enumerating the various qualities, mental, moral, and physical, that should distinguish the members of so "grand and inspiring a profession." Far be it from me to dispute the necessity of possessing all these qualifications, but it does sometimes occur, even to the uninitiated, to wonder at the exceptional recuperative power

that a teacher must possess to be always fit for his work in the threefold capacity which is required of him. The drain on the teachers' strength is enormous, for he must give of his best if he is to do his lifework efficiently and develop in his pupils the spirit of worthy citizenship without which all education is futile. Mentally, morally, and physically he must always be "fit," and in proportion as he falls short of his standard of fitness do his pupils suffer, and does his work lose its hall-mark of excellence.

The ordinary holidays suffice for temporary recuperation, it is true, but they do *not* suffice for the preservation of that vigour which is essential to success in the teacher's work. In spite of the best efforts that the most conscientious teacher may make to keep "up to date," he will find, as the years go on, that those very efforts are apt to become wearisome, sometimes even futile, and that the very attempt to make them defeats its own ends. Other countries have recognized this and have realized that the year of absence granted to a teacher at the end of a certain number of years—seven or ten, as the case may be—is not only *not* a waste of time, but is a saving of time and even of money, although the teacher has received full salary during his absence. Breakdowns in health are rendered less frequent, if not unknown, and the increased energy in every direction more than compensates the Education Authorities for any transitory inconvenience to which they may have been put.

Of course, certain conditions must be laid down; but these will not be irksome or prohibitive, and the year spent in new surroundings (for one condition will certainly be that fresh ground to be specified by the teacher should be broken) will bring back something of the *joie de vivre* which should enable the teacher to face the years to come with fresh vigour and renewed hopefulness. The matter affects me more than a little, and I am glad to have this opportunity of making a plea for a teacher's "jubilee year." Some time ago a friend of mine said to me, with a sigh: "How I wish that we teachers had a jubilee year like the American teachers!" I was much surprised to hear such a wish expressed by this particular teacher, who, to all appearance, was in excellent health and enjoyed her work. She was an athlete and took a leading part in all the games, and she was one of the most popular members of the staff. Her "jubilee year" would, she told me, be the coming one, as she had been teaching for seven years. The end of the story is tragic, for, before the end of the next year, she had met her death by her own hand. Coincidence, perhaps. So be it!

We all know instances beyond number of overwork, overstrain, neuritis, neurasthenia, and all the other diseases of worn-out nerves, which are so familiar to us nowadays. Might not this result be avoided by some compulsory holiday of decent length, untroubled by pecuniary anxieties? I say "compulsory" advisedly, as no teacher will give in before it is absolutely necessary—and women are the worst offenders in this respect—even though by thus postponing the period of rest they lengthen it indefinitely. "Cowardice" and "courage" are apt to be confounded sometimes, especially by those whose reasoning powers have reached the breaking point, or, perhaps I should say, "vanishing point"!

That there are difficulties in the way of carrying out a scheme which would afford this opportunity to teachers of renewing their vitality—for that is what it amounts to—there is not the least doubt; nor is there any doubt that the benefit to the nation at large would be inestimable.

Surely the labourer is worthy of his hire!

V. P.

THE Carnegie Trust has completed its first decade, and the report just issued shows how the income of ten years, amounting to just over a million, has been spent:—Research, £63,546; grants to Universities, colleges, &c., £368,288; payment of class fees, £445,373; administration, £30,158. From the reserve fund, amounting to £140,000, the Committee propose to make loans for the building of hostels, at a very moderate rate of interest, on the security of the land and the buildings erected.

JOTTINGS.

A VETERAN member of the profession has—at the age of ninety-two—passed to her rest, in the person of Miss Louisa Gann, secretary and for some time attached to the teaching staff of the Female School of Art, Bloomsbury, now incorporated with the Central School of Arts and Crafts. Miss Gann was appointed to the School in 1842, when it was established in connexion with the then Science and Art Department, South Kensington, and she filled the post from that date on into the early years of the present century: perhaps no other of our contemporaries has had quite such a long period of professional service to her credit. She will still live in the kindly thoughts of many students belonging to the present generation, and these include grand-daughters of her early pupils. It is suggested that a book-plate shall be designed in lasting memory of a life devoted to the interest of the school.

THE University of Lausanne announce the Summer Vacation Courses for 1912—the first from July 22 to August 9; the second, August 12 to 30. "Une section de chant" is a new feature. Full particulars can be obtained on application to Monsieur Jean Bonnard, University, Lausanne.

THE French Academy, as a legatee of George Sand's daughter, Madame Dudevant-Palazzi, will shortly found a "George Sand" prize for literature. Part of the legacy will also be used for the upkeep—as a "George Sand" Museum—of the little Château de Nohant, which under the will becomes the property of the Academy.

WINCHESTER.—The Head Master and the ex-Head Master are appealing to Wykehamists to contribute the cost of one of the new buttresses on the south side of the Cathedral, to be called the Winchester College Buttress. It is one of the two on which the Shrine of the Founder rests, and the sum required is £575.

MR. EDWARD SCHRÖDER PRIOR, F.S.A., has been elected Slade Professor of Fine Art in succession to Dr. Waldstein, resigned. Mr. Prior was a pupil of the late Mr. Norman Shaw and is Architect to Cambridge University. He was one of the founders of the Art-Workers' Guild and has written "A History of Gothic Art in England."

MR. EDMUND TAYLOR WHITTAKER, Royal Astronomer of Ireland, has been appointed to the Chair of Mathematics in the University of Edinburgh in succession to the late Professor Chrystal. Mr. Whittaker was bracketed second wrangler in 1895; he was First Smith's Prizeman in 1907 and a Fellow of Trinity College.

THE Leicester and Rutland Association of Secondary Teachers, at a special meeting on February 10, discussed the Report of the Consultative Committee on Examinations and passed resolutions: (1) The multiplicity of competitive examinations should be corrected, and the Board of Education should attempt, by means of conferences, to unify the demands of the Universities and other examining bodies; (2) external examinations should be maintained as a wholesome stimulus, but they should be based as closely as possible on the teacher's syllabus, and the results should be checked by the school record and supplemented by interview examinations conducted by H.M. Inspectors; (3) examinations of the Junior Local standard should not be abolished; (4) if a Central Examination Council is established, the Universities should remain separate school examining bodies under general control. We confess that these resolutions seem to us an attempt to run with the hare and hunt with the hounds. To take a single point. If the examination, say in history, is to be based on the teacher's syllabus, a separate paper must be set for each school, and a whole staff of supervisors would be required to reduce to a common standard the marks awarded.

THE Teachers' Guild announce for this year three Holiday Courses in Modern Languages, to be held during the first three weeks of August, at Honfleur, Lübeck, and Santander. Special attention is paid to the teaching of phonetics and pronunciation. A handbook, giving full particulars of cost, lodgings, syllabus of lectures, &c., may be obtained on application to the office of the Guild, 74 Gower Street, W.C., after the 25th inst.

THE Syndics of the Cambridge University Press announce two new series to meet the needs of students of agriculture. The first, called the "Farm Institute Series," is intended for the average

student who is in training to be a farmer. The account of general principles will be driven home by concrete examples taken from the best farm practice. The second series will consist of monographs written by specialists, summarizing the most advanced agricultural science of the day. The general editors of both series are Prof. T. B. Wood, of Cambridge, and Dr. E. J. Russell, Rothamsted Experimental Station.

MR. KAHN, Head Master of the County Secondary School, Holloway, has been appointed to a Staff Inspectorship under the Board of Education. Mr. Kahn was Head of the Commercial Department of University College School from 1900 to 1907, and is Chairman of the Education Committee of the Teachers' Guild.

THE announcement of a new book by Prof. Skeat confirms his claim to be called the Grand Old Man of Literature. His publications already occupy more than a column of "Who's Who." In an interview on his seventy-sixth birthday that appeared in the *Morning Post*, he mentioned incidentally two interesting literary facts. Dr. Joseph Wright received a Treasury grant of £600 in aid of the "English Dialect Dictionary." This sum has since been all repaid from the profits of the work. The expenditure of the Clarendon Press on the "Oxford English Dictionary" already amounts to £150,000.

A VERY interesting event in the history of the Birkbeck College is shortly to be celebrated, when the Chairman of the Governing Body, Mr. James C. N. White, is to be presented with his portrait to mark the completion of fifty years' connexion with the College. The portrait is being painted by Mr. Seymour Lucas, R.A., and it will be ready for presentation in the early part of the summer. A large number of past students and members are uniting with the governors and staff in the gift, and it is desired to enlist others, of whom it is felt there are many who would wish to join. The Secretary of the College will be glad to send particulars to anyone desiring to take part.

JAKES-DALCROZE RHYTHMIC GYMNASTICS.—Monsieur Jaques-Dalcroze, assisted by six advanced pupils from his College at Hellerau, near Dresden, will lecture and demonstrate in London in March. He has made the following engagements:—Wednesday, March 13th, 8 p.m., in the Small Portman Rooms, 32 Dorset Street, W. Friday, March 15th, 8.15 p.m., in the Great Hall of the London University, South Kensington. Saturday, March 16th, 3 p.m., at the Goldsmiths' College, New Cross Station; demonstration especially arranged for teachers and students.

WE have received the circulars of a firm in Chancery Lane which calls itself "The Institute of Modern Linguists." From the circulars it appears that this is a Scholastic Agency and that it also issues test papers for public examination. We know nothing for or against the firm, but we regret that it should have assumed a name so liable to be confounded with that of "The Institute of Linguists," an association with which it has no connexion.

WE regret that, by an oversight for which the Editor alone is responsible, our report of the Annual Meeting of the Association of University Women Teachers, held on January 20, was omitted in our Conference Supplement of last month.

"THE thing that 'nothing succeeds like' may be possessed to the full, and yet the sad reflection comes, *Quid non cogit mortalia anima?*"—*The Child*, February. Will Dr. Macnaughton-Jones please translate?

THE last three of the course of eight lectures on National Eugenics will be delivered at University College, Gower Street, on the first three Tuesdays of the month at 8.30 p.m. March 5, "Some Signs of Physical Degeneracy," by N. Bishop Harman. March 12, "Tuberculous Heredity and Environment," by Karl Pearson. March 19, "Social Problems: their Treatment, Past, Present, and Future," by Karl Pearson.

FABIAN EDUCATION GROUP.—On Tuesday, March 5, at Clifford's Inn Hall, at 8 p.m., Miss Margaret McMillan will lecture on "What the Worker Wants."

DR. A. P. LAURIE has been elected to the Professorship of Chemistry at the Royal Academy in succession to Sir Arthur Church, resigned. Dr. Laurie is the eldest son of the late Prof. Simon Laurie, and has since been Principal of the Heriot Watt College, Edinburgh. He was Assistant Commissioner to the

Royal Commission on Secondary Education, 1895, and is editor of the "Teacher's Cyclopædia," the third volume of which we recently reviewed.

THE "Directory of Women Teachers" is already well advanced, and will be issued in the early autumn by the Yearbook Press, price 5s. net. It follows closely the lines of the "Schoolmasters Yearbook." Part I deals with the various organized societies of women teachers; Part II is a biographical directory; and Part III is a list of secondary girls' schools, public and private, professional colleges, &c.

THE *Times* has published in pamphlet form, price 6d. net, the article, "Classics and the Average Boy," with a selection of the correspondence that the article evoked.

THE Annual General Meeting of the Teachers' Training Association will be held at the London Day Training College on Saturday, March 16. An important discussion has been arranged on "The Place and Value of the History of Education for Students in Training Colleges." Papers will be read by Dr. Mary Wood (Cambridge), Mr. M. W. Keatinge, M.A. (Oxford University), Prof. J. Welton (Leeds University), Prof. E. T. Campagnac (Liverpool University), and Mr. Charles Fox, M.A. (Cambridge University).

THE Thirteenth Annual Vacation Course for Foreign Women Students, under the direction of Mrs. Burch, will be held from July 5 to August 1 at St. Hilda's Hall. The main subject this year will be "The Influence of Oxford on the Life and Thought of the Nation." Mr. Jeffrey, Mr. de Burgh, Dr. Davey Biggs, Mr. Brett-Smith, Mr. Horsburgh, Dr. Burch, and Miss Margaret Lee are announced as lecturers.

WELCOME volumes recently added to "Everyman's Library" are Walt Whitman's "Leaves of Grass" (the last edition approved by Whitman), "Piers Plowman" (slightly modernized), "A Book of British Ballads," by R. Brimley Johnson, and "A Volume of Heroic Verse," by Arthur Burrell.

COLONIAL AND FOREIGN NOTES.

FRANCE.

When a French father has a grievance, he writes to the *Journal des Débats*, just as the angry parent in England appeals to the *Times* for sympathy. Here is a complaint that was lately vented in the great French newspaper. A gentleman last autumn sent his son, aged eleven years, as a day-boy to a *lycée* in Paris. He was astonished to see the boy repairing twice a day to school with a weight of books on his arm tiring even for that of an adult. "Mons fils, devenu lycéen," exclaims the father, "est en même temps devenu portefaix." If this was physical education, it was physical education in the worst form. A satchel was provided in order that the weight might be transferred from the arms to the back. One Wednesday it was found to be too small; the young *lycéen* had to carry some of his exercise-books under his arms. Morning school that day required: a French grammar, a volume of French exercises, one of "choice extracts," one of fables, one of "scenes from the dramatists," a Latin grammar, a Latin word-book, a Latin "method," a volume of logical analysis, an *épître historique sacrée*, a collection of passages for translation from Latin and nine paper-backed exercise books or note-books, to say nothing of pens, ink-bottle, and written home-work. We have never known so much learning laid upon the shoulders of an English boy. Yet even at home we are for lightening the child's load. A great burden of books may impress the public; it is no measure of attainment or of efficient teaching.

Both France and Switzerland are preparing to celebrate this year the two hundredth anniversary of the birth of Jean-Jacques Rousseau. The French committee, composed of senators, deputies, University graduates, men of letters, artists, the mayors of the towns in which Rousseau lived, and delegates from Geneva and Neuchâtel met on January 11, in order to settle the program of the celebrations. In addition to official ceremonies at Paris, there will be given, from June to September, a series of *fêtes de la Nature* in certain provincial towns. The president of the com-

mittee is N. Léon Bourgeois, a senator. If in some things education has left Rousseau behind it, the memory of the inspiration that he breathed is imperishable. And many of his axioms have been so universally accepted that one wonders that it should ever have been necessary to formulate them. Take as an example this:—"La première éducation est celle qui importe le plus, et cette première éducation appartient incontestablement aux femmes; si l'Auteur de la nature eût voulu qu'elle appartint aux hommes, il leur eût donné du lait pour nourrir les enfants."

Let us leave Rousseau for the present. As we have said before, compulsory education has not done its work perfectly in France any more than in England. Among the conscripts the number of the illiterate is still large, in spite of School Laws. Last year in Dordogne the illiterates were 8.83 per cent.; in Morbihan, 10.02; in Corrèze, 10.16; of the *sublettrés* (it is the official term for those who can read only by spelling out the words) the percentage was 30, 40, or even 50. One young soldier said Bismarck was a Frenchman who betrayed France; another that Morocco was a country in which there had lately been strikes! Moved by the example of Switzerland, where the *recensement intellectuel* of the recruits, now in operation for more than thirty years, has produced marvellous effects, the French Chamber established (June 29, 1910) for conscripts an annual examination in the subjects of primary education. The Conseil supérieur has just approved new regulations for the conduct of this examination, which will be "pour tous les Français accomplissant leur première année de service comme appelés," and will be held in the first week of their incorporation.

Last May an English Bill was drafted to raise the school age and to enable the Local Authorities to draw the adolescent into continuation classes. One day Mr. Runciman dropped his Bill noiselessly and went forth to ravage our kailyards. But before May M. Buisson in France—for we are compelled always to follow and may nowhere lead—had brought in a similar Bill (March 6, 1911). He was not able to go forward with it. But there the parallel ends. Mr. Runciman traverses the country, discoursing of agriculture with the same airy confidence as that with which he used to talk about education, his mind not biased by any knowledge of his subject. M. Buisson is a patriot, and he means business. Through his organ, the *Manuel général de l'instruction publique*, he has been conducting an inquiry into the whole subject of Continuation, or, as the French term is, *l'enseignement post-scolaire*. Replies to questions have been received by the *Manuel* from M. Cohendy, M. Raoul Péret, Deputy and Reporter on the Budget of Commerce, M. Coupat, Secretary of the Fédération des Mécaniciens, and others. We should like to show what the idea of Continuation is beginning to comprehend in France.

The scientific elements, writes one respondent, which should appear in every scheme of instruction may be arranged in six groups. (a) Elementary literature; a workman must know how to speak and write his native language, and, especially on a frontier, he should have some knowledge of that of a neighbouring country. (b) For the exact sciences it will be expedient to teach everywhere the practical applications of mathematics and geometry; so with physics, chemistry, and mechanics—no one should be ignorant of their fundamental principles. (c) In the sphere of Nature, outlines of the vegetable, mineral, and animal kingdoms should be presented, along with an indication of the resources severally drawn from them. (d) In art more attention than ever should be given to drawing as applied to the industries, and, secondarily, to modelling and to moulding; for these forms of art, besides their daily utility, have a happy influence on mind and body. (e) As to history and geography, their chief themes in continuation classes will be the progress of industry, the sources and distribution of industrial products. (f) From the commercial point of view, a little book-keeping, some letter-writing, and some slight study of law as it relates to industry will serve to inculcate habits of economy and order, or will give guidance for the conduct of life.

We hear the practical teacher cry out: "Yes, but the time for this? How can you pack it all in?" The English draft Bill fixes the maximum number of hours during which attendance of continuation classes may be required at a hundred and fifty a year. We know that not all the arts and sciences can be taught in a hundred and fifty hours. But, as we have already said, experience alone will show us what we can teach and how best to teach it. For the present we must keep in mind the two great objects of Continuation. It seeks, on the moral and intellectual side, to exercise wholesome influence on the adolescent and to prevent the work of the primary school from being wasted; in its economic aspect it aims at a vast increase of the productive power of the nation by means of voca-

tional instruction. Thus liberal and vocational elements must be combined in it. Let us insist on the combination, and let us, leaving Mr. Runciman to sweep the fields with the wind of his rhetoric, imitate M. Buisson in patriotism and in sticking to business. Continuation gains favour in proportion as it is understood. We ask our readers to be earnest in endeavouring to diffuse a clear conception of its ends, so that the Bill, when it is revived, may have an irresistible weight of educated opinion behind it. We must not lose heart because Mr. Runciman betrayed us.

Working men will clamour for the Bill as soon as they grasp its scope. [But will they tolerate the exemption of children "beneficially employed in agriculture" ?]

A Volte-face possible.

If Mr. Lloyd George were President of the Board of Education, there would be conferences with the trade unionists, at the end of which we should have, not *permission to require* attendance at continuation classes, but *obligation to compel it*. Perhaps Mr. Pease may be no less bold. His countrymen are looking for a sign—eagerly and hopefully.

GERMANY.

Pedagogues differ about most things, about none more irreconcilably than handwriting. One would regenerate mankind by means of the vertical style ; another proves that the slanting script was, after

Handwriting.

all, more salutary. We ourselves have declared for legibility as the supreme virtue of handwriting. In Prussia a new idea has found acceptance. Since it is wrong to train all children, without regard to their several dispositions, to the same way of writing, the Kultusministerium has designed a reform of the mode of instruction. Every child must be induced to express his personality in his handwriting, which is to have, as we say, "character." The school of the future will enable us to distinguish the knave from the honest man by a study of his autographs! Yet the task of the teacher in the matter would seem to be no light one.

The Germans continue the struggle to restrain the circulation of demoralizing fiction. It is calculated that in the year 1908-9, and in Germany alone, £2,000,000 were earned by the sale of these pernicious wares—detective stories, adventures of the Sherlock Holmes or Nick Carter sort, and criminal romances. In spite of all efforts the magnitude of the evil has been but little diminished. The cinematographic theatre helps to deprave the young and to foster a taste for *Schundliteratur*, which supplies explanatory texts for the pictures. Such theatres need to be sharply watched, and in Germany they stand under police control. Thus for the towns of Königsberg, Memel, Rastenburg and Braunsberg a police regulation has been issued by which children and young persons under sixteen years of age are forbidden to visit cinematographic theatres after 8 o'clock in the evening, even in company with adults. The manager who admits them is liable to a fine of £3, or to imprisonment. Similar restrictions prevail in many other places.

Germany is as eager to fly as France. The new Prussian budget allots to Göttingen a further sum of £200 a year in permanency, and a single grant of £50, for scientific aeronautics. This, it appears, is in addition to the assignment in 1911 of £750 a year. To the Technical Hochschule of Charlottenburg, also, State aid for aeronautics is accorded. There a balloon hall is to be hired, the sum offered towards its maintenance being (for 1912) £2,400.

UNITED STATES.

Vocationalism continues to be the dominant note of educational progress in the United States. Chicago would seem to be the chief centre of the movement to further it. But everywhere it spreads. A resolution passed at the last meeting of the Pennsylvania State Association emphasized the need of vocational training for that great majority of children whose educational opportunities cannot extend beyond those furnished in the public schools. Whether the formal education of a child were to end on his fourteenth birthday or at some other time before ripeness for college, he ought, said the Association, to receive the *best preparation for efficient life* that can be devised. At Peoria, Illinois, a special organ, *Vocational Education*, is published. The Educational Conference of Boston recommended that the department of vocational guidance at Boston should be enlarged and more effectively organized, with a Director of Educational Guidance at its head. Vocational guidance, it will be remembered, aims at fixing the mind of the child, from the earliest possible moment, upon the deliberate choice of a vocation and upon the means of preparing himself for it. The American

boy will not, on leaving school, suddenly decide to become, for example, a cabinet-maker. He will have been a cabinet-maker *in spe* from early childhood.

There is much of tragedy in the thought that hitherto the great army of workmen has been recruited without any regard for the natural capacity or the will of the recruits. Yet the iron law of supply and demand imposes a limit upon freedom in the choice of a

A strange Subject of Instruction.

trade. On the economic question, however, we may not dwell ; let us rather tell of a strange form of vocational instruction obtaining in America. Boston has been for five years teaching "salesmanship and saleswomanship"—or how to vend wares. This winter the Young Men's Christian Union is having a course at which real, expert salesmen sell real goods to real purchasers, while the students look on. A different "line of goods" is offered every evening. The students watch the process and make notes upon it. When the selling is over they are allowed to ask questions, and, if there is any delicate point of *finesse* that they have failed to notice, it is brought to their attention. We suggest that a moralist should be present at the instruction, lest haply teachers and pupils should confound the art of persuasion with the art of deceiving.

Teachers are to profit by the recent quickening of Boston. Those whose salaries have been less than 1,000 dollars

Other News from Boston.

maximum are to have their salaries increased from January 1, so far as the ten cents on 1,000 dollars provided by the last legislature will allow. Every teacher in the city had a New Year present of five dollars from a special water-rate allowed to the School Board. At a recent School Committee meeting an order was passed which will reduce the quota of pupils per teacher in the elementary classes from forty-four to forty, and in the ungraded classes from thirty-five to thirty. This order will come into effect next September, and will mean, among other things, the appointment of two hundred additional teachers and an initial cost of 120,000 dollars.

INDIA.

A circular issued by the Director of Public Instruction for Bombay and relating to home-work may have something of suggestiveness for teachers in England as well as for those in India.

Home-work.

I. Inasmuch as home-work is intended to encourage reading and thought on the part of the pupil, to supplement class-teaching, and to employ leisure time usefully, it should never consist in the fair-copying of notes scribbled in the classroom, or in the cramming of whole pages of textbooks or be such as can be performed by a private tutor ; nor should it be excessive in quantity. Head masters should therefore see that the following instructions as to its quantity and nature are observed.

II. *Quantity*.—Primary : below Standard IV, none ; Standards IV, V, not to exceed a fair hour's work for the average boy ; Standards VI, VII, not to exceed an hour and a half, as above. Secondary : below Standard IV, not to exceed a fair hour's work for the average boy ; Standards IV, V, not to exceed two hours, as above ; Standard VI, not to exceed two and a half hours, as above ; Standard VII, not to exceed three hours, as above. Early morning work should be encouraged ; if done in the evening home-work should be done after games and not instead of them.

III. *Nature*.—On no account should the practice be allowed of copying out at home what has been scribbled to the teacher's dictation in class. No written work such as can be done by another person should be set—e.g., essay, translation, or sums. Every use is to be made of the school library, and private reading is to be insisted on. Work should not be so difficult as to be discouraging to the average boy, but should be such as to encourage self-reliance. Nothing that can be done for the pupil, and only that which can be done by the pupil, is wanted.

CAPE OF GOOD HOPE.

The *Education Gazette* reports a judgment of the Court of Appeal in regard to the admission of children

Coloured Children.

of other than European parentage or extraction into undenominational public schools established for the education of European pupils. The Chief Justice, supported by the full bench, maintained entirely the finding of the Courts below that it was part of the policy of the Cape School Board Act of 1905 to promote the establishment of separate public undenominational schools for children of European parentage or extraction and for children of other than European origin. Schools for European children are for those of *unmixed* European descent ; excluded from them are children obviously coloured. Where

THE HOME UNIVERSITY LIBRARY

"Is without the slightest doubt **THE PIONEER IN SUPPLYING SERIOUS LITERATURE** for a large section of the public who are interested in the liberal education of the State."—*The Daily Mail*.

"The fact is," says the *Pall Mall Gazette*, "that this remarkable library helps to realize one of those functions of a true University which English Universities have culpably neglected. . . . **THIS LIBRARY** makes a most effective and useful beginning in the popularisation of knowledge. . . . The scope of the series is as wisely outlined as its methods are effective and praiseworthy."—*The Spectator* says: "**THE HOME UNIVERSITY LIBRARY** has a character of its own. . . . An experiment as praiseworthy as it is bold. . . . If the books are small, they are of excellent quality, and the enterprise itself is large enough. . . . It is a great satisfaction to know that, so far, it has been a great success."

FORTY VOLUMES NOW READY.

THE FOURTH TEN VOLUMES ARE:

- | | |
|--|--|
| 33. THE HISTORY OF ENGLAND: A Study in Political Evolution. | By Prof. A. F. POLLARD, M.A. |
| 34. CANADA | By A. G. BRADLEY. |
| 35. LANDMARKS IN FRENCH LITERATURE | By G. L. STRACHEY. |
| 36. CLIMATE AND WEATHER | By Prof. H. N. DICKSON, M.A., D.Sc. |
| 37. PEOPLES AND PROBLEMS OF INDIA | By Sir T. W. HOLDERNESS, K.C.S.I. |
| 38. THE SCHOOL: An Introduction to the Study of Education. | By Prof. J. J. FINDLAY, M.A., Ph.D. |
| 39. ARCHITECTURE (Illustrated) | By Prof. W. R. LETHABY. |
| 40. THE PROBLEMS OF PHILOSOPHY. | By the Hon. BERTRAND RUSSELL, M.A., F.R.S. |
| 41. ANTHROPOLOGY | By R. R. MARETT, M.A. |
| 42. ROME | By W. WARDE-FOWLER, M.A. |

Write for a complete Descriptive Pamphlet containing particulars of the volumes published and of a large number in active preparation.

WILLIAMS & NORGATE, 14 Henrietta Street, Covent Garden, London, W.C.

THE FEBRUARY ISSUE OF

The Journal of Education

(post free, 8d.) contains:—

"Classics and the Average Boy."

The Revolution in Women's Education.

Work on the Land in a Secondary School.

Secondary Teachers' Provident Society.

Solomon Rabshakeh. ELIZABETH RENDALL.

Afterthoughts on "What is and What might be."
SUSAN PLATT.

Reviews and Minor Notices.

The Cambridge Medieval History (Gwatkin and Whitney); Treatise on Practical Light (Clay); The Greek Commonwealth (Zimmern); William Pitt and National Revival (Rose); Nuts and Chestnuts (Tollemache); The Teacher and the School (Colgrove); Board of Education Special Reports on Educational Subjects, &c.

Scouting in Secondary Schools.

Annual Meetings and Conferences.

Association of Head Masters—Modern Language Association—North of England Education Conference—The Classical Association—The London County Council Conference of Teachers—The Association of Public School Science Masters—The Private Schools Association—The Historical Association—The English Association—The Mathematical Association.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

Few People have more writing to do than the busy Teacher. That's the reason why only a few Teachers are without a

'SWAN'
FOUNT PEN.

Are you one of the few?

Get your
"SWAN"
to-day

—the Fountain Pen that never fails in its object—writing. The "SWAN" is made to write, and it always writes when you want it to write—the ink responds instantly you put pen to paper, and the same "just ample" flow continues to the finish.

Sold by all Stationers and Jewellers.

10/6 upwards. Catalogue free from Makers.

MABIE, TODD & CO., 79 & 80 High Holborn, London, W.C.

colour is not obvious, the *onus* lies on objecting parents to produce clear proof of the non-European element in the children whom it is proposed to exclude. At the Cape of Good Hope most of the coloured children are in mission schools; but during the last few years a number of public schools have been established specially for such children. The list of coloured public schools shows that there is one of the first class with an enrolment of 66 pupils; two of the second class with an enrolment of 438; and fourteen of the third class with 1,380 pupils on the registers. There are, in addition, four third class public schools which for all practical purposes may be regarded as coloured. These schools contain 382 coloured and 82 white pupils. The schools referred to above are to be found in the large centres—at Cape Town, Port Elizabeth, and Kimberley—and there are also several distributed over the railway system.

NOTES FOR OBJECT LESSON. INFANT CLASS.

LUMP OF COAL.

Object of Lesson to Collect, Collate, and Co-ordinate.

Introductory Song: "Old King Cole."

Hold up lump of coal and elicit, recording on blackboard thus:—

A lump of coal is very black,
Coal-heavers bring it on their back.
This lump of coal is very big;
A pit, to get the coal, we dig.
Coal lies in *strata*—seams so thick:
You sew your seams, the miners pick.
Coal is *opaque*; this hard word stumps;
It means you can't see through the lumps.
Come close and try, but do not touch,
For fear you might your noses smutch.
A lump of coal is fossil wood:
I'll show you fossils if you're good.
Be good, and this last lesson learn:
(Right face! All to the fireplace turn)—
Coal blazes when I bid it burn.

[Throws lump on the fire.]

Grammar.—Parse: "A coal-heaver coals a barge with coals."

Arithmetic.—If a coal and a half costs three farthings, how many coals in a scuttle costing sixpence?

Geometry.—How many sides in a cube, a ball, and a microscopic slide of coal?

Literature.—Learn Herbert's "But when the whole world turns to coal Then chiefly lives."

Scripture.—Who laid a coal on whose lips? When and where should you "heap coals of fire"?

If there is time, exhibit fossil ferns and microscopic slides.

EDUCATION IN THE PERIODICAL PRESS.

American Undergraduate. Second paper. Education à la Carte. By Clayton Sedgwick Cooper. *Century Magazine*, February.
Architectural Education in England and America. *Architects and Builders' Journal*, January 24.
Architectural Education, The Institute and. By W. S. Purchon. *Architect and Contract Reporter*, February 2.
Critical of the R.I.B.A. Examinations, &c.
Architecture, On the need for an English School of: an interview with Prof. Reilly. *Architects and Builders' Journal*, January 31.
Arithmetic, The New Spirit in the Teaching of. By A. S. D. *Morning Post*, February 23.
Characterizes and commends the reform, pointing out the pitfalls. An admirable article.
Art, Should we Stop Teaching? II. *Architect and Contract Reporter*, January 19.

Bedford College and Queen Mary's Hostel. *Times*, February 8.

Leading article in connexion with the £100,000 collection.

Clothing of School Children in relation to Physique and Physical Exercises. By Alice M. Burn. *Sanitary Officer*, February.

"I venture the statement that 70 per cent. of the girls in our elementary schools are physically victimized to their clothes. I know of no other one condition—not even excepting bad housing and bad feeding—which, taken alone, is responsible for so much impaired vitality and consequent low standard physique."

Educational Conferences considered in relation to Science in Public Schools. I. By G. F. Daniell. *Nature*, January 18 and 25.

Deals with educational conferences taking place at the time, and the papers read at them.

Education Figures. *Morning Post*, February 12.

An examination of Mr. Lloyd George's statement that expenditure on education has increased by £3,500,000.

Education in India. The Rajkumer College at Rajkot. *Times Educational Supplement*, February 6.

Feeble Minded, Problem of the. By L. *Spectator*, February 3.

Touches upon the children's side of the question.

Japan, Progress of Women's Education in. By Eveline Mitford. *Queen*, February 10.

"There is no doubt that this increase in women's education is having a great effect on the whole life of the nation."

Lectures and Textbooks, The Functions of, in Science Teaching. By Sir J. J. Thomson, F.R.S. *Nature*, January 18.

Presidential address to Association of Public School Science Masters.

Magdalen College and the Crown. *Times*, February 17.

Leading article; largely historical résumé.

Mathematical Education, Democratization of. By Prof. E. W. Hobson, F.R.S. *Nature*, January 18.

Presidential address to Mathematical Association.

Meaning of a University. *Times Educational Supplement*, February 6.

The object of a business is to pay; the object of a University is to be worthy of a trust which does not concern itself alone.

Muzzling the School Doctor. *Hospital*, January 27.

Advocates the publication of school medical reports.

New School and the Old Master. Schools and Scholars. By Foster Watson. *Morning Post*, February 9.

The school and its teachers are the creation of the community.

Oriental Studies, School of. *Times*, February 2.

Leading article on the report of the meeting of the Board of the London Institution; also in *Morning Post* and others.

Oxford, Lent Term at. *Times*, January 24.

Proposed reform of Responsions.

Parents, The Education of Some. *Spectator*, February 3.

In the form of a letter to a mother.

Playground Classes, The Value of. *Medical Officer*, January 27.

An account of what has been done and is to be done during the immediate future.

Position of the Education Question. *Guardian*, January 19.

Leading article.

Power of the Teacher. Schools and Scholars. By A. S. D. *Morning Post*, February 16.

"The dullest children in a bright school are brighter than the brightest children in a dull school—no matter what the homes are like. While the children are at school I should put the school's influence as high as 75 per cent. of the factors that determine the child's character. Of course, that influence gradually subsides when the child leaves school."

Ruskin College. By an Old Student. *Daily News*, February 8.

Schoolroom, The "Compleat." By L. G. S. *Daily Chronicle*, January 31.

The private house schoolroom mainly.

State, Education and the. *Local Government Chronicle*, February 3.

Teachers' Council. *Times Educational Supplement*, February 6.

Leading article.

Tubercular Children, Schools for. *Hospital*, January 27.

Universities and Business. *Standard*, February 14.

"Business is the most promising career open to young men of talent and education."

Universities of the Empire. *Times*, February 13.

Leading article on the coming Congress of Universities of the Empire.

What was and What might have been: a Question for Mr. Holmes. Schools and Scholars. *Morning Post*, February 2.

(Continued on page 176.)

MACMILLAN'S NEW BOOKS.

The Outdoor Life in Greek and Roman Poets and Kindred Studies.

By the Countess EVELYN MARTINENGO-CESARESCO. Extra crown 8vo. 6s. net.

THE TIMES.—"The book is delightfully blended of literary lore and living experience."

THE ATHENÆUM.—"We hail with pleasure another charming volume from the Countess Martinengo-Cesaresco. Living much in Southern Europe, and full of sympathy for the life of the simple and the poor, she has struck on the excellent idea of studying what may be called the non-classical side of classical life."

PALL MALL GAZETTE.—"Her method is simple, direct, and altogether charming . . . illuminating it all with exquisite little touches of illustration from what her own eyes have seen."

SATURDAY REVIEW.—"Her books would not be so pleasant as they are if they were not founded on substantial knowledge."

Formal Logic: a Scientific and Social Problem. By F. C. S. SCHILLER,

M.A., D.Sc., Fellow and Senior Tutor of Corpus Christi College, Oxford; Author of "Humanism: Philosophical Essays," and "Studies in Humanism." 8vo. 10s. net.

Outlines of Liberal Judaism for the use of Parents and Teachers. By

CLAUDE G. MONTEFIORE. Crown 8vo. 2s. 6d. net.

THIRD EDITION, THOROUGHLY REVISED.

Outlines of General Chemistry. By WILHELM OSTWALD, Emeritus-Professor of Chemistry in the University of Leipzig. Translated with the author's sanction by W. W. TAYLOR, M.A., D.Sc., Lecturer in Chemistry, University of Edinburgh. Third Edition, thoroughly revised. Illustrated. 17s. net.

Treatise on Practical Light. By REGINALD S. CLAY, B.A., D.Sc. Fully illustrated.

10s. 6d. net.

THE JOURNAL OF EDUCATION.—"There are about 400 practical exercises in the book, and quite 90 per cent. are really well worth performing. . . . The apparatus is selected with judicious economy, home-made appliances are used where advisable and not otherwise; thanks to the author's experience as a teacher, he has been able to cover a remarkable range of work with comparatively little outlay. The treatise will be of great service in colleges and technical institutes."

General Physics for Students. A Text-book on the Fundamental Properties of

Matter. By EDWIN EDSE, A.R.C.Sc., Author of "Heat for Advanced Students," "Light for Students," &c. Illustrated. 7s. 6d.

NATURE.—"By the collection of so much fresh material into one volume, Mr. Edser has made accessible to students many parts of physics, which, either from lack of time or initiative, they have hitherto been unable to appreciate. This has been done in no meagre fashion, the details, both experimental and theoretical, being consistently of a very comprehensive character."

NEW TWO-SHILLING EDITION

Novels of Maurice Hewlett. With Frontispieces. In cloth binding. Crown 8vo.

2s. net each. Two Volumes issued monthly. 1. *The Forest Lovers*. 2. *The Queen's Quair*.

MACMILLAN & CO., Ltd., LONDON.

Atkinson's Mouth Measurer

FOR THE PRACTICAL STUDY OF PHONETICS.

Supplied to Phoneticians and Phonetic Laboratories
at Home, on the Continent, in U.S.A., and Australia.

Two nickel-plated German Silver instruments by the aid of which the positions of the tongue, palate, &c., can be accurately determined. Contrary to previous methods, this one allows of the vowels being pronounced while the measurements are made.

The Instruments are made to Mr. ATKINSON'S specifications by a large London firm of Dental Instrument Makers.

Dr. HENRY SWEET, University Reader in Phonetics, Oxford:—

"Mr. Atkinson's apparatus is, as far as my knowledge goes, the best that has yet been devised for determining objectively the position of the tongue in forming the different speech sounds."

Mr. DANIEL JONES, Lecturer on Phonetics at University College, London, and Assistant Editor of the "Maitre Phonétique":—

"I have made frequent use of the 'Mouth Measurer,' and find it gives excellent results. It is a most ingenious little instrument, and should prove of great value to students and teachers of phonetics."

Mr. BERNARD MACDONALD, Lecturer in Voice Production and Elocution at Mansfield College, Oxford; Queen's College, London, &c.:—

"By the use of the instruments I have been able to clear up many previously doubtful points as to vowel positions. The instruments have been invaluable to me."

Dr. D. L. SAGREY, Professor of French and Romance Philology at the University of Belfast:—

"I consider that the instrument is exceedingly valuable for the purpose of scientific research, and further as a demonstration apparatus which should be in the possession of every teacher of modern languages."

Price, post free, Five Shillings; Abroad, Five Shillings and Sixpence.
Cash with Order.

Obtainable only from—

HAROLD W. ATKINSON, M.A., West View, Eastbury Avenue,
Northwood, Middlesex.

AN IMPERIAL JOURNAL ON CHILD WELFARE.

THE CHILD.

EDITED BY

T. N. KELYNACK, M.D.

Assisted by a representative Staff of Medical, Educational,
and Philanthropic Experts.

THE CHILD is a monthly journal designed to meet the requirements of all engaged in Child Study or working for the betterment of Child Life. It is a medico-sociological and educational journal dealing with all questions relating to Infancy, Childhood, and Youth. Parents, Educationists, Philanthropic Workers, School Doctors, Students of Child Life, and all interested in the well-being of Children will find in THE CHILD a representative organ. It is a journal specially designed to secure the co-ordination of all work and the co-operation of every class of workers for Child Betterment.

PUBLISHED MONTHLY. Price 2s. net.

ANNUAL SUBSCRIPTION TO ALL PARTS OF THE WORLD.

ONE GUINEA, or £5.25.

A Specimen Copy will be forwarded on receipt of
3d. for postage.

JOHN BALE, SONS, & DANIELSSON, Ltd.,
83-91 Great Titchfield Street, Oxford Street, London, W.

THE MORAL AND CIVIC EDUCATION OF CHILDREN.

THE fourteenth Annual Meeting of the Moral Education League was held on Tuesday, February 13, at the Royal Society of Arts. The Annual Report recorded a steady increase of support at a time when the "religious difficulty" in education was not actively before the country, and as a result of purely educational work apart from political conflicts of the hour. During the year, the League's Official Demonstrator, Mr. F. J. Gould, had delivered over fifty Demonstration Moral Lessons in many parts of Great Britain and Ireland and nearly the same number of lessons in leading cities of the United States of America. These included lessons before the staffs and students of ten training colleges in England and Wales, and before three University summer schools in the United States of America. In India the League's book of moral lessons, "Youth's Noble Path," has been adopted by the University of Calcutta, the Government of Bengal, and, in large part, by the Government of Bombay.

The Business Meeting of the League was followed by a General Meeting of members and friends, when the Annual Address was delivered by Mrs. Bryant, D.Sc., Litt.D., on "The Many-sidedness of Moral Education," Mr. G. P. Gooch, a Vice-President of the League, presiding.

The Need of a High Ideal.

The lecturer pointed out that one of the most important aspects of moral education was the training of character as such—the development of a person vague in motive, feeble in purpose, and incalculable in action into a personality of determinate character on which one could count, with steady life purposes implying a life ideal to the realisation of which all particular desires were subordinated. But everything depended on the nature of the life ideal under which this efficiency had been acquired. If the result attained by parent or teacher were merely the "men of character," the egoists, who "get on in the world," little worth mentioning had been achieved. Hence there emerged a further demand on the moral educator for the rescue of these capable persons from their egoistic fate. The wiser parent or teacher would have duly provided for the development of character along the lines of altruistic motive, social purposes, and a full composite ideal of life and personality.

From Egoism to Altruism.

The problem of the egoist remained in any case. Since human nature tended not a little to develop on egoistic lines, a scheme for moral education should on one of its sides make appeal to the individual's desire for his own good in some sense that he understood. It was not necessary that this should be the sense of ease or pleasure. Man the individual, no less than man the social member, needed the moral life. In the language of Hebraic thought, he needed it as righteousness, cleanness of heart, singleness of purpose.

Pausing, first, to suggest that in moral education neither the way of religion nor the way of reason should be neglected, the lecturer proceeded to summarize the principal directions in the development of moral character in the young:—(1) The transformation of wayward impulse into a system of steady purpose. (2) The evolution of altruism side by side with normal egoism in wholesome social life. (3) Training to sense of duty, a freely moving conscience, liberality in submitting within limits to the social will, and, last, but not least, the self training of character to independent initiative and sturdy adhesion to purposes freely chosen.

HARROW VOLUNTARY SCHOOL CLINIC.—Recently at a semi-public gathering in Harrow, it was unanimously resolved to establish immediately a school clinic in Harrow. Dr. Schaychovsky, who initiated the movement, is well known as an assistant medical officer for schools under the L.C.C. He gave an address explaining Miss McMillan's work at Deptford, and made an appeal for £300 to start the Harrow clinic. This amount will provide accommodation, apparatus, a medical officer and dentist for one session per week, and a permanent nurse for about one year. After this period it is believed the clinic will be well established, and it is hoped that the Local Education Authority will come to its aid. It may possibly be the forerunner of a scheme for Middlesex. A committee to collect subscriptions and make all arrangements was appointed at the meeting, and included, besides some influential residents and representatives of local teachers, two masters of Harrow School—Messrs. Lascelles and Owen.

DUSTLESS SCHOOLS

For the effective LAYING of DUST and DIRT, during each Sweeping, and also throughout all the intervening periods—which is of greater hygienic importance,

the Odourless, or powerful Germicidal

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

On all School, Laboratory, &c., Floors & Linoleums of every description

Very EARLY in the EASTER VACATION

for Best Results.

NOT MORE THAN THREE TIMES A YEAR. Easily applied. Floors are impregnated, not sticky—the ordinary daily dry sweeping alone required to clean, without sprinkling of any kind.

"Florigene" is an aid to the prevention of throat and other diseases, and has been awarded the BRONZE MEDAL of the ROYAL SANITARY INSTITUTE. It is also strongly recommended by MEDICAL and other authorities.

Two well-known SCHOOL MEDICAL OFFICERS have jointly reported on the advantages of "Florigene"—

1. Economy of labour in cleaning the room.
2. Prevention of the rising of dust once deposited; hence a healthier atmosphere for breathing.

They also favour its more general adoption.

"Florigene" is being continuously used on the floors of The Royal Naval Colleges, H.M. Science and Art and other Government Buildings; also in numerous Schools, Laboratories, Libraries, Museums, &c., in the United Kingdom and Colonies with approval.

For particulars, Medical Reports and Testimonials write—

TRANSFER AND PARTNERSHIP DEPARTMENT.

MESSRS. GABBITAS, THRING, & CO., having upon their books at all times a large number of thoroughly *bona fide* Boys' and Girls' Schools for Transfer and Partnerships in such Schools to negotiate, as well as the names of a very large number of Purchasers, both ladies and gentlemen, are able, with their thirty years' experience, to negotiate the Transfer of Schools of all types confidentially and efficiently.

The Transfer Department is in the hands of one of the Principals, who personally attends to all instructions.

Valuations are carefully made.

No list of any kind is issued—all instructions being strictly confidential—but each Client receives individual attention on receipt of detailed particulars.

No commission is charged to purchasers.

BLACK'S GEOGRAPHIES.

By J. B. REYNOLDS, B.A.

REGIONAL GEOGRAPHY.

Demy 8vo. Price 2s. each. Bound in cloth.
Each containing from 64 to 100 Illustrations, Maps, and Diagrams.
For Upper Forms of Schools, Pupil Teacher Centres, and Training Colleges.

Asia. The Americas. The British Isles.
Africa and Australasia. Europe and the Mediterranean.
The World. Price 3s. 6d. (In preparation.)

JUNIOR REGIONAL GEOGRAPHY.

Small crown 8vo. Price 1s. 4d. each. Bound in cloth.
Each containing from 76 to 90 Illustrations, Maps and Diagrams.
For Upper Classes of Elementary Schools, and the Lower Classes of Secondary Schools.

Europe and the Mediterranean Region.
Great Britain and Ireland.
Ireland and Great Britain in Outline.

WORLD PICTURES.

AN ELEMENTARY PICTORIAL GEOGRAPHY.

Demy 8vo, cloth. Price 2s. With 71 Illustrations.
"A most beautiful book. It would be difficult to praise it too highly."
Secondary Education.
"A book written on scientific lines. . . . A successful attempt to familiarize youngsters with the human aspect of geography, and the seventy illustrations, plus the numerous exercises, are admirably fitted for this purpose."—*School World.*

By Prof. L. W. LYDE, M.A., F.R.G.S.,
Professor of Economic Geography in the University of London.

SCHOOL GEOGRAPHY.

Small crown 8vo, cloth. Price 1s. 4d. each.
Africa. Australasia and the East Indies. British Empire.
America (North). Asia. British Isles.
America (South). THE WORLD, 3s. 6d.

ELEMENTARY GEOGRAPHY READERS.

Illustrated. Price 1s. 4d. per volume.
No. III. England and Wales. IVb. Europe. Va. Africa.
IVa. British Isles. IVc. British Empire. Vb. Asia.
Vc. The Americas.

ELEMENTARY GEOGRAPHY.

Limp cloth. Price 4d. net per volume.
America. Asia. British Isles. Europe.
THE WORLD. (4th Edition.) Price 1s. 4d.

MAN IN MANY LANDS.

An Introduction to the Study of Geographic Control.
Containing 24 full-page Illustrations in Colour. Price 2s. 6d.

A SHORT COMMERCIAL GEOGRAPHY.

Third Edition. Price 3s., or interleaved for Notes, price 4s.

SCHOOL TEXT-BOOK OF GEOGRAPHY.

For Higher Forms. Illustrated with 83 Diagrams. Price 3s. 6d.

A HOME-WORK ATLAS.

Containing 48 Maps in Black and White. Crown 4to, cloth. Price 1s.

Detailed Prospectuses on application.

Published by ADAM and CHARLES BLACK, Soho Square, London, W.

WILL BE READY IN MARCH.

Demy 8vo, cloth, price 2s. 6d., free by post.

THE CALENDAR

OF

The College of Preceptors

For the Year 1912-13.

CONTAINING

The Regulations of the various Examinations of the College, and an Appendix containing all the Examination Papers set in 1911, with Answers to certain of the Mathematical Papers.

The Diploma Papers are to be had only in the Calendar.

London:

FRANCIS HODGSON, 89 Farringdon Street, London, E.C.

Sozodont TOOTH POWDER

and
SCHOOL
HYGIENE.

Much depends on those in charge of children for rendering effective the suggestions of Medical Officers and Dentists in regard to Mouth Cleanliness and prevention of Dental Decay.

Urge your scholars to use a cleansing and Anti-septic Dentifrice like Sozodont Powder, and note the difference at the end of the week.

The result will be a pleasure to them and to you. Sozodont Powder is sold in 6d. and 1/- Hygienic Tins by Chemists and Stores everywhere.

BOOKS BOUGHT AT GOOD PRICES.

MESSRS. BELL'S NEW EDUCATIONAL BOOKS.

GEOMETRY FOR SCHOOLS.

By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A.

Now Ready:—Vol. I.—Covering Stages I and II of the Board of Education Circular, No. 711, 1909. **1s.**

Vol. II.—Properties of Triangles and Parallelograms. **1s. 6d.**

Vol. III.—Area. **1s.**

Also Volumes I-III, price 2s. 6d.

Ready shortly:—Vol. IV (Circles). Vol. V (Proportions). Vol. VI (Solids).

Vols. II to VI cover Stage III of the Board of Education Circular.

Crown 8vo. **2s. 6d.** *Now Ready.*

ADVANCED ENGLISH GRAMMAR THROUGH COMPOSITION.

By JOHN D. ROSE, M.A., Rector of the Kirkcaldy High School.

The present book completes a course of English Grammar for schools according to the methods laid down in the *Elementary English Grammar Through Composition*, by the same author. The title explains the object in view. It is to treat Grammar, not as an end in itself, divorced from immediate utility, but as arising out of everyday forms of speech, and as giving practical help in their mastery and in the completeness of their study. The terminology recommended by the Joint Committee on Grammatical Terminology for all Languages taught in Schools has been adopted throughout.

CIVIL SERVICE EXAMINATION PAPERS.

Edited by H. N. ADAIR, M.A., Senior French Master at the Strand School, King's College, London.

This new series is intended primarily for the use of candidates for the Middle Grades of the Civil Service.

Now Ready. Crown 8vo, **1s. 6d.**

FRENCH COMPOSITION.

Consisting of Pieces set at Civil Service Examinations. Reprinted by permission of H.M. Stationery Office, and Edited, with Brief Notes, by H. N. ADAIR, M.A.

CONTENTS.—Second Division Examination Papers—Admiralty, &c., Papers—Military Entrance Examinations: Woolwich and Sandhurst—Assistant in the British Museum—Examinations for Student Interpreters—Class I—Notes.

Now Ready. Crown 8vo, **10d.**

GRAMMAIRE PRATIQUE.

Being a Grammatical Supplement to *Le Français de France*. By Mme VALETTE VERNET.

BELL'S ENGLISH TEXTS FOR SECONDARY SCHOOLS.

General Editor: A. GUTHKELCH, M.A., Lecturer in English Language and Literature, King's College, London.

Crown 8vo. With Introduction, Notes, Index, and a Map. **8d.**

New Volume. Ready immediately.

Lamb's Adventures of Ulysses.

Edited by A. C. DUNSTAN, Ph.D.

BELL'S

SIMPLIFIED LATIN CLASSICS.

Edited, with Notes, Exercises, and Vocabulary, by S. E. WINBOLT, M.A. Crown 8vo. With numerous Illustrations. **1s. 6d.** each.

New Volumes. Ready immediately.

Virgil's Athletic Sports.

Virgil's Taking of Troy.

EASY LATIN PLAYS.

By M. L. NEWMAN, High School for Girls, Sheffield.

Crown 8vo. Limp cloth, **6d.**

Of the two plays which are included in this volume, "*Mater Gracchorum*" is published at the request of teachers who attended the Summer School of Latin at Bangor. The play was written to serve as a reading book for an Upper Third Form during the second and third terms of the year in which Latin was begun.

Crown 8vo. With numerous Illustrations.

2 Volumes. **3s. 6d.** each.

AN EXPERIMENTAL COURSE IN PHYSICAL CHEMISTRY.

By J. F. SPENCER, D.Sc., Ph.D., Fellow of Victoria University, and Lecturer in Physical Chemistry at Bedford College.

This book, which provides the practical side to the well known text-books on Chemistry by Dr. Alexander Smith, will be found useful, indeed almost necessary, by all students proceeding to B.Sc. Degrees, and to the A. I. C. Degree of the Institute of Chemistry. Volume I deals with Statical experiments, and Volume II with Dynamical Experiments.

GASC'S FRENCH DICTIONARIES.

Gasc's Dictionary of the French and English Languages. TWELFTH EDITION. 960 pages, large 8vo, in treble columns, bound in half buckram. Price **12s. 6d.**

"Without making invidious comparisons, we may at any rate say that there is no French Dictionary published in England which surpasses Gasc's for correctness, comprehensiveness, and fullness of idiom, whilst only one or two can be compared with it."—*Educational Times*.

Gasc's Concise Dictionary of the French and English Languages. SIXTH EDITION, REVISED. Medium 16mo, treble columns, xii + 941 pages. **3s. 6d.** Also in Two Parts. Part I (French-English), **2s.** Part II (English-French), **2s.**

This Dictionary will be found to be much more complete and accurate than any other published at the same price.

"It furnishes all that the schoolboy wants, and deserves the same popularity that the larger work has obtained. It is a thoroughly sound and scholarly dictionary."—*The Journal of Education*.

Gasc's Pocket Dictionary of the French and English Languages. For use in Schools. 88th Thousand. **2s. 6d.**

Gasc's Little Gem French Dictionary. Abridged from Gasc's French Dictionary. By MARC CEPPI. Narrow 8vo, **1s.** net; limp leather, **2s.** net. Uniform in style with the well-known Webster's "Little Gem English Dictionary."

London: G. BELL AND SONS, Ltd., York House, Portugal Street, W.C.

METHUEN'S NEW BOOKS.

ENGLISH COMPOSITION.

By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 1s. 6d.

This work is intended for pupils of Secondary Schools and private students. It supplies a progressive course in English composition, embracing not only essays and letters, but also other important and useful work in writing English. Numerous and varied exercises are appended to each chapter, while questions and shorter exercises, many of which may be used orally, are introduced in the text. The importance of connecting the student's composition with his reading has been borne in mind throughout.

AN ENGLISH CHURCH HISTORY FOR CHILDREN.

By MARY E. SHIPLEY. With a Preface by WILLIAM E. COLLINS, D.D., late Bishop of Gibraltar. In Three Volumes. With Maps and Illustrations. Crown 8vo, 2s. 6d. net each. Vol. III, A.D. 1500-1911, *Now Ready*.

TECHNICAL ARITHMETIC AND GEOMETRY.

By C. T. MILLIS, M.I.M.E., Principal of the Borough Polytechnic Institute. Second and Revised Edition. Cr. 8vo, 3s. 6d.

An up-to-date course in Arithmetic, Geometry, and Mensuration.

DOUBLE ENTRY BOOK-KEEPING.

A Complete Treatise on its Theory and Practice. By JAMES CUSACK, LL.D., Principal of the Business Training College, Finsbury Square. Crown 8vo, 3s. 6d.

Covers the requirements for all the Elementary, Junior, and Intermediate Examinations held by the London Chamber of Commerce, the Royal Society of Arts, the National Union of Teachers, the Oxford and Cambridge Senior Locals, the College of Preceptors, and other similar Examinations.

A FIRST YEAR PHYSICAL CHEMISTRY.

By T. P. HILDITCH, D.Sc. Lond., F.I.C. Crown 8vo, 2s. [Text-books of Science.]

An attempt to render this branch of Chemistry more easy to those commencing its study. The more elementary outlines of the subject are treated, as far as possible, from the standpoint of practical use in solving chemical problems; accordingly, the first part of the book is devoted to characteristic properties, such as density or refractivity. Later chapters include introductions to the physico-chemical theories of gases and of solutions, and the more important applications of these theories to pure chemistry. The book should prove useful to Inter. B.Sc. and Final (Pass) B.Sc. candidates, as well as those taking Board of Education examinations.

PHYSICO-CHEMICAL CALCULATIONS.

By JOSEPH KNOX, D.Sc., Lecturer on Inorganic Chemistry, Aberdeen University. Cr. 8vo, 2s. 6d. [Text-books of Science.]

This book is intended for students of physical chemistry, as a supplement to the theoretical matter of lectures and text-books. Here the theory is applied to the solution of practical problems. The book contains eleven chapters, dealing with the main subdivisions of physical chemistry. Each chapter consists of a short introduction dealing with the theory required for the solution of the problems, a series of typical problems with complete solutions, and a list of problems for solution with answers. Practically all the problems have been taken from the original literature of the subject, and by a careful study of the solved problems the student should learn much. The large collection of problems for solution should prove useful to teachers.

A PRACTICAL CHEMISTRY FOR TECHNICAL INSTITUTES.

By A. E. DUNSTAN, D.Sc., and F. B. T. THOLE, B.Sc., Lecturer in Organic Chemistry, East Ham Technical College. Crown 8vo, 3s. 6d. [Text-books of Science.]

This Course of Practical Chemistry meets the requirements of the Upper Forms of Secondary Schools, where a good elementary foundation has been laid in the rudiments of manipulation. The book will be found useful also for classes in Technical Institutes, and covers the following ground:—

Quantitative Analysis of Simple Substances and of Mixtures—Volumetric Analysis—Simple Gravimetric Analysis—Preparation of Pure Compounds—More Difficult Quantitative Analysis—Qualitative Organic Analysis—Ultimate Organic Analysis—General Organic Determinations—Determination of Physical Constants.

METHUEN & CO., Ltd., 36 Essex St., London, W.C.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; *prepaid rate*.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed.

"The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

CONGRESS OF THE UNIVERSITIES OF THE EMPIRE.

Tuesday, July 2.—Morning.—Chairman, Lord Rosebery, Chancellor of the Universities of London and Glasgow, and Lord Rector of the University of St. Andrews. Subjects: (1) Question of specialization among Universities; (2) Inter-University arrangements for post-graduate and research students.

Wednesday, July 3.—Morning.—Chairman, Lord Curzon of Kedleston, Chancellor of the University of Oxford. Subjects: (1) The relation of Universities to technical and professional education and to education for the public services; (2) Interchange of University teachers. Afternoon.—Chairman, not yet fixed. Subject: The problem of the Universities in the East in regard to their influence on character and moral ideals.

Thursday, July 4.—Morning.—Chairman, Lord Rayleigh, Chancellor of the University of Cambridge. Subjects: (1) Conditions of entrance to Universities and the mutual recognition of entrance tests; (2) Action of Universities in relation to the after-careers of their students. Afternoon.—Chairman, Lord Haldane, Chancellor of the University of Bristol. Subject: University Extension and tutorial class work.

Friday, July 5.—Morning.—Chairman, Lord Strathcona, Chancellor of the Universities of Aberdeen and McGill. Subjects: (1) The establishment of a Central University Bureau—its constitution and functions; (2) The position of women in Universities.

FOR the first time the fifty-two Universities of the Empire will meet in council, each University represented by accredited delegates and at six sittings, each presided over by a chairman of the highest eminence, will confer on a matter of the first importance to the solidarity and welfare of the Empire.

We are not forgetting the Conference of Allied Colonial Universities organized by Sir Gilbert Parker in 1903, or the two more recent Conferences on Education as a whole, called respectively by the League of the Empire and the Board of Education, but the first of them sat for a single day, and

at the other two University questions were hardly touched upon.

The Agenda prefixed to this article shows how wide a field has to be covered, and it is to be hoped that some of the more pressing questions will be referred to committees. We are glad to learn that when the formal work of the Conference is over the delegates will spend nearly a month in visiting the other Universities of the United Kingdom, and we have no doubt that more will be gained in the way of imparting and receiving knowledge and so providing a mutual understanding by such informal intercourse than could be effected by prolonged sittings.

The Home Universities Committee, which is responsible for the Agenda, consisted of the Vice-Chancellors of all the Home Universities, strengthened by a few experts, and their discretion is shown even more by the subjects that are omitted than by those that are selected. For instance, the relation of the University to the State and of the staff to the governing body are at once too wide and too thorny questions to be admitted. Even among the subjects to be discussed there is room for the widest differences of opinion, and there is no fear of any one debate lapsing for lack of contrary arguments. But there are two or three topics on which there is universal agreement as to the object to be secured, and here we may hope that the Congress will evolve, at least in outline, a plan of common action. One of these is "Conditions of entrance to Universities and the mutual recognition of entrance tests." At home the diversity of entrance tests is a standing grievance with schoolmasters, though of late something has been done to remedy it; but if a common matriculation standard could be secured there can be little doubt that Colonials would send their sons in far greater numbers to a British University.

If the British Universities would agree to admit any student who had passed a year at a colonial University, this would be a distinct step in advance, and it can hardly be contended that the students so admitted would be inferior in mental calibre to natives who now manage to scrape through Responsions. Cognate to this is the question to be debated under Lord Rosebery's chairmanship of post-graduate study. Here there are no difficulties of revising long-standard regulations; but we want the colonies to tell us how it is that for one post-graduate student that our English Universities attract from abroad, the German Universities attract a score. The cause cannot be ascribed solely to the superiority of German professors, for in classical scholarship, in literature, and in some branches of science we can certainly hold our own. The *vera causa* lies in the fact that so far English Universities have not laid themselves out to encourage or provide for the wants of post-graduate students. How many Oxford or Cambridge students stay up for research work or with any other object except a fellowship in prospect?

As to the interchange of University teachers we are less hopeful of arriving at any practicable scheme. English professors have already been welcomed in the Colonies as *Gäste* and given single lectures or a course of lectures, and Prof. Gilbert Murray has set an example which we hope may be followed, in accepting an invitation to give a whole term's tutorial work at the Ann Arbor University; but to effect an exchange between A and B for a year, or even for a term, would be as hazardous a venture as to arrange a marriage by a matrimonial agency. It may be said generally that it takes a term for the ablest teacher to get into touch with his class and be really effective.

No better Chairman than Lord Strathcona, a born organizer, could be named for the discussion of the penultimate question—the establishment of a Central University Bureau. There is no need to point out the many useful functions that such a bureau might perform—the interchange of University intelligence, official documents, &c., the announcement of vacancies or new posts to be filled, arrangements for lectures by Colonial professors visiting England or English professors visiting the Colonies.

We cannot conclude without again expressing our profound regret at the loss which the Conference has sustained in the death of its first secretary, Dr. R. D. Roberts. Dr. Alex Hill

has stepped into the breach and proved himself a worthy successor, but it will not be forgotten that Dr. Roberts did all the spade work.

The last Imperial Conference on Education was a dull affair, mainly because the Board of Education neglected to make any preliminary arrangements for Colonial readers of papers and openers of debate. The organizers of the forthcoming Congress have not fallen into this vital error. Every item on the agenda has been entrusted to some competent authority, home or colonial, and all communications intended for the Congress will be printed before it meets.

We may again remind our readers that associate membership of the Congress will be open to all who may choose to join on payment of a fee of 10s. 6d.

THE SUPPLY OF TEACHERS.

By "AN OLD FOGEY."

Rate-payer. Is it true that the number of boys and girls who want to be teachers is something like half what it ought to be?

Councillor. I believe so.

R. What are we to do about it?

Teacher. Pay higher salaries.

C. And who is to find the money?

T. Parliament by preference; if not Parliament, the rate-payers.

R. Who are already overwhelmed by the burden of increasing Education Rates!

C. But salaries and conditions of service are better than they used to be. How is it boys and girls are not coming forward?

T. There are several reasons, no doubt, but chiefly because it is more difficult than it was to qualify as a teacher.

C. Why, I thought the abolition of the old system of candidates and pupil-teachers and the preparatory training in secondary schools was a great improvement.

T. So it is for those who can afford it.

R. Afford it! Don't the rate-payers provide free places in secondary schools and other advantages for those who want to be teachers?

T. Yes, and if they had not done so the number of intending teachers would be much smaller than it is. But that is not what I mean.

C. Please explain.

T. Under the old system recruits for the teaching profession were enrolled by a simple process. A boy or girl attending any village school, who appeared to be suitable, was taken in hand by the master for both teaching and training.

C. Yes.

T. There was no disturbance of habit or environment. It was not necessary, at the age of twelve, to attend a secondary school far away from home, or for the parents to incur the cost of better clothing. On the contrary the candidate earned something.

R. And it was a very good system too!

C. This source of supply, you think, is not tapped under the new system?

T. Assuredly not in the rural districts. Innumerable "runners" which swelled the main sources of supply have been effectually stopped.

C. But the quality of the supply, such as it is, has been improved, has it not?

T. It ought to have been, but we are not as yet in a position to judge. I should not like to say a word against any measures to improve the qualifications of teachers. It is possible, however, for a person to possess excellent qualifications without being qualified for a particular purpose.

C. In other words, you think the rising generation of teachers, while better equipped in some respects, may not be suitably equipped for elementary-school teaching.

T. I think it is possible. It follows also that, as the standard of qualification is raised, the number likely to make the effort to reach it must diminish, unless the rewards of service are considerably increased.

C. How much is now expended on teachers' salaries in England and Wales?

T. Over fourteen and a half millions a year.

C. Then an increase of 10 per cent. only would add about a million and a half to the estimates?

T. Yes, and an increase of 10 per cent. would leave the salaries a long way below the standard scale of the National Union of Teachers.

C. It seems to be a promising prospect for the County Councils.

R. And for the rate-payers.

T. And also for the teachers.

REVIEWS AND MINOR NOTICES.

"Home University Library."—*The School: an Introduction to the Study of Education.* By Prof. J. J. FINDLAY. (1s. net. Williams & Norgate.)

To write an introduction to the study of education in a volume of some sixty thousand words that shall at once satisfy the professional student and by laymen be pronounced readable is a task that few living Englishmen could undertake with any chance of success, and we may say at once that Prof. Findlay is one of the few. He has had wide and varied experience both as a schoolmaster and as a trainer, he has studied foreign systems on the spot, and, what is an even more important qualification, he has a philosophic mind. The difficulty may be realized if we turn to the article on "Education" in the Cambridge edition of the "Encyclopædia Britannica"—a composite article not lacking in philosophy, but with no sense of proportion and certainly not readable as a whole. It would be interesting to compare the more nearly cognate monograph of Herbert Spencer which has become almost a classic; but it is enough to observe that the rapid advance of recent years in genetic psychology and the changes in the national system of education have made much of Spencer's work obsolete.

We turn at starting to Chapter V, which the preface tells us contains the heart of the book. For Shakespeare's "Seven Ages of Man" we have five stages of growth or development—infancy or the age of play, childhood proper (roughly from eight to twelve), the age of stability and adolescence (from thirteen to twenty for girls and from fourteen to twenty-four for boys), which may be subdivided into three stages—pubescence, youth proper, and a finishing stage. By determining the characteristics, physical, moral, and intellectual, of each stage (such is the thesis), we obtain a firm basis on which to build our scheme of studies and organize our educational system.

Dr. Stanley Hall has made us familiar with this stratification, and it is in the superstructure, not the foundation, that Dr. Findlay shows his originality and his practical grasp of the problem. He acknowledges that psychology is still in its infancy, and that there is much to be done before we can be said to have mapped out the normal mind. All he insists on, and rightly insists, is that this is the true line of advance. We find in this chapter a glaring instance of the wide differences that still exist among psychologists, or perhaps we should say between the psychologist and the physiologist. Dr. Findlay tells us that "about the age of eight the brain has grown to its full weight." From Sir James Crichton-Browne we learned

the other day that the brain continues growing up to the age of twenty-three, and probably longer.

We are glad to find in so devoted a disciple and exponent of Dr. Arnold a repudiation of the pernicious heresy that youth is the dangerous period through which the lad must be hastened in order to reach the "moral thoughtfulness" of adult life. "To the youth himself the present life affords a sufficiently varied scene. The period is not merely a preparation, but is itself a life; and if it ends there, it has issued not only in promise, but in fulfilment." And the wise teacher who sympathizes with youth will share this view, and, as far as may be, let youth live its own life and work out its own salvation. "Normal submission to custom and environment should be enforced, but variation, and even eccentricity, should not be too harshly judged; variety of outlook and experience, both of men and of things, should be afforded." In fine, the teacher should appear, not as a despotic taskmaster, but a kindly providence.

This raises the difficult question: how far is the teacher justified in imposing his own ideals, his personal philosophy of life, upon the school? Dr. Findlay answers unhesitatingly that in so doing he is exceeding his office. The teacher, he holds, is the servant of the public, and, just as the Civil Servant is forbidden to take an active part in politics, so the teacher must forbear from indoctrinating his pupil with his own ideals of life and conduct if these are in advance of what the author calls the Ethics of the Period. We confess that this seems to us dangerous doctrine. It may be intended as a salutary warning against exalting the school at the expense of the home, and so undermining home influence; but, after all, the teacher, if a servant, is, no less than the minister of religion, a preacher of righteousness, and his righteousness must exceed that of the Scribes and Pharisees, or, as we should put it, of conventional society. We cannot commend the manner, but we have a sneaking sympathy with the sentiments, of a famous head master recently dead. To a parent who came to him complaining that his son was not being taught tots and book-keeping he answered: "I profess to make of boys who are entrusted to me scholars and gentlemen. If you want your son to be taught how to sand your sugar and water your tobacco, you have come to the wrong shop. Good morning."

To return from this digression, we may say briefly that the central theme, though some of the premises appear to us doubtful and some of the conclusions disputable, gives a unity to the treatise and makes it eminently readable. Thus, the argument applies to the teacher no less than to the taught. By it the teacher is no longer a clerical assistant or a drill sergeant, but a member of a learned profession, a man of science who is bound to have studied his special science—child study—and whose qualifications the State is bound to attest and recognize. Again, in a Register teachers will be grouped according to the respective ages of the pupils they teach or are qualified to teach. They will all have been trained and all be members of one body, differing in kind, not necessarily in degree, no group in a position to look down on another group.

This appears to us sound doctrine, and it is not invalidated by the somewhat fanciful distinction that Dr. Findlay draws between the primary and the secondary teacher. The ideal primary teacher, he tells us, is *par excellence* an artist and craftsman, and he will take William Morris as his exemplar. The ideal secondary teacher is *par excellence* the scholar and humanist, more like "The Scholemaster" of Roger Ascham. If we were paradoxically inclined we might maintain, on the contrary, that the one thing lacking to our primary teachers is (as Mr. Holmes rashly asserted) culture, and that our secondary teachers (as "A Public-school Master" maintained in the *Times*) chiefly fail from lack of Art and science.

The points we have commented on have been taken somewhat at random; but, in a volume so matterful and closely packed, the reviewer must pick and choose. If we may vary a hackneyed quotation, "Nullum fere educationis genus quod tetigit non illustravit." There are a dozen paragraphs

we had marked for comment, but we must content ourselves with giving the headings: 1, Denominational schools may claim State aid if supporters are ready to put their hands in their pockets; 2, In public national schools there should be not "a right of entry," but "a right of exit"—i.e. permission for children to receive religious instruction outside the school; 3, Moral instruction should include the elements of biology, sociology, and civics, to be studied through the medium of the Bible and great writers, classical and modern; 4, The corporate life of the public schools should be extended downwards; 5, Each school should have a separate body of managers; 6, The democratization of education should be extended not by more scholarships, but by lowering of fees; 7, Leaving certificates, according to the German plan, should supersede Locals.

The Twymans. By HENRY NEWBOLT. (6s. Blackwood.)

"A Tale of Youth" (such is the sub-title) has two distinct parts—a story of school and college life and the romance of a disputed inheritance. The author's name is sufficient warrant for the *callida junctura*; but either part forms an independent whole, and we shall here confine our attention to the first, which more immediately concerns us as schoolmen. The book is dedicated to Sir Arthur Quiller-Couch "in remembrance of hours when you and I sat together in that bare, high-roofed chamber which is now no longer the Sixth Room." It hardly needed this clue to identify the Downton of the novel with Clifton. The author is careful to warn us that we must not look for a photograph, but rather for the image which appears in a magic Eastern mirror, which reflects not only the actual scene, but, interwoven with it, a vision of the gazer's own thoughts and sentiments. Such a mirror, in a greater or less degree, is every true work of art—portrait, poem, or historical romance; but in Mr. Newbolt's magic glass the leading figures stand out real, life-like, and unmistakable against the background, a blend of fact and fancy. We confess that this admixture offends our artistic sense, though Mr. Newbolt may well plead that he has done for Clifton what Tom Hughes did for Rugby in the most successful of all school novels. But the precedent does not hold good. In "Tom Brown" the Doctor is introduced like Olympian Zeus in the "Iliad"—a power that moves and dominates the whole, but is rarely seen in bodily presence. Here like Percy, the hero of the novel, we recognize "instantly and with the clearness of life the tall, spare figure, the chiselled face with its lofty and remote air, saved from too dominant an austerity by the force of the slightly stooping head." and hear in every sentence "the lingering North-country accent and the unconsciously melancholy cadence that softened its strenuousness with a grave beauty of resignation."

Even more life-like in form and feature is the portrait of Bullingham, "the tall, fair, full-bearded Viking, with huge, loose-hung limbs and frank, unwavering blue eyes . . . exhorting his House like a Skald, thanking them like a victorious Berserk, cheering them with the merriment of a sea-wind, rebuking them with the thunder of a Miltonic archangel . . . rolling on his own hearthrug with the playfulness of an enormous dog." When portraits are so lovingly and faithfully limned the originals can hardly resent being put into a book, but, we must repeat, it is not the highest art.

But the story is more than a gallery of character sketches; it presents Clifton as the ideal of a public school, an advance on the Rugby of Dr. Arnold in so far as it combines home life with the life of a boarding house. The standing quarrel between a scientific and a literary education is freshly and vigorously fought out by Percy's two guardians, and the conclusion reached is that the essence of education is adventure and service, medieval knight-errantry stripped of its externals and adapted to modern conditions; and the idealist has the last word in the argument. "My dear Ronald," said Mr. Manby, "I accept your phrase—science is a pilgrimage to the shrine of truth. But it is the only part of my life that has given me any peace." "Mere science may be peace," said Roland, "but life cannot; life looks beyond science. 'Inquietum est cor nostrum.'" Horace, Virgil, Dante, and Keats,

not Darwin and Huxley, are the hero's teachers at Clifton, and the *genius loci* is in the chapel and on the cricket ground, not in the laboratory or on the downs and wooded banks of the Avon. We feel no temptation to intervene or discuss how far such a course is suited to the average boy, or to what extent the home-boarder element leavens the whole lump. We are content to accept the glorified picture of Clifton as seen in the author's mirror—that is, through a golden haze. If "Tom Brown" is the best presentment of public-school life, the lines ending "*Sed miles, sed pro patria*" are the very quintessence of the public-school spirit, and Mr. Newbolt's prose is nearly as good as his verse.

Roman Stoicism. By E. V. ARNOLD. (10s. 6d. net. Cambridge University Press.)

Since the days when Burton in "The Anatomy of Melancholy" could disparage Zeno and Chrysippus as "two doting Stoics" the doctrines of the Porch have risen in honour and have attracted much penetrating inquiry. If Zeller be deemed now out of date, two good summaries of them (with *Belegstellen*) are accessible: one in Überweg's "Grundriss," the other by von Arnim in the "Allgemeine Geschichte der Philosophie." Mr. W. L. Davidson and Mr. R. D. Hicks have recently published studies in Stoicism. Now comes Prof. Arnold, of the University College of North Wales, with a fine book on the subject, which has grown from a course of lectures into a complete treatise, admirable in arrangement, equipped with supporting passages for the use of the scholar, yet intelligible enough to the reader without Latin and Greek who may go to it in quest of philosophic truth. Stoicism is no more a dead philosophy than Greek is a dead language.

We have said that this is a fine book; we feel inclined to go further and to say it is a great book. It has a width of view that differentiates it from the ordinary classical handbook. The author is in touch with modern thought, as he shows in such remarks as this: "The broad monistic principle 'all things are one' is meaningless apart from some kind of interpretation in dualistic language." He writes of the Stoics with sympathy, his opinion being that "to understand Stoicism fully a man must himself become for the time being a Stoic." If we might hint a fault it were that his expositions do not always carry absolute conviction with them; thus the strange contention of the school that quality (*ποιότης*) is a body would seem to be set forth in a more plausible form by von Arnim (*l.c.*). But the evidence for Stoic doctrine is in some cases imperfect; nor can we think that the system was ever kneaded into a self-consistent whole. Much of it appeals even to our own age at least as profound and noble speculation; its influence has been vast. Prof. Arnold rightly feels that he has a fascinating theme to handle, and his readers will find that he has handled it worthily. His chapter on the Stoic strain in Christianity is of singular interest. In it he holds out a hand to commentators on St. Paul and to theologians in general; who will grasp that hand with welcome and who will spit upon it we are not disposed to consider. He is on safer ground when, in the midst of a learned discussion, he claims for "The Ingoldsby Legends" rank as a classic. The claims of his own book to greatness are not impaired by this chance revelation of good literary taste.

Even a brief account of the Stoic philosophy could not be attempted here; but we may indicate slightly what it had to say about education. According to Zeno, the instruction of youth in grammar, music, and gymnastic was worthless, for the true education was in virtue. But Chrysippus qualified this dangerous tenet by laying down that these studies are useful as a training preliminary to virtue. Since the Stoics argued "*contortulis quibusdam et minutis conclusionibus*" (Cic. "Tusc. Disp." II, 42) that pain is not an evil, it might have been supposed that they had no objection to corporal punishment in schools. But here, like modern pedagogues, they differed; for, whilst Chrysippus approved of the rod, Seneca at a later date was all for gentleness and admonitions. Boys and girls must be educated alike, the virtues being the same for men as for women. All children should learn to

eat and drink in a decent way, to refrain from loud talking and laughing, to express themselves in respectful and courteous words. Right doing must be taught before the reasons for it: "Imbecillioribus quidem ingeniis necesse est aliquem praeire—'hoc vitabis,' 'hoc facies.'" To be cheerful, to banish depression, is incumbent on both teacher and pupils; for the latter it is not proper that they should be set to grapple with the real, stern problems of life, and games and amusements should be permitted to them. Children ought to obey their parents, but with restrictions imposed by reason; the command of the universal Father is of greater urgency.

Twelve Cambridge Sermons. By JOHN E. B. MAYOR. Edited with a Memoir by H. F. STEWART. (5s. net. Cambridge University Press.)

This is no ordinary volume of sermons which can be dismissed with an epithet as expository, edifying, eloquent, or commonplace. They all bear the impress of a strong personality, but they speak in diverse manners—some simple Gospel pleadings that might have been preached to a village congregation, and some the outcome of laborious days passed in the University Library or the College Muniment room, that might form a chapter in a "Fasti Cantabrigiensis" or a "Church History"; and the sermons are annotated almost as fully as the author's "Juvenal."

The brief memoir supplies all that we need know of the author's life. He came of an evangelical stock, but, while *pietas* was the key-note of his life and to the end he was true to the faith of his fathers, he was never enslaved by the Puritan rule "that doth the human spirit cool." A zealous Protestant, he did full justice to Romanist worthies, and to the Old Catholics he extended the right hand of fellowship. Intolerance in the Church of England no less than in the Church of Rome he abominated, and the persecution of Bishop Colenso and of F. D. Maurice roused his righteous indignation. As a scholar he had the virtues and defects of Browning's Grammarian. He worked with the microscope rather than with the telescope, and he never scaled any specular mounts. The *πάντολος ἀμαθία* of the sciolist was a red rag to him. He finds *adiutorium* given as a real word by "Freund and his tail," and notes that it occurs thirty-nine in the Vulgate, and so on for a score of writers whom he names. For the lectures of his last two terms he had but a single auditor, but to him he poured out his vast stores of learning. A strict vegetarian and teetotaler himself, he never sought to impose his rule of abstinence on others nor condemned those who differed from him as publicans and sinners.

Tolerant and genial as he was both in his life and in his writings, it is hardly a paradox to say that he would have been stronger and better for some human foibles. "Our hours of amusement (he writes) are wholly and always lost." Novels (we are told) later than the Clementine Recognitions he hardly touched. Had he relaxed he would, we think, have written otherwise of Leslie Stephen and "The Dictionary of National Biography," and not pronounced J. H. Newman the most over-rated man of the century, and have thought twice before comparing H. R. Luard and the prophet Isaiah. But his failings all leaned to virtue's side, and to an age of high living and lax thinking he was a preacher and an exemplar.

Nouveau Dictionnaire de Pédagogie et d'Instruction Primaire. Publié sous la direction de F. BUISSON. (30 fr. Paris: Hachette.)

It is just thirty years since the first edition of Monsieur Buisson's Dictionary of Pedagogics appeared. The alterations in the present work are so extensive that it may fairly be called, not a second edition, but a New Dictionary. The two volumes of three thousand pages have been compressed into one volume of two thousand pages. This has been effected mainly by judicious omissions and curtailments, but a number of articles have been wholly rewritten and others have been added, in particular on the great educators of all countries. Add to this that in 1880, when the Dictionary was on the eve of publication, the "Lois Ferry" were passed, a measure which

revolutionized French education more radically even than the Balfour Act of 1902. The work of the New Dictionary has been to record and weigh the results of this legislation.

Of the rewritten articles the most important are "Germany," by Dr. Rein, and "England," by Dr. Sadler. The latter is a model of skilful condensation. English educationists fare badly: of the twenty-four names mentioned in the preface Herbert Spencer is the only Englishman. Thomas Arnold is despatched in a dozen lines and Matthew Arnold is ignored. Among desiderata we note "Assistants" excluded, we suppose, as employed only in secondary schools and "Tolérances," though we discovered the information we required under "Orthographie."

The price, compared with the two Cyclopædias of Education in course of publication in America and England, is remarkably low, but we cannot approve the change to a single volume. It is too bulky to hold in the hand, and if unbound would come to pieces in a week. We tender our sincere congratulations to Monsieur Buisson on completing for the second time a Herculean labour which has been to him a labour of love.

Iliad Pocket Book. Arranged by S. E. WINBOLT. With an Introduction by Prof. T. H. WARREN. (2s. net. Constable.)

We have commended Mr. Winbolt's "Pocket-book Horace" and with fainter praise his "Pocket-book Virgil," but a selection of the beauties of Homer seems to us a fruitless undertaking, no more representative of the epic than "The Beauties of Shakespeare" (whose author, some would say, deserved his fate) is of the drama. It would, indeed, be possible to give in the same space the main story of the "Iliad" by means of extracts and brief analyses of the parts omitted, but here there is no attempt to tell the tale of Troy, and we have instead Homer on Gods, on Men in General, Men in Particular, Animals, &c. The translation that faces the text is a revolt against "the excessive archaism and cloying artificiality" of Messrs. Lang, Leaf, and Myers, and inclines rather to the blunt version of the late Samuel Butler, misnamed in the preface, by a curious oversight, Mr. A. J. Butler. With some reservation, we may allow Mr. Winbolt's claim that it is accurate and sincere. All the constant epithets are omitted, and the co-ordinate sentences of Homer are commonly rendered by subordinates. The manner of Homer, his old-world simplicity, is deliberately sacrificed. Who, for instance, would recognize Homer in "He went on his way in the style of a young prince with the new down on his chin, like a youth in the heyday of his beauty?" On page 26 "slim-waisted" misrenders *βαθυδάκτυλον* and *τινα* is not "Trojan women," but one in particular. In our copy pages 65 to 80, by a mistake, we suppose, of the binder, have been duplicated.

"Home University Library."—*Landmarks in French Literature.* By G. L. STRACHEY. (1s. net. Williams & Norgate.)

We want a preface, an uncommon want, to tell us the author's aim and scope. The title, indeed, shows that we must not look for a short history of even outlines, and the conclusion states that the sketch is carried down to the present day with Maupassant and Verlaine for the two last "Landmarks," but we should have liked to know the class of readers for whom it is intended. Is it meant as a Pisgah sight to stimulate the explorer, as a guide-book to be consulted on his travels, or as a standard by which the ripe student may check his own impressions and get a bird's-eye view of the country he has traversed? Whatever may have been the author's intention, it is undoubtedly the third class of readers that the book will best serve. Space precludes any specimens, and even quotations of single lines or phrases are rare. Moreover, the works commented on are selected rather on account of their historical significance than their intrinsic value, and a student's guide would contain a very different list. With this proviso, we can unstintedly praise the "Landmarks" for their breadth and clearness of view and the even excellence of the style. There are, of course, omissions, the gravest of which, in our judgment, is the neglect of the learned and philosophical side of French literature. Theology, for instance, is wholly ignored. We look in vain for Joseph de Maistre, Malebranche, Descartes. Renan is known only as a historian, bracketed with Michelet—"a suave and lucid style adds the charm and amenity which art alone can give." We miss, too, such famous names as La Bruyère, Bernardin St. Pierre, Mme de Staël, Beranger, P. L. Courier, and, among recent writers, Sully Prudhomme, Dumas fils (the elder Dumas is just named in passing), Daudet, Zola, and Anatole France, but this defect is infinitely preferable to the opposite one of overcrowding the map with names.

Messrs. Nelson send us the first volumes of their complete works of Victor Hugo—"Les Misérables" (4 vols.), "Les Contempla-

tions," "Napoléon Le Petit," "Ruy Blas" and "Les Burgraves," "Han d'Islande." The format is the same as that of the popular "Collection Nelson." Two volumes a month will be published, price 1s. a volume, and the whole will consist of fifty-one volumes. Comparatively few of our readers are in a position to give such a big order, but there must be hundreds who will avail themselves of the offer of such a volume as "Les Contemplations" at a price and in a form which even Belgian pirates have not been able to rival.

A Junior German Grammar. By H. C. A. SECKLER.
(2s. 6d. Methuen.)

Mr. Seckler, Senior German Master, Owen's School, Islington, London, has made his book for the middle forms of schools that prepare candidates for the Oxford and Cambridge Local Examinations and for the examinations of the College of Preceptors. Specimens of the examination papers are appended. Practical convenience rather than scientific accuracy appears to be the author's aim. He implies that *Doktor* is accented on the -or, and, according to his rules, *die Bucht* forms in the plural *die Büchte*! We write *nichts Neues*, not *nichts neu*. *Entbehren* in common language is constructed with the accusative; with the genitive it belongs to the elevated style. The distinction between *die Läden*, the shops, and *die Laden*, the shutters, does not hold good in practice. It irritates us to see that English boys are still being taught that they must not modify the vowel of *blass* in the comparative, whilst German authorities allow both *blasser* and *blässer*. So *kärger* is officially recognized beside *karger*. Indicating some faults, we have no wish to imply that the book is not usable.

Eine Auswahl Deutscher Sprichwörter mit den Englischen Äquivalenten. A Selection of English Proverbs with their German Equivalents. Compiled by CLARA BLUMENTHAL.
(1s. net. David Nutt.)

The compiler is more at home with German than with English. Many of her "English Proverbs" are not proverbs and some are not equivalents. "There are more ways than one to the wood" is not an equivalent of "Alle Wege führen nach Rom"—the first in the book. Præd's "There are many ways to Rome [and more than one to Heaven]" comes nearer. "The road to ruin is paved with good intentions." English is no more squeamish than German in naming Hell. "Good things come over night." Why not the literal translation, "For so he giveth his beloved sleep"? Why not "Walls have ears" instead of "Little pigs have long ears"? "Wer A sagt, muss auch B sagen" is not the equivalent of "In for a penny, in for a pound." "He who hunts two hares leaves one and loses the other" is neither a proverb nor the equivalent of "Niemand kann zwei Herren dienen." The little book is clearly printed, and the author should get some English friend to revise it and cut out the numerous repetitions.

Broad Lines in Science Teaching. Edited by F. HODSON.
Second edition. (Christophers.)

Dr. Hodson has collected in this book some twenty papers or essays dealing for the most part with the teaching of science in secondary schools. The papers are written by different authors, and in each case the writer may claim particular fitness for his task in virtue of his training and experience. The editor has cast his net widely, as may be judged from the titles of a few of the chapters now given: The Scope of Nature Study, The Teaching of Nature Study, Biology in Schools, The Teaching of Hygiene, School Mathematics in Relation to School Science, Geography, Economic Science in Secondary Schools, Domestic Science, Teaching of Chemistry in Technical Schools, How the School may help Agriculture, Engineering. One also finds other essays of a more general character, such as: The Place of Hypotheses in Science Teaching, The Claims of "Research" Work and Examinations, Science in the Teaching of History, The Present Condition of Physics Teaching in the United States. Although one may not always agree with the expressions of opinion put forward by the various writers, it is a book which is worthy of the attention of all schoolmasters whether they are, or are not, engaged in teaching science, and Dr. Hodson has done a good work in bringing together a most useful and interesting set of papers.

Types of British Vegetation. By Members of the Central Committee for the Study and Survey of British Vegetation. Edited by A. G. TANSLEY. (6s. Cambridge University Press.)

This is a first attempt at a general treatment of the vegetation of the British Isles from the ecological standpoint. Facts and data are brought into line from various sources; some accounts are based on the results of researches yet unpublished. We have a surprising amount of subject-matter in a volume of moderate size, an up-to-date summary of investigations—a much needed and handy reference book; but the reader looks in vain for maps. Well prepared vegetation maps and diagrams, for instance, which visualize the actual distribution of the chief forms of vegetation and impor-

tant tracts of different soils, would render whole chapters more coherent. Many of the illustrations are reprints from original photographs of contributors; they are worth more space and better reproduction.

Practical Botany. By J. Y. BERGEN and O. W. CALDWELL.
(6s. Ginn.)

The title of this book is somewhat misleading. It is a reader, and not, as might be supposed, a book of instruction for laboratory work; it is practical in the sense that topics are approached and discussed as they affect everyday life rather than from the strictly botanical standpoint. The idea is commendable, and it is a relief to get away from the monotonous routine and treatment of subjects to be found in the usual "general elementary textbook." It is well, also, on occasions, to have collected information of even an elementary kind on practical applications of botanical science. At the same time, English pupils are handicapped in using a textbook which constantly refers to plants unknown to them by name, and likely to remain unknown to them by sight. Ten chapters are given to the great groups of plants, a skilful boiling down of numerous ingredients; facts of classification, life history, and structure; the relation of plants to disease, with numerous details of economic interest and importance. Forestry and plant breeding are sketchily dealt with, and there is the usual chapter on Ecology.

The Teacher's Encyclopædia. Edited by A. P. LAURIE. Vol. IV.
(8s. 6d. per vol. Caxton Publishing Company.)

This volume treats wholly of the physical side of education. An article (it might well be called a pamphlet) by Dr. W. B. Drummond, of Edinburgh, on "Child and School Hygiene," with some account of child physiology and pathology, including the commoner children's diseases, occupies three-fifths, and the remaining eighty pages are distributed among seven contributors, of whom the best known are Dr. Hogarth on "Medical Supervision," Mme Oesterberg on "Gymnastics and Games for Girls," and Mrs. Kimmins on "Play." Dr. Drummond's article is well illustrated, but we question how far much of it lies within the province of the teacher; and we hope no teacher will be rash enough, on the strength of the first plate, to diagnose a case of scarlet fever or measles. We, hope from the publisher's note, that the volumes may now be obtained separately, but this point is not made clear.

The Schoolmasters Yearbook and Directory, 1912.
(12s. 6d. net. The Yearbook Company.)

This Yearbook grows in bulk and also, we regret to add, in cost, which, for the average assistant master, is the equivalent of a penny income-tax; a dire necessity, we doubt not, but he will exclaim, "There is no living with it or without it." The present Directory contains between fourteen and fifteen thousand names of masters, and the list of schools reaches some fifteen hundred. The Editor accepts the calculation of a well informed friend that it would require a considerably larger volume than the London Post Office Directory to publish the names and qualifications of teachers inscribed in the New Register. This seems to us the wildest of guesses, for till the Council has sat no one can tell what the conditions for admission will be, nor even after that how many teachers will think the recognition worth a guinea. But we subscribe to the rider that the publication must be by sections. The new teachers in Column B of the old Register would not have numbered more than a third of those in the Yearbook. There are no new features in this issue, but we have read, as usual, with profit and interest the "Review of the Year." In the paragraph on Sir Robert Morant the editor shows great tact in speeding the parting guest. We miss an obituary, and the death of Dr. R. D. Roberts has been overlooked. It is not stated, as in previous years, that "Other Educational Associations" is borrowed from *The Journal of Education*.

The Public Schools Yearbook, 1912. Edited by H. F. W. DEANE and W. A. EVANS. (3s. 6d. net. The Yearbook Press.)

This Yearbook, now in its twenty-third year of publication, is too well established to need any description or commendation. It has the advantage of official recognition from the Head Masters' Conference, and the drawback that it includes only the hundred and odd schools represented at the Conference and such preparatory schools as pay for the privilege. There is, besides, a large amount of valuable miscellaneous information. We miss any reference to the important alterations in entrance examinations announced by the Head Masters of Harrow, Eton, Winchester, and Rugby; to the Boy Scout movement, and, under Bibliography, to recent Public School novels.

Chaucer Redivivus: a Playlet for the Open Air or Hall.

By WILLIAM SCOTT DURRANT. (6d. net. Allen.)

The plot is ingeniously contrived to exhibit in character all the Pilgrims of the Canterbury Tales. As they are returning from the shrine Harry Bailly informs them that the Wyf of Bath has

announced her intention of choosing from among them a sixth spouse, and she passes them all in review. The dialogue is lively, and the mean between Chaucerian and modern English is happily hit. We can heartily commend the play as a good illustration of the dramatic method in teaching.

MATHEMATICAL BOOKS.

A New Geometry. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. (2s. 6d. G. Bell.)

This is a condensation of the larger work on elementary geometry by the same authors. If anything should hinder this latter work from passing on to its seventh edition it will be the appearance of this most acceptable "new geometry." The book carries the pupil from the preliminary practical work right on to solid geometry, and both choice of matter and order of development are excellent, and will ensure the book a speedy success.

Geometry for Schools. By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A. (Vol. I, 1s.; Vol. II, 1s. 6d. Bell.)

These volumes are the first two of a series which is to be complete in six volumes. The first contains a practical preliminary course. The only thing we would question in this volume is the desirability of the method of presenting geometrical facts for verification. This seems in a measure to defeat the aim of the practical course for the attitude of the pupil who is merely experimentally verifying stated facts is very different from the attitude of one who is discovering facts under guidance. While sympathizing with the authors' desire to avoid "any energy being wasted on mere playing with compasses," we think this state of affairs mainly arises from lack of guidance or choice of unsuitable matter, but we are not prepared to go to the other extreme and do away with method of discovery altogether. A skilful teacher, however, can use the matter of the book without strictly adhering to the method of presentation. The second volume contains rigid and deductive proofs covering the matter of Euclid I, 1-34, and, in addition, important and well known riders, such as those on concurrency, treated as theorems. It forms a very suitable and excellent course to follow after the preliminary practical course. Numerous and well graded exercises are a feature of both volumes.

Junior Mathematics. A Course of Geometry and Algebra for Beginners. By DAVID B. MAIR. (2s. Clarendon Press.)

The course on experimental geometry is sound and helpful, but the course on algebra, which, beyond a graphical demonstration of multiplication, only deals with square and cube root by graphs, and an explanation of algebraic square root, seems to us not to be by any means the best introduction to algebra.

"Nisbet's Commercial and Technical Series."—(1) *Commercial Arithmetic.* By S. and C. F. ASHWORTH, B.A. (2) *Practical Mensuration.* By A. J. DICKS, B.A., B.Sc. (1s. 6d. each Nisbet.)

Straightforward practical textbooks, well calculated to serve the purpose for which they are intended.

Practical Geometry. (10d. net. Grant Educational Co.)

On the whole this is a satisfactory little textbook, and will help the teachers who feel rather astray in planning out a practical course in geometry. We think it unwise to introduce the formal constructions for the making of an angle equal to a given angle and for the bisection of an angle, as these do not lend themselves at this stage to the method of discovery, also the equality of triangles we think is best first realized by the consideration of how much data is required in order to make an exact copy, rather than by the method of superposition.

OBITUARY.

MISS ROSA MORISON.

THE sudden death of Miss Rosa Morison, Lady Superintendent of Women Students at University College, and Vice-Principal of College Hall, Byng Place (a Hall of Residence for women students at the School of Medicine and University College) leaves a gap in academic circles that will not be easily filled. Her position as regards the women students of London was indeed unique. Special circumstances at University College led to the creation of the office she so ably and so tactfully filled there for twenty-nine years; and her work at College Hall, extending over more than fifteen years, gave scope for the exercise of those qualities of heart and mind that made a lasting impression on those privileged to work with her. A procession of five hundred women students followed the body from College Hall—where she died—to take part in the funeral service at St. Pancras Church; and the adequate perpetuation of her memory, in tangible form, is now under consideration.

UNIVERSITIES AND SCHOOLS.

OXFORD.

I reported in my last communication that the prospects of Reform from within would very largely depend upon the fortunes of the Statute establishing a Finance Board. Rumour asserts that the Chancellor attaches more importance to this proposal than to any other part of his scheme of reform. The Statute proposes to have a central board consisting of members of Convocation, of whom it is hoped a considerable number will be men able to bring an experience of affairs outside the University to bear on University finance. Its powers are all powers of publication and advice. Its main work will be to review the University accounts, the college contributions, and prepare a budget for the University. The Statute met with some opposition when first introduced, but that was overcome, and there seemed every prospect that it would pass without difficulty when there came a bolt from the blue. On the Sunday morning before last each member of Congregation received a thick pamphlet of over forty pages from the President of Corpus, arguing that the proposed statute was illegal. The President makes a review of the history of the colleges in the University, long but eminently clear and readable, in which he argues that the colleges are corporations entirely independent of the University in origin; that inasmuch as the University only became a corporation later, it has only such powers over other corporations as have been expressly granted to it by the State; that the State has never given the University power over college finance except in the Act of the last Commission, and that in that exceptional instance which the President deplures, the powers of the University are very clearly defined and cannot be exceeded. The only weak point in the President's contention is the assumption that a Board whose only powers in regard to colleges are advisory can be said to interfere with the powers of colleges over their finance.

On the following Wednesday the Hebdomadal Council published an opinion which they had received from the counsel of the University a year ago, in which he stated that, in his opinion, the proposed Statute was within the competence of the University. It is not for laymen to intervene in such a discussion. Counsel seems to hold that the Act of 1877 limited the powers of the University; the President certainly argues that it gave the University all the powers it has. The Statute came before Congregation on the 20th, and the President stated that he had written his pamphlet having known of counsel's opinion, though at the time of writing he could not refer to it as it had not been published; that he did not intend to vote against the Statute at this stage, but would oppose it in Convocation, and that he would not invite any outside members of Convocation to attend, as he thought this a matter for residents to settle. For that, no doubt, remembering the President's achievements in the matter of the Greek Statute, we should be grateful.

It is impossible to say what will happen. But one thing is clear. If the President is right, reform from within is absolutely impossible, and a Commission is certain. For it is quite clear that the University has not the power to reform itself, and would not have it even if Convocation were removed or reformed. Those members of the University who are dissatisfied with the prospects of reform from within may therefore still have cause to be grateful to the President of Corpus.

The Literae Humaniores Board has been occupied this term with proposals for courses in philosophy alternative to Greats. Dissatisfaction with the existing state of affairs has two causes. No one wants to change Greats, but it is felt that there are an increasing number of students who are debarred from the study of philosophy by their weakness in classics; and also, that it is impossible, under the existing system, to study philosophy and especially modern philosophy with sufficient thoroughness. A committee of the Board had drawn up two schemes. The first followed the present Greats course in its combination of philosophy with ancient history, but proposed to make it possible to give up the parts of Greats involving Greek and to compensate for that by a thorough study of modern philosophy. The second scheme proposed a new school combining philosophy and science. The principle behind it is that the literary and historical approach to philosophy is provided for in Greats as well as it could be and that any attempt to duplicate it would harm Greats, but that a combination of philosophy with science would be equally to the advantage of philosophy and science. The Board referred both schemes to the meetings of lecturers in classics, in ancient history, and in philosophy. The first scheme met with almost no support, but the second was more welcomed, especially by the philosophers, and it seems probable that attempts will now be made to work out something on those lines, though whether it will take the form of a new Final School or a diploma cannot yet be told.

The Annual Report of the Delegacy for the Training of Secondary Teachers was presented to Congregation on the 20th, and at the same time a decree was proposed that a grant of £300 a year for three years from January 1913 should be made from the chest to the Delegacy. The Delegacy, as Mr. Matheson explained, has suffered like other people from the behaviour of the Government in the matter of a Teachers' Register. The report is not encouraging. It was hoped when it was established that the Delegacy would become self-supporting as students became more numerous, but the report shows a steady decrease in the number of students and a worsening of the financial position of the Delegacy. Mr. Matheson pleaded that the new prospects of a Register very materially altered the situation, and that if the Delegacy was kept going for three years more the Delegacy would be given a fair chance, but that it would be most unfortunate if its work was allowed to come to an end just when there seemed a chance of its prospects very materially improving. Opposition was offered on the ground that the University ought to have had longer opportunities to consider all the facts and make up its mind whether the work of the Delegacy was worth continuing. The Decree passed Congregation and will come before Convocation probably before the end of term.

Among the various suggestions which have been evoked by the widespread dissatisfaction with the entrance examination known as Responsions, the latest is the proposal that some sort of scientific knowledge or training should be required of all candidates. The difficulties of carrying such a change are doubtless very great, and not the least is the great difficulty of getting anything like agreement as to the standard, the method, and the details of any such examination. For one thing it would greatly increase the complexity of the examination for Responsions to add a new and somewhat indefinite subject to the compulsory subjects already exacted; and a great deal more time and discussion would be required before the schools could accept willingly such a change. There is much to be said for the principle that every schoolboy should have a chance to learn *some* science; but it is doubtful whether this is best achieved by a change in Responsions.

The formal gathering at Ruskin College on February 8 was a great success, not only for the large audience it drew and the great interest it evoked, but in particular for the excellence and eloquence of the speakers. The proceedings were opened by Mr. Appleton, the Secretary of the General Federation of Trade Unions, and he was followed by Mr. Sydney Buxton, M.P., and Mr. Bowerman, Chairman of the College Committee. Two ladies, who laid the first stones, made short and effective speeches. Then came Mr. James Sexton and Mr. Ben Tillett, Secretaries of the Dockers' and Riverside Labourers' Unions respectively. After Mr. Tillett came Mr. Sidney Ball, and Mr. Lees Smith, M.P., moved the vote of thanks.

Deaths.—A. T. Barton, Senior Fellow and Tutor of Pembroke, died on January 31, 1912, aged seventy-one; born in 1840. Formerly Exhibitor of Corpus (1860), First Class in Mods. and Greats, 1865 elected Fellow and Tutor Pembroke. For forty years engaged on translation of Shakespeare's Sonnets: the University Press declined to publish them. Rev. A. M. Fairbairn, M.A., D.Litt., for twenty-three years Principal of Mansfield College (1886-1909); died in London on February 9, aged seventy-three. Rev. E. D. Whitmarsh, D.C.L., twenty-four years Vicar of Sandford-on-Thames, of St. John's College; died in Oxford on February 12, aged seventy-one. T. E. Rogers, M.A., formerly Fellow of Corpus, sometime Recorder of Wells, Chancellor of the Diocese of Bath and Wells, and for twenty-two years Deputy-Chairman of the Somerset Quarter Sessions, died at Wincanton, Somerset, on February 12, aged ninety-four.

CAMBRIDGE.

The term began with the death of a well known and much respected College Lecturer—Mr. W. M. Coates, of Queens'. Mr. Coates was an Irishman, a graduate of Trinity College, Dublin, and a Mathematician. In University matters he was reckoned a Conservative, and he certainly led the opposition to the movement for the abolition of the Senior Wrangler. He was a man of strong convictions which he did not shrink from expressing—a man, too, of so high a Christian character and so kind and genial a nature that one could differ from him in opinion and fight him in public issues, and love and respect him none the less. Some years of acute illness and perpetual menace preceded his death, and it was remarkable throughout how little they affected the sunny disposition of the man, always bright and with all his fund of nonsense always serious.

In the next place we have to record two benefactions made to the University. The Governing Body of Gonville and Caius College place the sum of £500 in the hands of the University Association for transference to

the University to be invested for the maintenance of University buildings, expressing the hope that it may be devoted in particular to the new buildings for physiology and experimental psychology. It is a thoughtful and friendly gift, of an unexhilarating character which makes it in a sense the kinder. There is a certain attractiveness in the idea of founding a scholarship—not quite so much in the case of a chair—a good deal when it is a laboratory—and attaching one's own name to it for ever. But a gift allocated to so humdrum a purpose as this gift of Caius College is rare. The benefactor very often—and not unnaturally or wrongly at all—leaves the University to look after his gift once received, and the University is glad to do it. It cost some £10,000, if my memory serves me, to get the Acton Library brought here, classified, catalogued, and set in working order—a large sum, but it meant a great deal of very expert labour, and it was worth it, and we are grateful to Lord Morley. But even so, it is sometimes hard to find the money to meet the requirements of great and welcome gifts; so the precedent set by Caius College is one that appeals. Buildings do cost a great deal to keep up. In these last few weeks, for instance, a crack has appeared in the new Law buildings—due to the pull exerted upon them by the Anthropological Museum which has just got its roof on and has proved, perhaps, rather heavier than the foundation was able to stand. I do not speak as an expert, but I have seen the crack. Of course, a good many Cambridge buildings were affected this way when the new drainage arrangements were completed between ten and fifteen years ago, but fortunately the cracking did not spread far. The Cambridge soil was peculiarly damp, and the draining altered everything. Even out at Girton College some years ago a specially dry summer cracked one of their buildings. In such need do we stand of maintenance funds. The other benefaction is one made by Dr. Jamieson B. Hurry, of St. John's College, to commemorate Sir Michael Foster. It is to be the Michael Foster Studentship in Physiology, awarded in every other year and of the value of £100. The student is to carry on research in Cambridge, unless he has special leave of absence.

The Board of Education has been in communication with the Vice-Chancellor and the Council with regard to the study of Solar Physics and the building of an Observatory for that purpose. We are to receive a capital grant-in-aid of £5,500 and an annual one of £3,000. The Board of Agriculture and Fisheries is prepared to recommend a grant of £18,000 to cover the capital, &c., required for a farm and the accommodation necessary for two Research Institutes in Plant Breeding and Animal Nutrition, and an annual grant which is provisionally set down at something between £4,000 and £5,000 to maintain the two studies in working. These grants and proposals are the more welcome in that some years ago the Government (not this one, if I remember, but the previous one) swept away Forestry to Oxford, with the result that students of Forestry preparing for India had to leave us for the sister University.

The proposals for the improvement of the existing scheme of the Classical Tripos drew a discussion of some length in the Senate House some three or four weeks since. The scheme was not revolutionary enough to please some of the older dons—curiously enough these seemed all to come from one college—but in the main the men most closely concerned with the daily round of classical teaching proved to be those best satisfied with the big changes of twelve or fifteen years ago and most wishful to continue the present system with some slight adjustments of details, which practice has shown to be desirable.

This has brought up the old question of Verse Composition, on which, as might be expected, the authorities are divided. Some would frankly abolish it; some would allow a substitute; and others again would maintain it, like the British constitution, as the most valuable asset of our national culture, and so forth. It is quite clear that it is not going to be abolished, and the substitute suggestion languishes because nobody has proposed a substitute that at all commends itself to the Classical Board as in any way equivalent in mental discipline or educational value of sheer worry and long labour to verse composition. When one thinks of the years most classical men have given to it, it is ludicrous to suggest that a set book or some questions in syntax could be equivalent. And, when all is said and done, for those who at all enjoy verse composition—and whether they can do anything worth while at it does not in practice measure the enjoyment felt in trying—there is something in it that brightens and illumines their work. It means a closer association with both Greek and Latin and English poetry than some people think; and "ces luttres prolongées avec le texte," to use a phrase of Sainte-Beuve, are peculiarly fruitful to those who undertake them. After all, there is enough peptonized education nowadays ready in tins, as it were, for prospective Civil Servants, and something might be left for men who lean to scholarship and would pursue it all their days, if only they could be let alone.

This leads me to a question which, I learn, is being debated in print somewhere or other: Whether the modern undergraduate is degenerate? It is a jolly subject for a controversy in correspondence columns, especially when you don't know much about the undergraduate at close quarters. It might be urged that the clothes he wears nowadays and his habit of using hair oil indicate degeneracy (the latter, certainly to men of my time, looks horribly ominous). He spends more, perhaps, on luxury—especially in motor-driving—than he used to; and he has things made easy for him—supervisors of studies to make his intellectual work less of a tax at some colleges—discipline, too, is "nicer" than it used to be. But, first and last, for my own part, as far as I know the modern undergraduate here, I have a great respect for him. I don't admire his clothes, but in very many ways he seems to me—no, I can't carry this sentence through in the singular as if the modern undergraduate were a type—there are ever so many types, and what I want to say is that many of them seem to me to think on a higher plane of social service and personal religion than was the case generally twenty years ago. So, if any of your readers are worrying about it, let them remember that since the dawn of time "these have been degenerate days," as people say; only just now, things—some things—wear the beauty of promise in a new way. At least that is my impression and it rests on a pretty wide experience of the student world.

We are having, as usual, a great abundance of extra lectures—
Lectures, Etc. Mr. William Temple on "Religion and Ethics"; Mr. W. P. Ker on "English Literature"; Sir J. J. Thomson on "The Dynamics or Vagaries of a Golf ball"; Bishop Moule on "Henry Martyn"; others on "Babonic Plague," "Labour Unrest," "Indian Unrest," and so forth; the President of the Navy League and Mr. Norman Angell at the Union.

Dr. Shipley, the Master of Christ's, has had his portrait presented to him, and discovered that, if he is as many-sided as his friends suggest, he must be virtually spherical.

WALES.

On Saturday, February 10, there was an interesting gathering of quarrymen from the principal quarries of North Wales, at the Bangor College, under the auspices of the Workers' Educational Association. This branch of the Association has only recently been formed, and it is a tribute to the keenness of the quarrymen for self-improvement and culture that a high standard of work has already been attained. The teacher in charge is Mr. R. Richards, Lecturer in Economics at the College. On the above date, the classes were addressed by Mr. Mansbridge, the General Secretary of the Association. He was evidently pleased with the success of the movement in North Wales, and especially with the enthusiasm which these young quarrymen had displayed. In the course of his address he gave some striking examples of the work done by working men in these tutorial classes. It appears to be a part of the work of members of the classes to write essays on the subjects taught. Some of these essays were sent to Mr. A. L. Smith, of Balliol College, for examination. After examining them, Mr. Smith came to the conclusion that quite 25 per cent. of the essays were equal in quality to the work done by University students who secured Honours degrees. And very often it was found that the working men who did the best work were men who had been turned out of school at the age of ten, and who very often were casual labourers on the brink of unemployment. Principal Sir Harry Reichel, who presided, acknowledged the great debt the College and the cause of higher education in North Wales generally, owed to the quarrymen.

The Insurance Commissioners in conjunction with the Appointments Board of the University and the schools have recently held a conference to decide on a method of making appointments under the Insurance Act. No final decision was reached at the Conference, but the whole matter has been referred for further consideration to an Advisory Board. According to the original proposals, there will be two classes of appointments. For the A division the principals of the University Colleges will be requested to nominate graduates who have obtained First Class Honours in one subject, or Second Class Honours in two subjects. The final selection will be made by means of an examination conducted by the Civil Service Commissioners in London. In the B division, nominations will be made by the head masters of the intermediate schools, from candidates who have passed the Senior Certificate of the Central Welsh Board, under certain conditions. The Civil Service Commissioners will also examine these candidates. The Insurance Commissioners, in this scheme as they have tentatively put forward, have endeavoured to give effect to the desire which has been expressed already, that a separate

Civil Service staff should be found for Wales, and they have also recognized the essentially national character of the colleges and of the intermediate schools. It is, however, premature to discuss its details, as it is probable that some modifications will be introduced into it later on, in order that candidates who have not attended either the colleges or the intermediate schools may not be entirely debarred from competing for these posts. The Insurance Commissioners are, in any case, to be heartily congratulated on the courage and patriotic spirit which they have shown in dealing with the appointments under their control.

Principal Griffiths has recently published a document showing a return of grants made by Local Education Authorities to the Universities and University colleges. The Treasury have often insisted on local support as a condition precedent to State aid, so that it is important for the college to consider how far the amount of financial support at present given to it by the Education Authorities within its area is likely to influence any further demand that might be made to the Treasury on behalf of the college. Principal Griffiths stated that Cardiff College received less State aid than any other University college in the kingdom in proportion to the work done, and that the local support was also considerably below the average. The rate for higher education was above a halfpenny in all places where there was a University college, except in Wales. In many of the larger towns, like Liverpool and Birmingham, it was a penny. In Cardiff it was less than a farthing. He therefore strongly urged the Local Authorities to render greater assistance to the college, as the present means were not sufficient to do efficiently even what they had undertaken to do. The condition of their laboratories, for example, was almost a disgrace to the district.

After this strong and convincing appeal for financial help it will be a serious reflection on the Cardiff and Glamorgan Education Authorities if they do not immediately respond to it. In some parts of Wales there is a tendency to throw too great a share of the burden of maintaining our educational institutions on the Imperial Government and to neglect our duties in the matter locally.

The Governors of Abergele Intermediate School have protested against the action of the Colwyn Bay Higher Elementary School in advertising that it prepared pupils for outside examinations, and also for examinations for which pupils must be far above the age at which they should be allowed to remain in a higher elementary school—that is, the age of fifteen. It appears that there are about twenty such pupils. The County Council have directed that the school shall be carried on strictly as a higher elementary school, but the head master is anxious that these boys should not be required to leave the school at once, as they have been partly prepared for the examinations. This is only one more example of the difficulty of preventing overlapping between this type of school and a neighbouring secondary school.

Appointments.—Mr. Caleb Rees, M.A., Lecturer at the University College, Cardiff, has been appointed as an Assistant Inspector of Schools for Monmouthshire division. Mr. J. F. Rees, B.A., Assistant Lecturer in History at Bangor College, has been appointed Lecturer in Economic History in the Queen's University, Belfast.

The Cardiff Education Authority have established an Employment Exchange and Information Bureau to advise boys and girls, directly or through their parents, in the choice of employment. A special officer has been appointed who is expected to encourage boys and girls to continue their education after leaving school, and also to study the conditions of employment as they affect their interests. By this means, it is hoped to minimize the "blind alley" evil among the children of the city. Other large centres of population might usefully follow the good example set by Cardiff.

We have received the following letter from the Registrar of the University of Wales:—"I notice a paragraph in your February issue relating to the amended regulations for the election of head teachers of public schools as members of the Court of the University of Wales. The writer naturally expresses surprise that a clause allowing a voter to vote for as many candidates as there are members to be appointed should be a new regulation. The substance of this has, of course, always been in the instructions. The chief feature of the altered scheme is the provision for nomination of candidates before a poll is taken. Under the old regulations three thousand head teachers in elementary schools were invited to vote for any three out of the vast total, with the result that a very small percentage thought it worth while to vote at all. Now the votes can only be given to candidates who have been nominated by at least three voters. I need not go into details and I cannot hope that you can spare room even for this explanation, but perhaps you can assure your readers that the amendment of the scheme is not so meaningless or superfluous as might be supposed from the information that had reached you."

SCOTLAND.

The news of Lord Lister's death evoked deep regret in the Universities, especially in Glasgow and Edinburgh, with which he had a long official connexion. He came to Edinburgh with a London degree in 1853

Lord Lister. to work under Syme, and in 1860 he was appointed Regius Professor of Surgery at Glasgow, where he made his great discovery of the antiseptic treatment. In 1869 he returned to Edinburgh to succeed Syme in the Chair of Clinical Surgery, which he held until his appointment in 1877 to the Chair of Clinical Surgery at King's College, London. After the death of Lord Kelvin in 1907, he was offered the Chancellorship of Glasgow University; but his weak health prevented him from accepting it. In 1908 he received the Freedom of the City of Glasgow. In connexion with his funeral, Memorial Services were held at Glasgow University, and at St. Giles' Cathedral, Edinburgh, and all the Universities were represented at the Service in Westminster Abbey.

St. Andrews University Court has approved the following resolutions of the Conference of the Universities on the question of inclusive fees:—(1) that an inclusive fee be instituted in the Faculty of Law; (2) that

St. Andrews. no inclusive fee in the Faculty of Medicine be fixed until the University has had further experience of the working of the system of inclusive fees; (3) that the varying circumstances of the Universities with regard to the teaching given and the degrees conferred in applied science make a uniform inclusive fee in applied science impracticable at present. His Excellency J. Gennadius, LL.D., the Greek Ambassador in London, has presented to the University copies of the two famous Vafo Cups, as a token of his gratitude to and respect for the University. The Court has appointed Mr. R. Norrie, M.A., to be Lecturer in Mathematics, and Mr. W. S. Denham, B.Sc., to be Lecturer in Chemistry. The number of students attending the University for the Martinmas term, 1911, was 510 (297 men and 213 women).

As the result of the Scottish Exhibition at Glasgow last summer, the sum of £15,000 necessary for the endowment of a Chair of Scottish History at Glasgow University has been obtained, and there is a further surplus of profits which will probably amount to about £5,000. The Lord Rector, Mr. Birrell, visited Glasgow University on February 9, and was the guest of the Union at a house dinner. In an amusing speech he recalled a visit which he paid to the University at the age of ten, in the company of his father, who had studied there. The University Court had another long discussion on the question of inclusive fees and approved by a majority a reply to the proposals of the General Council that inclusive fees should be optional. As a concession to the view of the Council it was resolved "that any student, not being a beneficiary of the Carnegie Trust, who, on presenting himself for graduation, can show that the classes which he has actually taken would, if paid for severally on the scale of fees in force at the time, have amounted to a less sum than he has paid in inclusive fees shall be entitled to have the balance repaid to him by the University." The students whom the Council desires to safeguard would thus pay for their curriculum exactly the same amount as the Council desires that they should pay (*i.e.* two guineas less than the inclusive fee); but instead of paying for single classes they would pay the inclusive fee and have the two guineas returned at the end of their course. In spite of this, three of the representatives of the General Council voted for an amendment in favour of the Council's proposal. The Council's original proposal was absurd enough, and it is difficult to find an adjective to describe this action of some of their representatives.

The Glasgow Technical College has received an intimation from the Secretary for Scotland that the King has conferred on the College, the title of the Royal Technical College, Glasgow. The College is the largest of its kind in the Kingdom. It attracts students from all parts of the world, and its new buildings, which have been erected during the last ten years at a cost of £370,000, contain more than seven acres of floor space and are believed to be the largest of their kind in existence.

The Senate of Aberdeen University has resolved to confer the honorary degree of LL.D. on the Prime Minister, who was formerly Lord Rector of the University. **Aberdeen.** The Lord Rector, Mr. Andrew Carnegie, is to give his inaugural address about the middle of May. A memorial tablet to the late Principal Marshall Lang has been presented by his family and placed in the King's College Chapel, Aberdeen. Mr. A. G. Sutherland, M.A., Assistant to the Professor of Greek, has received an appointment in Africa, and Mr. Charles C. Calder, Assistant in Botany, has been appointed Curator of the Herbarium in the Botanical Gardens, Calcutta.

The Curators of Patronage at Edinburgh University have elected

Edinburgh.

Mr. Edmund Taylor Whittaker, M.A., F.R.S., Royal Astronomer of Ireland, to be Professor of Mathematics in succession to the late Professor Chrystal. There were six candidates. Professor Whittaker was educated at Manchester Grammar School and at Trinity College, Cambridge, where in 1895 he was second Wrangler and first Smith's prizeman. He was a Fellow of Trinity and University Lecturer in Mathematics. He is Vice-President of the Royal Irish Academy, and he has been Royal Astronomer of Ireland since 1906. The Lord Rector of Edinburgh University, the Earl of Minto, paid his first visit to the University on January 24. He met the Students' Representative Council, visited the Women Students' Union and dined with the University Conservative Club in the evening. Mr. A. P. Laurie, D.Sc., Principal of the Heriot-Watt College, Edinburgh, has been appointed Professor of Chemistry in the Royal Academy of Arts. Mr. James Munro, M.A., has been appointed Lecturer in Colonial and Indian History at Edinburgh University.

The new Provincial Committees have held their first meetings.

Provincial Committees.

The new Chairmen are:—St. Andrews, Principal Mackay; Glasgow, the Rev. John Smith, D.D.; Aberdeen, Mr. R. H. N. Sellar; Edinburgh, Professor Darroch. The Committees are already engaged in considering the new concurrent four years' course of University work and professional training, and it is probable that two alternative curricula will be arranged, in one of which the first two years will be devoted mainly to University Study and the second two to Professional training, while in the other this arrangement will be reversed. The Edinburgh Committee has prepared a scheme for the provision of joint hostels for students of the University, the Training College and other educational institutions, to be financed by the Education Department, the Carnegie Trustees and others. The Glasgow Committee has resolved to make provision for hostels for women students in training within the grounds of the new College to be built at Jordanhill.

There have been during the month many meetings of protest in connexion with the cost of the new scheme for

Superannuation.

the superannuation of teachers, but Mr. McKinnon Wood, the new Secretary for Scotland, has announced that a substantial Government grant will be made towards meeting the expenditure, and it is hoped that this will lead to a satisfactory solution of the difficulty.

On January 31 Lord Balfour of Burleigh opened the new school for girls erected on the south side of Glasgow by Hutcheson's Educational Trust. In an interesting address he pointed out the value of maintaining different types of schools and schools under various systems of management, providing the main idea was preserved of constructing an educational highway from the infant class to the ultimate entry on the business of life, along which highway all were to have the opportunity of travelling as far as their circumstances and their mental capacity might enable them to go. He defended the Education Department against some of the criticism directed against it, pointing out that what were sometimes characterized as "the demands of the Department" were often nothing more than an automatic result of legislation passed with general approval.

On February 1, Sir Henry Craik, M.P., addressed the Glasgow branch of the Secondary Education Association on "The Future of Secondary Education in Scotland." He criticized the demand for what was called practical or utilitarian education, and pointed out that "while there was a great deal of talk in favour of education in the abstract, there was very little respect or regard for the educated man in the body." In higher education they must, above all, insist on maintaining a lofty standard. No doubt the average boy must have a certain average curriculum laid down, but he was not prepared to regulate it more for the boys of moderate wants and capacities than for those of greater ability. He wanted it to be full of opportunities for the picked boys.

IRELAND.

A meeting of the Senate of Dublin University was held on February 21, in the Theatre of Trinity College, for the purpose of granting degrees. In the evening of the same day an interesting debate was held between the College Historical Society and the Edinburgh University Union on the burning topic of the day—Home Rule—the discussion being opened by Mr. J. P. Dickey, ex-President of the Edinburgh Union, on the Anti-Home-Rule side, followed by Mr. D. Coffey, ex-Auditor of the College Gaelic Society, in favour of the measure. Mr. Justice Ross presided, and after a keen debate, Home Rule was lost by 110 votes to 35.

The Universities. At a recent meeting of the governing body of University College, Cork, Sir Christopher Nixon, Vice-Chancellor of the National University, who attended, after congratulating Sir Bertram Windle on the high degree of efficiency and prosperity which he had found in

the college, said that there was a strong feeling amongst some of them, at any rate, that the constituent colleges were perfectly co-ordinate as regarded their functions with the University itself, and were practically Universities. There are not wanting signs that University College, Cork, will, in course of time, sever its connexion with the parent body and pursue its own independent career as the University of Munster: a change which would not only set free its work from various encumbrances arising from its connexion with the National University, but would also give it scope to develop on the lines most congenial to the spirit and traditions of the people of Munster—different in many respects from those of the other provinces.

The Lenten Pastorals have been issued by the Hierarchy during the past few days, and considerable interest has been aroused by that of Dr. O'Dwyer, Bishop of Limerick, which is devoted entirely to the evils likely to ensue from the co-education of the sexes in the Universities and from the Women's Suffrage Movement. Dr. O'Dwyer regards it as "an unpleasant commentary on the drift of things," that in Ireland, "where we boast so much of the virtue and modesty of our women," there are no special colleges for women, such as exist in the Universities of Oxford, Cambridge, and London (he makes no allusion to any other English Universities), but that Catholic girls are studying in the University colleges along with young men, "with no distinction between them in studies or even social conditions," and obliged "to rough it as best they can, away from their parents and all the protection of home." The same topic has for some months past occupied a prominent place in the *Irish Educational Review*, which is published at Limerick, and may be taken as fairly representative of the Bishop's opinions; the editorial comments of that journal animadverted with special severity on the action of the Irish Women Graduates' Association in opposing the recognition of women's colleges by the National University last year. Judging by the tenor of the Bishop's further remarks on Women's Suffrage and his main argument against it, that it is the function of the man to "speak, vote, and act" (surely by implication to think also?) for wife and child, one is inclined to ask whether Dr. O'Dwyer does not secretly believe that University education is altogether a superfluous luxury for women. Be that as it may, it seems likely that co-education, whether desirable or not, having once found its way into the Irish Universities, is going to stay—if it were only for the sake of the obvious economy of time and money which it secures. At present, in spite of the active opposition of the Bishops, there are 120 women students in University College, Dublin (to about 600 men) besides 55 in Cork and 22 at Galway, and in none of these colleges do any of the evils prognosticated by Dr. O'Dwyer appear likely to result, any more than they have resulted in Trinity College, where co-education has been on trial sufficiently long. The girl students in Dublin have their own reading rooms, &c., in a house in St. Stephen's Green, adjoining the college, and are under the charge of an efficient Lady Registrar, and so far the professors and all immediately concerned have declared themselves perfectly satisfied with the working of the system. Presumably the parents are satisfied also. As for those women students who are cut off from "the protection of home," hostels have been already opened for their accommodation in St. Stephen's Green by two of the religious orders. It is significant of the gradual change in opinion that University College Library and Historical Society, which hitherto excluded women even from attendance at its meetings, has this session opened its membership to them, and at its last meeting (when a paper was read by one of the women students) went so far as to invite a lady, a graduate of the late Royal University, to take the chair.

It is, perhaps, needless to say that in Belfast, where co-education has long been recognized and is adopted in some of the secondary schools, its successful working in Queen's University is a matter of course. The Senate of Queen's University, at its last meeting, on February 14, elected Sir John Newell Jordan, K.C.B., K.C.M.G., British Ambassador at Peking, as Pro-Chancellor of the University in the place of the late Sir Robert Hart. Mr. R. J. Frederick Rees, B.A., at present Lecturer on History in University College, North Wales, was appointed Lecturer on Economic History.

Mr. William Anderson Houston, M.A., has been appointed Assistant Commissioner of Intermediate Education in the room of Mr. Swift Paine Johnston, M.A., who has found it necessary to resign. Mr. Houston is a former student of Queen's College, Belfast, and a graduate of the Royal University, as well as of Cambridge, where he was fifth wrangler; he has been Professor of Mathematics at University College, Galway, since 1908.

The Chief Secretary held a conference on January 29, at Dublin Castle, with representatives of the Irish secondary schools, in order to discuss the best methods of improving the position of assistant teachers; the details have not been made public. Meantime the Association of Secondary Teachers is active, and a meeting was

held in Victoria College, Belfast, on February 17, in order to form a branch of women teachers in Ulster in connexion with it.

The subject of medical inspection of primary schools still receives attention, and at their meeting on February 5 the Dublin School Managers' Association (Church of Ireland) passed a resolution to the effect that such inspection was much needed and should be organized by the Public Health Authorities, since it was beyond the financial power of the managers to make provision for it.

Some of the problems connected with primary education in the poorer districts of the city were effectively set forth in a paper read at a recent meeting of the Dublin Educational Society by Mr. William O'Neill, Head Master of St. Andrew's School, Great Brunswick Street. Mr. O'Neill dealt especially with the matter of attendance, a question of importance to the city and the country at large, and one on which the public were wholly apathetic. In his district compulsory attendance was a mere farce. He suggested the establishment of a truancy school to deal with the evil; also that teachers should be elected on school-attendance committees, from which they are at present, from some inscrutable reason, excluded. At Mr. O'Neill's school something is done to feed the needy children, and even, in some cases, to clothe them; but he is opposed to the movement on foot at present to provide food out of the rates as being likely to pauperize the children and relieve their parents of their proper responsibilities.

The Classical Association of Ireland held its annual general meeting, in Dublin, on the afternoon of February 1, when the report was read and officers were elected. The Rev. H. Browne, S.J., M.A., Professor of Greek in University College, Dublin, was elected President for 1913. The report stated that last autumn a conference was held in the offices of the Intermediate Board between its Inspectors and the Council of the Association, on the teaching of classics in intermediate schools, as a result of which many of their suggestions had been adopted by the Intermediate Commissioners. In the evening a public meeting was held in the Theatre of the Royal Dublin Society, when Mr. Louis Claude Purser, Litt.D., F.T.C.D., President for 1912, delivered an exceedingly interesting address on "Lucian and his Age." Mr. R. C. Seaton, M.A., Hon. Treasurer of the (English) Classical Association, and Prof. W. A. Goligher, F.T.C.D., spoke on the paper, and the chair was occupied by Dr. Starkie, the retiring President.

The Central Association of Irish Schoolmistresses held its annual general meeting, in Alexandra College, on the evening of January 26, when the chair was taken by Miss White, I.L.D., the President, and a discussion on the Registration of Teachers was opened by Mr. John Thompson, M.A., who gave a clear account of the history of registration in England and the present movement in its relation to this country.

The Irish Association of Women Graduates held its annual general meeting (by kind permission) in the buildings of University College, St. Stephen's Green, on the evening of February 10, the President, Dr. Mulvany, being in the chair. A concise and interesting address was given by Miss M. Cunningham, M.A., of Trinity Hall, on the Insurance Act—chiefly in its relation to women's interests, whether as employers or employed.

One of the pioneers of the higher education in Ireland has passed away from us—Mrs. Margaret Byers, who died in Belfast on February 21. Ever since, in 1859, she founded the Victoria College in Belfast, Mrs. Byers was a foremost worker in the cause of women's education and one of those who strove successfully for the inclusion of girls in the benefits of the Irish Intermediate Act in 1878, and later, in 1881, of the Royal University. In recognition of her work she received the honorary degree of I.L.D. from Trinity College when it opened its doors to women; and on the foundation of the Queen's University she was appointed a member of the first Senate. Mrs. Byers's activity was by no means confined to educational matters, but covered a large field of interests, social and philanthropic, and she found time to publish many papers on educational and cognate subjects.

DATCHELOR TRAINING COLLEGE.

For the examinations held in December for the London Diploma of Pedagogy, six students were presented by this College. Of these Veronica Stonehouse, B.A. London (Classical Honours), passed with the mark of distinction in both parts of the examination; Muriel Guest, B.A., Muriel Thorne, B.A., Hilka Bright, B.A., Maud Gondio, B.A., and Evelyn Burton, B.Sc., all passed. One student, Gladys Parkin—took the examination for the Cambridge Teaching Diploma and passed in the Second Class.

SCHOOLS.

BIRKENHEAD, GIRLS' SECONDARY SCHOOL.—Miss Helen Gladstone was the principal speaker at the first public Speech Day of the

School, on February 14. The report showed that 13 pupils had been successful in the Northern Universities Matriculation Examination; 24 had passed the Senior Oxford Local; 7 full Honours Certificates, 125 Honours, 97 Passes, and 16 Distinctions, including a Silver Star, two Bronze Stars, and a Special Prize in Division VI had been obtained in the Royal Drawing Society's Examination and Exhibition; and 110 Certificates, 36 of them "Very Good," from the London Institute of Plain Needlework.

CLAPHAM HIGH SCHOOL.—The prize-giving was held at the School on February 16. Prebendary the Hon. J. S. Stafford Northcote, Chairman of the Council, presided; the prizes and certificates were distributed, in the absence, through illness, of Mr. Herbert Lewis, M.P., by Mrs. Herbert Lewis, herself a former pupil in the School. The record of successes for the year 1911-12 was read. Eleven former pupils had completed their degree course in the Universities. Three girls had been awarded open scholarships or exhibitions to women's colleges—M. Hennings, a scholarship for History of the value of £50 for three years at the Royal Holloway College; G. Parnell, an exhibition for History of the value of £30 for three years at Girton College; D. Daye, an exhibition for Chemistry, Botany, and Physics for the value of £30 for three years at Girton College. In the Cambridge Higher Local Examination M. Potter gained a Class I in Group A, English; Lilian Newman gained a Class I in Group B, with distinction in Latin. In the London University Matriculation eighteen girls were successful, three being placed in the First Division. In the Examination of the Oxford and Cambridge Joint Board, eight girls obtained Higher Certificates—M. Potter and D. Dalglish with distinction in English, E. Sauerbeck in German, M. Mitchell in Drawing. Eight girls also obtained "Letters." Eight girls passed the Oxford Senior Local Examination. The School gained the Sèvres Vase awarded by the Société Nationale des Professeurs de Français en Angleterre. The Vase is offered by the President of the French Republic to the girls' school of which the candidates taken as a whole have obtained the highest total of marks. *Training Department:* Eight post-graduate students obtained the Cambridge Teachers' Training Certificates with two first classes and three distinctions. National Froebel Union: in the examination for the Higher Certificate, Part II, two students were successful; for the Higher Certificate, Part I, sixteen were successful, two with distinction in Botany. Art Teachers: the Board of Education accepted thirty-seven sheets of students' work.

ETON COLLEGE.—Mr. E. L. Vaughan has given up Wotton House, but still retains his mastership. Mr. L. S. R. Byrne takes Wotton House, handing over his own to Mr. Rayner Wood. Mr. Philip Williams has left, and is succeeded as house-tutor by Mr. Robeson. Mr. Dyer also has left, and the two vacancies on the staff have been filled by Mr. H. K. Marsden and Mr. R. F. Mudie.

HARROW, THE COUNTY SCHOOL.—The School continues to increase rapidly—now numbers 201 boys and 10 masters. The Scout Troop has over 160 boys in it and is rapidly becoming proficient in certain elementary exercises. On January 27 Mr. E. T. Reed, of *Punch*, delivered a fascinating and humorous lecture on "Caricature in and out of Parliament." On February 5 Mr. William Archer spoke on "Rational Spelling." The weather was inclement and the audience consequently small, but the remarks of Mr. Archer and of Prof. Rippmann, who followed him, were listened to with the greatest interest and appreciation.

ROSSALL SCHOOL.—Entrance Scholarships are offered on an examination to be held here and in London on March 12 to 14. College scholarships and other distinctions outside the School:—H. V. Leonard, Classical Scholarship, Clare College; T. F. G. Taylor, First Classical Exhibition, Sidney Sussex College, Cambridge; T. C. Storey, Gibb Scholarship in Pathology, Durham University; O. J. Stone, First Class Honours B.Sc. Examination, London University. Mr. G. P. Peachell has come from the Prep. to replace Mr. C. H. Heel; his place has been taken by Mr. E. L. Sangar.

WINCHESTER COLLEGE.—The repairs to the Head Master's house and gardens still continue. R. C. Maples, G. T. Garratt, and R. Haygarth are taking the work of E. R. Wilson, H. E. G. Tyndale, and Rev. S. A. McDowall, all of whom are absent for the term.

YORK, THE MOUNT SCHOOL.—The new wing of the School buildings was opened on January 23 by the Vice-Chancellor of the Leeds University. The estimated cost of buildings and furniture is £6,500, and towards this £4,500 has already been received in subscriptions and £1,000 has been allotted by the Committee from the balance of the School Fund. In digging the foundations a fine inscribed tombstone of a Roman soldier of the Sixth Legion was discovered, and was on view in the hall. Under the mistress-ship of Miss Sturge, the Mount School has rapidly increased in numbers and outgrown the new wing added in 1902.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: The EARL OF MINTO, K.G., G.C.M.G., G.C.S.I., G.C.I.E., LL.D.

Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.

Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Winter Session** begins about the beginning of October and closes about the middle of March.

The **Summer Session**, except in Law, extends from about the middle of April to the end of June.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the Combination of Arts, Science, Medical or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering**, and in **Public Health** and the Degree of B.Sc. in **Agriculture and Forestry**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and in Hebrew, Arabic, and Syriac. The Degree of Bachelor of Divinity (B.D.) is conferred. The **Law Faculty**, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of the Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and a University **Certificate in Tropical Diseases** is also conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** also there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 66 Lecturers, and over 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,870. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the **DEANS OF THE FACULTIES**, or from the **CLERK OF SENATUS**; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 4d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.:—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

PRIZE COMPETITIONS.

The Translation Prize for February is awarded to "Erigena."

Winners of the Translation Prizes for January are: C. R. Haines, Esq. ("C. R. H."), 38 New Square, Cambridge; H. C. Prideaux, Esq. ("Passaro"), Ayshford School, Uffculme, Devon; H. Cradock Watson, Esq. ("Foursome"), Merchant Taylors School, Crosby, Liverpool; G. H. Clark, Esq. ("Amadan"), Clifton College, Bristol.

Rue Saint-Florentin, il y a un palais et un égout.

Le palais, qui est d'une noble riche et morn architecture, s'est appelé longtemps: *Hôtel de l'Infantado*; aujourd'hui on lit sur le fronton de sa porte principale: *Hôtel Talleyrand*. Pendant les quarante ans qu'il a habité cette rue, l'hôte dernier de ce palais n'a peut-être jamais laissé tomber son regard sur cet égout.

C'était un personnage étrange, redouté et considérable; il s'appelait Charles-Maurice de Périgord; il était noble comme Machiavel, prêtre comme Gondi, défrôqué comme Fouché, spirituel comme Voltaire et boiteux comme le diable. On pourrait dire que tout en lui boitait comme lui; la noblesse qu'il avait faite servante de la république, la prêtrise qu'il avait traînée au Champ de Mars, puis jetée au ruisseau, le mariage qu'il avait rompu par vingt scandales et par une séparation volontaire, l'esprit qu'il déshonorait par la bassesse.

Cet homme avait pourtant la grandeur; les splendeurs des deux régimes se confondaient en lui; il était prince de Vaux, royaume de France, et prince de l'empire français.

Pendant trente ans, du fond de son palais, du fond de sa pensée, il avait à peu près mené l'Europe. Il s'était laissé tutoyer par la révolution et lui avait souri, ironiquement, il est vrai; mais elle ne s'en était pas aperçue. Il avait approché, connu, observé, pénétré, remué, retourné, approfondi, raillé, fécondé tous les hommes de son temps, toutes les idées de son siècle, et il y avait eu dans sa vie des minutes où, tenant en sa main les quatre ou cinq fils formidables qui faisaient mouvoir l'univers civilisé, il avait pour pantin Napoléon I^{er}, empereur des Français, roi d'Italie, protec-

teur de la confédération du Rhin, médiateur de la confédération suisse. Voilà à quoi jouait cet homme.

By "ERIGENA."

In the Rue St. Florentin there is a palace—there is also a sewer. The palace, which is of a rich and noble, though austere, order of architecture, went long by the name of the "*Hôtel de l'Infantado*," but to-day you see on the pediment of the main gateway the words "*Hôtel Talleyrand*." During the forty years that the last occupant of the palace lived in the street, not once perhaps did he allow his eyes to light on that sewer.

His name was Charles Maurice de Périgord—a strange personage, a man to be reckoned with, and feared. Like Machiavelli he was a noble, and like Gondi a priest, though an unfrocked one, as Fouché also was. He had the wit and talent of Voltaire, and limped like the Devil himself. Indeed one may say that deformity—a taint of the Devil—was in the man's being throughout. His pride of birth had stooped to serve the man of the Revolution; he had trailed his priesthood in the dust of the Champ de Mars, then thrown it in the gutter. He had broken the sacred bonds of marriage by a score of infidelities ending in a separation from his wife by consent, and he constantly sullied his gifts of intellect by acts of trickery and meanness.

But for all that he had the quality of greatness, the splendours of two regimes meeting and mingling in his person. Prince de Vaux in the Kingdom of France, he became, under Napoleon, a Prince of the Empire.

In fact it may almost be said that from the interior of that palace, from the recesses of that subtle brain, had proceeded for thirty years the direction of the affairs of Europe. He had been "hail fellow well met" with the revolutionary leaders, who had failed to detect dissimulation in his smile. He had been in contact with all the men of his time, known them intimately and observed them closely, fathomed their inmost thoughts, taken their exact measure, worked upon their feelings, turned them round his finger, made them the objects of his banter. But he had also stimulated their minds, and stirred and shaped the leading ideas of his age. Nay more, there had been moments in his career when, with the main threads of international politics in his hand, to move the civilised world as he liked, he used as his puppet the great Napoleon himself,

(Continued on page 194.)

FROM GINN & COMPANY'S LIST

AN ILLUSTRATED SCHOOL GEOGRAPHY.

By A. J. HERBERTSON and A. E. FRYE.

An adaptation by Professor Herbertson of Frye's "Complete Geography" for use in English Schools. The book contains nearly 700 Illustrations and Diagrams, about 50 Outline and Relief Maps, and 16 pages of fully coloured Maps. Large 4to in size, 263 pages. Price 5s.

PHYSICAL GEOGRAPHY

By W. M. DAVIS. A scholarly, practical text-book, emphasizing man's physical environment as determinant of man's social and political modes of life. 428 pp. With Illustrations and Maps. Price 5s. 6d.

ELEMENTARY

PHYSICAL GEOGRAPHY

By W. M. DAVIS. Based on the author's "Physical Geography," with the addition of practical exercises and more space devoted to the atmosphere. 401 pp. Illustrated. Price 5s. 6d.

PRACTICAL EXERCISES IN PHYSICAL GEOGRAPHY WITH ATLAS.

By W. M. DAVIS. TEXT.—148 pp. Price 2s. ATLAS.—50 pp. Price 1s. 6d.

The object of this manual is to provide a series of systematic and disciplinary Exercises in Physical Geography, in order that the student may approach this subject through practical work in the laboratory as well as through lessons in a text.

First Year Latin.

By WILLIAM C. COLLAR and M. GRANT DANIELL.

This book provides an average class of beginners with all material necessary for the first year's work. Review questions and conversations interspersed, and "Essentials of Grammar" prefixed to every lesson. There are also copious selections for reading at the end of the book. The numerous illustrations add to the attractiveness of the book. 345 pp. Price 4s. 6d.

First Year German.

By WILLIAM C. COLLAR.

The aim of this book is to lay out in orderly progression, for beginners having not less than four lessons a week, one year's work in speaking, reading, and writing German. The facts and usage of the language are exhibited first in each lesson; then follow observations, rules, and practice. Selections in prose and poetry are freely interspersed, and at the end of the book are massed to the amount of forty pages. 336 pp. Price 4s. 6d.

STANFORD'S NEW OROGRAPHICAL MAPS

Compiled under the direction of
H. J. MACKINDER, M.A., M.P.,
Reader in Geography in the University of London.
"This excellent series."—*Geographical Journal*.

These Maps are primarily intended to depict the physical features of the Continents, but by the employment of the device of grey, almost transparent lettering, many names have been inserted without spoiling the graphic effect of the colouring. The contour lines have been drawn at the same intervals above and below the sea-level, with the result of rendering visible the true contrast between land elevations and ocean depths. The frontiers of countries have been marked by distinct, though subordinate, broken lines, and every town of a given minimum population has been indicated by a symbol.

HALLIDAY'S INCANDESCENT, Reflecting and Economical SCHOOL GAS LIGHTS

have recently been fitted at the Graiseley and at the Bingley Street large Public Schools, WOLVERHAMPTON.

After over two years' service and testing the following evidence of the continued efficiency of these strong and serviceable Gas Pendants has been received by the maker:—

Snow Hill, Wolverhampton, January 24, 1912.

Dear Sir,—I have much pleasure in stating that the Gas Lights I had from you have given great satisfaction. So much so, I have had them fitted in my own establishment with results most satisfactory.—Yours truly, GEO. E. BROWN.

M. Wamain, Thor, Dunnabie, Juggins, Ginger, Noxid, S.G., Mollie, P.R.J., G.A.P., Grimsdale, O.L., Marguerite d'Angoulême, X., Nedwos, The Gazeka, Kussie, Samon, Pollux, Esperanto.

Fourth Class.—A.B.C., Hot Stuff, Tweedledee, Gwynne,

Radium, Non dum, Salus, Up, Hermione, Go One, Laska, Yukon, Veritas, Polar, C.B.A., Finis, Tally, Nama, Iapxy, Perseverance, L.L.A., A.B.C., Punce, Q.E.D., Veritas, Sweet Pea, Leap Year, J.M.N., Erin, Nosco, Scamander, Moriendo vivo, M.L.R., L.O.G., Rufus, Nitram, Midget, Chadwick, Roscoe, Concierge, Drapier, Le Matelot, The Mugwump, I. Pen, Freak (Rutland), Lehte, Chapeauchamp, A.O.P., Tinker, D.L.W., Macdonald, F.E.C., Agatha Risso, Bessie.

Fifth Class.—Pearl, Madre, Pongo, L.E.H.T.E., D.L.D., H.L., Hatfelt, Castor, A.R., Poor Ould Joe, Some Fool, Fatty.

The passage from Victor Hugo was tolerably straightforward, but it required careful handling. Every sentence was an exercise in style; there were numerous small pitfalls, and one phrase fairly beat all the "eminent hands." What looks simpler than the first sentence, "In the Rue Saint-Florentin there is a palace and a kennel"? Yet there are half-a-dozen ways of going wrong. "The street of Saint F" sounds almost as strange as would "the street of Peace." In spite of grammar, "is," not "are"; a dash after "palace," if you will, but *égout* comes as an afterthought, a surprise. Translators who relied on dictionaries instead of brains gave all sorts of renderings for *égout*—projecting roof, eaves, house of ill-fame, drain-pipe. It needs but little thought to see that there is a Hugoesque antithesis (like Byron's "a palace or a prison"). The street is symbolic of the man. "A sewer" may pass, but I greatly prefer "a kennel," "an open gutter." There would be no point in suggesting that Talleyrand never noticed a closed sewer. Note, lastly, the order of the words—not "There is, &c., in the Rue Saint F." Enough, perhaps too much, of this minute criticism. I must deal more summarily with what remains. *D'une riche*: "an imposing but somewhat sombre building." *Fronton* in English is a dictionary word; read "above the main entrance." *Hôtel*: keep the French, with the accent. *Hôte*: "occupier" or "owner." *Considérable*: "a man of rank"; "notable," not "esteemed." "As unfrocked as F." is a *non-sens*. "As witty as Voltaire, with a limp like Mephisto." If we so translate we must continue: "In fact, we might say that the man's whole nature, moral as well as physical, limped"; but perhaps it is better to give up the play of words and render "was deformed"

(Continued on page 196.)

THE STANTON DESK

**THE MOST PERFECT
HYGIENIC DESK MADE**

It is supplied in Six different Patterns

each with the following advantages:—

The **DESK** slides so that a Perpendicular, a Plus, or a Minus Distance as regards the relative position of the desk and seat can be obtained.

GIRLS' SCHOOL TRANSFERS.

Messrs. GABBITAS, THRING & Co.,
36 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

TRANSFERS OF AND PARTNERSHIPS IN GIRLS' SCHOOLS.

Messrs. GABBITAS, THRING & Co. have
a large number of Girls' Schools on
the books of their Transfer Department,
but issue no list of such Schools. On
learning a Purchaser's qualifications
and requirements, they will send to her
notices of opportunities likely to suit her.

The following are a few of the Schools now
on their books:—

No. **TRANSFER** of or **PARTNERSHIP**
4,936. in old-established and successful Board-
ing and Day School with Boys' Preparatory Class
and Kindergarten, in a suburb of a North-Western
City, containing about 10 Boarders and 30 Day Pupils.
Prospectus fees 39 to 45 guineas and 12 to 15 guineas.
Gross income about £800, and profits about £300.
Goodwill £400. Premises would be let. Furniture
at a valuation.

No. **TRANSFER** of flourishing Preparatory
4,925. School for Girls and Boys, with Kinder-
garten, in a good residential suburb, containing about
80 Pupils, all at present under 13 years of age, at fees
of 6 to 9 guineas per annum. Gross receipts just
over £500.

No. **PARTNERSHIP** in Boarding and Day
4,896. School for Gentlemen's Daughters and
small Boys in a residential locality near London,
containing 3 Boarders and 50 Day Pupils. Fees 50 to

GIRLS' SCHOOL TRANSFERS.

80 guineas and 9 to 15 guineas. Gross receipts over
£1,000 and net profit £200. Goodwill of one-third
share £150, unless Partner can introduce Boarders.

No. **TRANSFER** of old-established, flourish-
4,890. ing School at a South Coast Health
Resort, containing about 50 Boarders, at prospectus
fees of 60 to 75 guineas, and most of them paying
quite full fees. Gross receipts for last year about
£3,000, being an increase on the average of last three
years. Fees for current year indicate further in-
crease. Goodwill £2,500.

No. **TRANSFER** of old-established Prepara-
4,887. tory School for Boys, under a lady,
situated at South Coast Health Resort. Principal
wishes to retire on account of advancing age. Wide
and long-established English and Anglo-Indian con-
nexion.

No. **PARTNERSHIP**, with a view to suc-
4,889. cession, in flourishing Boarding School
at a favourite South Coast Resort, full with over 30
Boarders. Day Pupils not received. Prospectus
fees of 90 guineas. Gross receipts about £4,600
last year. Average annual receipts of last three years
about £3,800. Net profits about £860 and £700
respectively. Goodwill of half share £1,000.

No. **TRANSFER** of or **PARTNERSHIP**
4,877. to succession, in excellent Boarding
and Day School for gentlemen's daughters, at a
residential locality close to a Scottish City. About
25 Boarders; prospectus fees 84 to 96 guineas; 10
Day Pupils and Day Boarders at prospectus fees of
6 to 33 guineas. Gross receipts over £2,000, and net
profits £700 or more. Terms dependent largely on
suitability of proposed partner or purchaser.

No. **TRANSFER** of Boarding and Day
4,868. School for Girls. Good residential and
service centre near London. 10 to 12 Boarders and
nearly 40 Day Pupils. Fees 33 to 39 guineas and 4 to
12 guineas. Average gross receipts over £1,200 for
last three years. Goodwill £250.

No. **TRANSFER** of Boarding House in
4,867. connexion with one of the Ladies' Col-
leges in Ireland, containing 12 or 14 Boarders, the
majority permanent residents. Owner giving up for
private reasons. Will transfer for £400 for Goodwill,
Furniture, and Fixtures. Gross income of £700 to
£800 could probably be secured.

GIRLS' SCHOOL TRANSFERS.

No. **TRANSFER** or **PARTNERSHIP**,
4,863. with a view to succession, of
first-rate School in a healthy residential locality near
London, containing from 30 to 40 Boarders. Pro-
spectus fees 90 to 120 guineas. Some Day Pupils.
Gross receipts averaging about £6,300 per annum.

No. **TRANSFER** or **PARTNERSHIP**
4,838. to succession. Flourishing Day
Connexion in good residential locality near London.
Nearly 40 Day Pupils and Day Boarders, the former
at prospectus fees of 15 to 24 guineas. Owner
removing with Boarders. School has grown rapidly,
and is still increasing.

No. **PARTNERSHIP**, with a view to Suc-
4,837. cession, in successful Finishing School
of the highest class on the Continent. Prospectus
fees 120 guineas. Gross receipts about £5,000, and
net profits about £1,000. Part of purchase money to
be paid down, remainder by instalments.

No. **TRANSFER** of Boarding and Day
4,821. School, with Kindergarten at a favourite
East Coast resort. 6 Boarders and 12 Day Pupils,
paying on the average £42 and £9 per annum, without
extras. Receipts about £350. Goodwill £100 or
capitation fees.

No. **TRANSFER** of very successful Boarding
4,818. School for the Daughters of Gentlemen,
at a healthy Educational Centre on the Continent.
School flourishing, practically full with about 30
Boarders, at fees of 90 to 180 guineas according to
requirements and whether entire charge is taken.
Gross receipts for last year about £3,000, an increase
on the average of the previous years. Expenses
calculated at £2,120. Goodwill two years' purchase.

No. **TRANSFER** of flourishing Day School
4,671. for Girls, with Preparatory Department
for Boys and Kindergarten, in a high living Suburb
of London, containing over 160 Day Pupils. Pro-
spectus fees from 4½ guineas in the Kindergarten to
12 guineas per annum. Gross receipts over £1,100, and
net profits over £300. Receipts and profits increasing.
Goodwill, £750, or two-thirds capitation fees.

Further information will be sent to
applicants, but Messrs. GABBITAS, THRING
& Co. will require **full particulars** before
arranging introductions to their clients. No
charge is made to Purchasers.

or "showed the cloven hoof." "Lame as the devil on two sticks" is not apposite, and "lame as a duck" is ridiculous. *Faite servante de* : "prostituted in the service of," or "degraded by wearing the livery of the Republic" (with a capital R). *Champ de Mars* refers to his celebration of Mass at the altar of the Fatherland, erected on the Champ de Mars, July 14, 1790. "The battlefield" and "trained" will account for some Fifth Classes; and *ruisseau* was frequently translated "stream." *Mariage rompu* : "broken off" and "one divorce" were common mistakes; read "his marriage vows which he had broken by a score of intrigues and a final separation by consent." *L'esprit* : "his genius which he degraded by the vile uses to which he put it," not "his wit which he spoilt by his vulgarity." Talleyrand was base, but never vulgar. *Cet homme* : "yet there was something great about the man; he combined in his own person the highest dignities of two forms of government—he was Prince de Vaux under the Monarchy and a Prince of the Empire." "In the kingdom of France" is ambiguous. *Du fond de son palais* is the crux to which I referred. It is hopeless to attempt anything like a literal rendering. I had thought of "by the dark policy which was hatched in the privacy of that dark palace," but I do not give this as an improvement on the prize version. "Hobnobbed with," "rubbed shoulders with" are alternatives to "been hail-fellow-well-met"; "let himself be 'thee'd' and 'thou'd'" is awkward. *Il avait approché* : "Erigena" gives the sense excellently, though we miss the epigrammatic crispness of the original. *Retourné* is "turned inside out," not "turned back" or "perverted." *Fécondé* is "impregnated," "leavened," not "turned to his own account." *Fils formidables* : "terrible," "terrific," &c., will not do; a few hit on the exact word "fateful." To mistake *fils* for the plural of *fils* relegated a few to the Fifth Class.

A Prize of Two Guineas is offered for the best translation of the following extract from Paul Bourget's critique of Guy de Maupassant :—

Il n'était pas besoin de cette profession de foi pour deviner chez lui la passion du mot pittoresque et de la phrase bien nombrée. Certains morceaux de facture sont à eux seuls un *credo* littéraire. Je choisis dans *Au Soleil* cette description, un lever de la lune au bord d'un lac de sel : "La pleine lune emplissait l'espace d'une clarté luisante qui semblait venir tout ce qu'elle froitait. Les montagnes, jaunes déjà sous le soleil, les sables jaunes, l'horizon jaune semblaient plus jaunes encore, caressés par la lueur safranée de l'astre. Là-bas, devant moi le Zar'z, le vaste lac de sel figé, semblait incandescent. On eût dit qu'une phosphorescence fantastique s'en dégageait, flottant au-dessus, une brume lumineuse de féerie, quelque chose de surnaturel, de si doux, de si captivant le regard et la pensée, que je restai plus d'une heure à regarder, ne pouvant me résoudre à fermer les yeux. Et partout, autour de moi, éclatant aussi sous la caresse de la lune, les burnous des Arabes endormis semblaient d'énormes flocons de neige tombés là." J'imagine qu'un professeur de rhétorique moderne, comme Sainte-Beuve s'est amusé à l'être dans quelques passages de son *Chateaubriand*, donnerait de cette page un bien curieux commentaire. Il montrerait la recherche d'harmonie imitative de ce "tombé là" qui termine sur une sonorité sourde cette phrase d'abord légère et vibrante comme un rayon de lune, l'alanguissement que donne à la période cette in correction volontaire : "de si captivant le regard et la pensée." Une foi entraîné par la doctrine qui veut que le style soit l'équivalent complet, le substitut intégral de la sensation, à quel scrupule de détail n'arrive-t-on pas ! Poussée à l'extrême, la logique du style d'images doit en effet aboutir à des recherches de cette ordre, de même que la logique du style d'idées conduisit Stendhal à écrire comme le code civil. On dirait que le langage humain, produit complexe de la sensation et de la réflexion, oscille entre ces deux pôles, de l'onomatopée à l'algèbre.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by March 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

MESSRS. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

HOME COUNTIES.—Large, old-established, and very successful **BOARDING AND DAY SCHOOL.** Principal retiring. 50 boarders, 100 day pupils. Gross receipts over £3,000. Profit £500. Fine premises with held for games. Capitalisation fee accepted on all pupils transferred. Personally inspected and strongly recommended. —T 1,158.

LONDON, N.—Old established **BOARDING AND DAY SCHOOL.** with Kindergarten. Principal retiring from the teaching profession. 51 boarders, 60 day pupils. Gross receipts over £1,000. Entire goodwill only £400. —T 1,157.

SUSSEX.—High-class **SCHOOL** for the Daughters of Gentlemen, which is always full, at a delightful seaside resort. Receipts about £3,500; average net profit last three years nearly £900. Entire goodwill, to include most of the furniture, £2,400, or a partnership could be arranged. —T 1,146.

KENT.—First-class **BOARDING SCHOOL** for the Daughters of Gentlemen, at a favourite seaside resort; 36 boarders; fine premises. Receipts over £4,000. Capitalisation fee accepted on pupils transferred. Partnership would be considered for twelve months in order to give thorough introduction. —T 1,148.

CHESHIRE.—High class **BOARDING AND DAY SCHOOL.** 8 boarders, 25 day pupils. Large detached house specially adapted for school purposes standing in an acre of ground; field adjoining for games. Receipts £1,545, profit £150. Any reasonable offer accepted to enable Principal to retire at an early date. School has splendid reputation. —T 799.

SCOTLAND.—The Principal of a high-class **BOARDING SCHOOL** would receive an experienced and well qualified lady into **PARTNERSHIP** with a view to succession. The school yields a net profit of about £700 per annum. If desired, the Principal would remain a sleeping partner, leaving entire charge and control of the school in the hands of the incoming partner. —T 1,132.

LANCASHIRE COAST.—Transfer of or Partnership in good **BOARDING AND DAY SCHOOL.** 14 boarders, 6 day pupils. Receipts £550, net profit £100. Half share £250; entire school £400. —T 1,128.

SURREY.—**BOARDING AND DAY SCHOOL FOR GIRLS,** with preparatory department for little boys. 3 boarders, fees £30 to £80 per annum; 39 day pupils, fees £6 to £12 per annum. Receipts £630, rent £75. Capitalisation fee accepted for goodwill. —T 1,066.

YORKSHIRE.—**BOARDING AND DAY SCHOOL.** 48 pupils, receipts £1,150. Splendid premises, including gymnasium; garden of one acre. Entire goodwill, £500, or near offer. —T 242.

DEVON.—**BOARDING AND DAY SCHOOL.** Principal retiring. School established for past 24 years. 12 Boarders. 38 Day Pupils. Receipts £740, profit £140. Capitalisation fee accepted. —T 1,082.

KENT.—**BOARDING AND DAY SCHOOL.** 41 pupils. Receipts £445. Rent of premises £80. Entire goodwill, including school furniture and schoolroom, which is vendor's own property, only £200. Rapidly growing neighbourhood; school could be developed in a short time. —T 1,092.

NO CHARGE TO PURCHASERS.

SWITZERLAND.—High-class **BOARDING SCHOOL** for the Daughters of Gentlemen in a favourite educational centre. 28 boarders; average fees £90 per annum, exclusive of extras. Specially built premises, with magnificent views of the lake and mountains. Accommodation for 30 boarders. Receipts £3,000; profit £700. Personally inspected and warmly recommended. —T 1,118.

LANCASHIRE COAST.—Good class **BOARDING AND DAY SCHOOL,** old-established. 25 boarders, fees £50 per annum; 30 day pupils, fees £15 per annum, exclusive of extras. Specially built premises. Receipts £2,300, net profit over £600. Genuine opening. —T 1,130.

LONDON, N.—Large and flourishing **PRIVATE DAY SCHOOL,** with Kindergarten. 165 pupils. Fees 4s to 12 guineas per annum, exclusive of extras. Specially built school premises, including large assembly hall and gymnasium. Receipts £1,166, profit £500. Entire goodwill, £700. —T 1,168.

SUSSEX.—**PARTNERSHIP** is offered in a nice-class Girls' School at a seaside watering place. There are 16 boarders and 8 day pupils. The school has a good French and German connexion. Receipts £952; profit £250. Half share of goodwill £250. —T 1,150.

NORTHUMBERLAND. **PARTNERSHIP** offered in a good-class and flourishing School, now conducted by two ladies. A partner would be received with a view to succession. Receipts £1,268; profit £415. The opening would be suitable to a lady able to introduce a few boarders. —T 1,179.

Full particulars of the above and others may be obtained on application. Intending purchasers are invited to write stating their requirements. Address—158 to 162 OXFORD STREET, LONDON, W.

NOTICE IS HEREBY GIVEN, that on WEDNESDAY, 15th of MAY next, the Senate will proceed to elect Examiners in the following departments for the year 1912-13.

FOR THE MATRICULATION EXAMINATION.

The Examiners appointed will be called upon to take part in the three Matriculation Examinations of the year. The remuneration of each Examinership consists of an inclusive annual Salary varying according to the subject. Full particulars can be obtained on application to the Principal.

FACULTY OF ARTS AND OF SCIENCE.

One in *Latin*. One in *Mathematics (Elementary and More Advanced)*.
One in *Greek*. One in *Physical and General Geography*.
One in *English*. One in *Elementary Physics*.
One in *Modern History*. One in *Elementary Chemistry*.
One in *French*. One in *Elementary Chemistry*.
One in *German*. One in *Elementary Chemistry*.

In each of these subjects there are two Examiners, but in each case one of the present Examiners is eligible and offers himself for re-election.

One in *Geometrical and Mechanical Drawing*.

In this subject there is one Examiner, and the retiring Examiner is not re-eligible.

Candidates must send in their names to the Principal, with any attestation of their qualifications they may think desirable, on or before MONDAY, FEBRUARY 19th. (It is particularly desired by the Senate that no application of any kind be made to its individual Members.)

The Senate is also prepared to receive applications for inclusion in the Panel of Assistant Examiners for the Matriculation Examination, in Classics, English, French, Mathematics, History, Physics, Chemistry, Botany, and Geography respectively.

Assistant Examiners will be employed as and when required to read the scripts of candidates, and the remuneration will be at the rate of £5 per 100 scripts in all subjects except Arithmetic and Algebra, for which subject the remuneration will be £4 per 100 scripts.

If testimonials are submitted, three copies of each should be sent. Original testimonials should not be forwarded in any case. If more than one Examinership or Assistant Examinership is applied for, a separate complete application, with copies of testimonials, if any, must be forwarded in respect of each.

By Order of the Senate

HENRY A. MIERS, *Principal*.

The Vitality of Platonism and other Essays By JAMES ADAM, Litt.D., late Fellow and Senior Tutor of Emmanuel College, Cambridge. Edited by his wife ADELA MARION ADAM.

Demy 8vo
7s 6d net

This volume contains the late Dr. James Adam's essays on The Vitality of Platonism, The Divine Origin of the Soul, The Doctrine of the Logos in Heraclitus, The Hymn of Cleanthes, Ancient Greek Views of Suffering and Evil, and The Moral and Intellectual Value of Classical Education. They were read by him as papers or lectures on various occasions.

The Philosophical Works of Descartes

Rendered into English by ELIZABETH S. HALDANE, LL.D., and G. R. T. ROSS, M.A., D.Phil. In two volumes.

Vol. I
Demy 8vo
10s 6d net

"As to the translation itself, it is a model of what a rendering from one language into another ought to be. It is not a mere translation of one language into another, it is a rendering of the thought and meaning of the author into the language which reads as if it were the work of the author himself. Descartes is made to speak our English tongue, as if he had written his argument in it. Not only is it a true rendering of the meaning of the author, it is rendered into perfect English, in which there is allowed to remain no trace of a foreign idiom."—*Aberdeen Free Press*

A New Law of Thought and its Logical Bearings By E. E. CONSTANCE JONES, Mistress of Girton College. With a preface by Professor STOUT. Girton College Studies, No. 4.

Crown 8vo
2s net

"The service which Miss Jones has rendered to Logic in this little volume lies not so much in the mere enunciation of the 'Law of Significant Assertion' as in her thorough and systematic application of it. . . . Miss Jones seems to have made out a good case for regarding the Law of Significant Assertion as a fundamental Law of Thought."—*Extract from Professor Stout's Preface*

History of Scotland to the Present Time Illustrated library edition. Revised and brought up to the year 1910. With 11 maps and 132 plates. In three volumes. By P. HUME BROWN, M.A., LL.D., F.B.A., Historiographer Royal for Scotland, and Fraser Professor of Ancient (Scottish) History in the University of Edinburgh.

Royal 8vo
30s net

So far as the narrative is concerned this edition of Professor Hume Brown's History of Scotland differs from the original one mainly in bringing it down to the present time, although in all three volumes changes have been introduced where later investigations rendered them necessary. Vol. I covers the period from the beginnings to the accession of Mary Stuart; Vol. II carries the History on to the Revolution of 1689; and Vol. III brings it down to the year 1910. The volumes may be purchased separately at 10s 6d net each. The maps and illustrations form a special feature of the new edition.

Sir Philip Sidney: Complete Works

Edited by ALBERT FEUILLERAT, Professor of English Literature in the University of Rennes. In three volumes. Cambridge English Classics Series.

Crown 8vo
4s 6d net
per vol.

The object of the volumes now offered to Elizabethan students is to collect all the literary productions of Sidney—*The Countess of Pembroke's Arcadia*, the *Poems*, and *The Defence of Poesie*, as well as the *Correspondence* and the *Political Pamphlets*—of which no complete edition has hitherto been accessible. The first volume, which is now ready, contains *The Countess of Pembroke's Arcadia*, the text given being that of the first edition, published in 1590. A facsimile of the title page is included.

An English-Greek Lexicon By G. M. EDWARDS, M.A., Fellow of Sidney Sussex College, Cambridge.

Fcap. 4to
7s 6d net

Some sections in the introduction have been written for scholars who are interested in the investigation of the dialect of Tragedy and of "Attic" pure and undehled. One aim of the lexicon is to teach other students to distinguish roughly between the kind of Greek words suitable for Prose and those suitable for Iambic Verse. The former are distinguished by the letter P and the latter by the letter V, and the absence of these letters signifies that the word is suitable both for Prose and Verse. A list of proper names is included as well as five appendices on the use of certain Greek words.

A First German Book, on the Direct Method By G. T. UNGOED, M.A., late Exhibitioner of Trinity College, Cambridge, Assistant Master at Acton County School.

Crown 8vo
2s 6d

This book is an attempt to provide an easy course of instruction for pupils who begin the study of German at an early age. It contains a series of graduated lessons with questions and exercises, phonetic transcriptions of the first eleven lessons, and a brief summary of grammar. A vocabulary giving the simple English equivalents and the pronunciation of each word in phonetic spelling is also supplied for those who desire it.

A prospectus, with specimen pages, will be sent on application.

A Shorter Geometry By C. GODFREY, M.V.O., M.A., and A. W. SIDONS, M.A.

Crown 8vo
2s 6d

"A well-arranged and clearly expounded school text-book which covers the three stages distinguished in a recent recommendation of the Board of Education. It is, in short, a valuable development and continuation of the excellent 'Geometry for Beginners' written by the same authors."—*Scotsman*

THE TEACHING OF ENGLISH : VERSE COMPOSITION.

MOST sane people and all enthusiasts will agree that the main thing in the teaching of English literature is the poem itself—that explanations may easily be overdone, if indeed they are actually blasphemous, and that the best explanation is to read the poem over again. The process should be one of soaking, and, to change the metaphor, the teacher's business is to hook the pupil on to the poet and leave him there—attracted, fixed. Poetry for poetry's sake, and for the sake of "the noble nature" which develops when there is a sense of something far more deeply interfused, and beauty born of murmuring sound passes into the soul.

In this article, however, I wish to take one of the subordinate points in literature teaching, that of rime or verse construction; and, by a brief account of lessons given and work done by classes, to show how useful such training may be.

A course of eight lessons on Chaucer's "Prologue" had been taken with a class of pupil-teachers working for Preliminary Certificate—this as part of the wide syllabus issued by the authorities. The girls had read the text, paying only the very slightest attention to final *e*'s, and after eight lessons were firmly assured of Chaucer's being a delightful racy person. When told to write a description of the Prioress's Nun—to continue the lines,

Another Nonnè with hire haddè she
That was hire Chapelyne

—they were rather alarmed, but, among the class of sixteen, fourteen produced creditable lines. I give one description in full, and extracts from others:—

Another Nonne was with the Prioress
Who was her chapelyne, as wel I gesse,
And for hir oft hir book and cross did bear.
Ful daintily she rode as I was war
Upon hir palfrey that was white as snow.
Hir voice was ever gentil, soft and low,
And oft and swetely smilèd she withalle.
(Of hir stature she ne was nat talle,
Hir eyen weren brown, and bright did shine,
And eek her robès weren verray fine.
And al be lokèd she a fetis lady
This ilke Nonnè was a mekè mayde.

She rode o'er
The londe, to seke the holy martir's grave,
That she mighte for al time hir soule save.

Another exercise was set to girls working for the Cambridge Higher Local Literature Group. They had been studying the sections on drama in the usual history of literature text-books, and had been interested in reading "Everyman." They were requested to write a morality play.

MAN (*crying out*). Help me, Repentance, prithece give me aid.
For Evil Deeds doth make me stumble sore,
And I have little time in which to reach
The Golden Gates: I pray you come to me.
REPENTANCE. Give me your hand, we will together fight
That Evil Deeds may loose his clinging hold.
MAN. I feel it slacken: looser still it grows.
REPENTANCE. Keep close to me, and he shall leave thee quite.
MAN. 'Tis slacker yet: I hardly feel his grip.
REPENTANCE. Loose not your hold on me, and he will die.
I will not fail thee, only keep near me,
And Evil Deeds can have no power o'er thee.

An experiment was made with a fifth form in sonnet writing. The Italian form had been explained and some of Milton's sonnets read, and the class were given three-quarters of an hour and told to write sonnets then and there on any subject they liked. It was not an easy task, but a girl of fifteen produced this:—

THE SEA.

Full often have I wandered by the shore
And watched the ocean, both in calm and storm,

And seen the waves with ever-changing form
Upon the sandy beaches break and roar,
As in a cloud of flying spray they pour
Their waters on the land. And I have seen
The sea in summer, lying calm and green
And bright, looking as if it never more
Could rage, while o'er it slowly sail the ships
And when the night falls, flashing lights appear
On rocks or headlands, that the sailors guide,
And the moon rises, and her bright ray slips
Across the flood, making a pathway clear;
And silently creeps in the flowing tide.

One more instance. Two lessons were given to a third form on Ben Jonson's lyric, "The Noble Nature." The class did not know the poem, neither were they at first asked to read it; they were only told that they were going to make verse about a hard subject—Life. A short discussion followed, in which the children, with very little guiding by the teacher, came to certain conclusions and recorded them in simple class-composed sentences on the blackboard. "Though trees are the biggest plants, they are not the most beautiful. The oak tree is the oldest of plants, but it is not the most beautiful. Lilies are the most beautiful of plants, though they soon die. So people who die young may have had beautiful lives." The next and chief business was to take each of the four statements and express it in two rimed lines. After a few minutes of really hard thought, several of the children had produced passable couplets, and a vote of the class pronounced the best to be:

The largest plant that grows is a tree
Though much more lovely flowers may be.

So the work proceeded—four minutes' composition, and then a few minutes of comparing results and discriminating selection of the best. The children realized that balance was necessary, and regretfully rejected the couplet:

The berries are red on the old yew-tree,
But pure, pure white the lily be.

though they, as well as the teacher, recognized its babyish charm. The final result was:

The largest plant that grows is a tree,
Though much more lovely flowers may be.
The old, old oak does never die,
Though very fast the time does fly.
The lily is pure and white as snow,
And blooms when the summer breezes blow.
And so with Life we may think the same,
Though short, it is often filled with Fame.

Afterwards Ben Jonson's poem was read several times and discussed. The children picked out words used by him that they liked; they thought that it was nice to have two short lines—

A lily of a day
Is fairer far in May

—among the long ones; they saw that rimes could be got by altering the order of the words; and they decided that Ben Jonson's poem, though harder to understand, was prettier than theirs.

It is generally taken for granted that the teaching of English composition is the teaching to write prose. But, especially with young children, it is good to teach verse making. Poetry has always come before prose in the history of the race. Most children do write "poetry" naturally, but they are shy and do not often show their effusions, so that there is no such scope for the critical faculty as is afforded where a class makes verses and discusses them. It is not possible to make every child keen to write passable prose, but it is easy to make every child keen to write passable verse; and, an interest in verse composition once aroused, the teaching of prose composition is simplified. The development of the critical faculty resulting from these stumbling efforts to compose poems on their own account will also lead to the children's having a truer appreciation of the work of great poets. A double purpose is therefore served, and the time given to verse composition is not wasted.

J. A. JOHNSTON.

FEEDING AND BREEDING.

THE wise words of Sir James Crichton-Browne, delivered in his presidential address to the Annual Conference of L.C.C. teachers at Birkbeck College, deserve to be laid to heart by all teachers and parents. Sir James reminded his audience that for thirty years he had been preaching that feeding comes before education, and that the backwardness of certain children, the failure in brain power, or the failure to maintain the early promise of high ability, and a great deal of brain disease owe their cause to malnutrition. In his own inimitable way the chairman showed that improved cookery has more than a tendency to work out finally in better brains. Capable Frenchmen, amongst them ex-President Loubet, have been heard to declare that the destinies of France are involved in the supremacy of her cooks.

Speaking generally, it may be said of the feeding of our school children of all classes that it does not offer sufficient variety; that the dishes are not planned and combined scientifically; worst of all, children are very rarely taught to eat properly, to masticate sufficiently, and, above all things, to avoid washing down with fluid food that is insufficiently masticated. The growing custom of using foods that have been prepared and packed in tins, packets, and bottles is also one that is to be deprecated. Such foods are relatively expensive. Wheat that costs 1½d. per pound is often prepared and packed, after which the charge made for it is from 5d. to 8d. per pound. Cheap food stuffs, it may be claimed, when well and appetizingly prepared, are far more beneficial to the consumer and to the provider than expensive patented foods.

VARIETY.

With regard to variety, it may be said in general that all households, private houses, hotels, or hostels, tend to run in grooves. This would not in itself be hurtful, only that in England the grooves are largely faulty, unscientific. Take, for instance, the question of cold meat, a dish that the Continental nations manage to dispense with, especially in cold weather. Cold meat throws the eater on chutney, pickles, patent and piquant sauces; at best, beetroot soaked in vinegar. A correct diet eliminates condiments, and requires a restricted use of salt and sugar. All dietists acknowledge that biting condiments destroy and jade the palate; he who is addicted to them comes to enjoy simple foods and flavours less: demands stimulation, whetting. Any one who has tried a diet with condiments, and has afterwards abandoned them, will find an unexpected savour returning to simple foods such as bread, butter, milk. Condiments render the blood "acid" (non-alkaline), and are peculiarly apt to cause intestinal catarrh, the parent of a host of disorders, and notably of excessive thinness. It is now established that colds, coughs, and almost all bronchial affections are due to digestive troubles; the lungs are attacked only *after* the digestion has been affected.

Excellent soups can be made from combinations of lentils, haricots, rice, tapioca, barley, and all sorts of vegetables, such as onions, artichokes, carrots, celery; such soups can be made without meat or stock. Perhaps in the majority of our schools and college hostels one never sees a well made, appetizing vegetable soup. If we ask why, the reason would seem to be that cooks do not think of extending menus and Heads are busy with other matters.

There seems little doubt that as civilization advances increasing difficulty is found in the digestion of starch. For this reason it is a mistake to make half an English dinner consist of the pudding course, in which starch usually plays a very large part—a part whose utility is not increased by the extensive use of sugar, syrup, jam, and so forth. Even in winter an abundance of wholesome dried fruits, such as apples, pears, apricots, raisins, peaches, can be obtained. It is true these are now suffering from the general rise in prices; but they suffered from relative neglect even when cheap. One would imagine that prunes were only for invalids and semi-

invalids in England, instead of being an admirable dish for every one when not cooked with sugar.

At schools the breakfast might easily offer more choice by a variety of porridges, such as oatmeal, wholemeal (wheat), rice, paunade (savoury bread porridge much used in France). But it should be remembered that the great drawback to porridge is that it requires no mastication, and therefore fails to stimulate the saliva, and, by reflex action, the gastric juice. This is the real reason why porridge, soup, and all "pappy" foods do not agree with a considerable number of people. Where porridge has appeared at a meal, it should *always* be followed by hard biscuits, crisp toast, crusts, and *zwieback* in general. All these should be made of finely ground wholemeal. The miserable hair, decayed teeth, narrow jaws, and dome-shaped palate of the rising generation are very largely due to white bread, insufficiently baked and improperly masticated. Bacon is so largely cured with saltpetre and other biting and corroding preservatives that it scarcely deserves the important place assigned to it in the English breakfast. Eggs, when fresh, are an admirable food, but to retain their best and most nutritive qualities should never be boiled or fried.

The meals that most require reformation in our dietary are tea and supper. These should be thrown into one and consist largely of fish, cereals cooked with cheese, pulse cooked with vegetables, salads, and so forth. No people requires four meals a day: it is a waste of time, a cause of additional trouble, a refusal of the necessary rest to the organs of digestion. Children who need to eat more frequently than adults may be satisfied with apples, bananas, &c., at 4 p.m. Fruit is best eaten alone. Or they may have a glass of milk. Out of milk admirable bodies, strong and handsome, can be built. No tea should be served with a meal, either at breakfast or high tea. However good the tea is and however well prepared, it should not be served as a component part of any meal. The serving of tea, in order to "wash down" solid food is the prime, the gigantic error in our British dietary. To reform physique, this mistake needs to be understood and swept out.

The scientific combining of a meal is a difficult subject and one that requires a great deal of study. Research is not yet complete. There must be a sufficiency of proteid in each meal, that is, of the elementary substance found in meat, fish, poultry, eggs, cheese, milk, &c.; a sufficiency of starch, the substance in bread, cereals, tapioca, and in many vegetables such as potatoes, artichokes, carrots, and so forth. Food reformers are now laying great stress on the maleficence of wrong mixtures of food. It is practically certain that the eating of green vegetables and fruit at the same meal is a mistake and often the cause of serious digestive disturbances. Nor do fruit and starch agree well together; such a mistake as a shape of blancmange together with sour rhubarb highly sweetened is the precise reverse of a proper combination.

Here a word needs to be said about the serious and reprehensible waste of excellent vegetables in England. With the exception of cabbage and greens, whose "strong" odour is most probably due to unsuitable manuring, vegetables should always be baked, stewed, or steamed. As a rule in England, the most valuable part of the vegetables, the mineral salts, are thrown down the sink, instead of building up bodies and to a large extent correcting the "acid" tendency of the blood. No school should engage a cook who does not thoroughly understand the importance of the vegetable salts in the animal economy. The loss of these valuable substances, of first-class importance to the bones, nails, hair, teeth, is the second colossal error in the English dietary.

The third great mistake is that children are not usually taught to eat properly; when they are, their parents, pastors, and masters are often styled faddists and cranks. It may be safely said that no child will masticate properly if fluid is placed by his side when eating. He will have more than an inclination to bolt his food, and mitigate the unpleasant sensation in the œsophagus by means of the fluid. Do not tempt him, therefore. Place the fluid on the sideboard, so that he is spared an unnecessary and undesirable suggestion. Mr.

Horace Fletcher, the American dietist, has improved the digestion of thousands of people by his great dictum: "Eat less and eat it more." To teach the right way of eating is not making a child a faddist on the subject; it is simply giving him a right habit instead of a wrong one. When we eat, Nature has five digestive juices ready to pour on the food, one after the other, to extract the utmost good out of it: to build all the material into the structure. But, unless we begin by efficient mastication, pouring a flow of saliva on what we are eating, the juices will not come out to do their work; their place is usurped by the fluid we foolishly swallow at meal times. How wonderful it is that each of the digestive fluids is picked or secreted out of the blood when wanted in order to make more blood. And even more wonderful is our stupidity in not knowing the facts and acting upon them. It needs to be remembered that, as civilization advances, instinct serves us less well, and we need to rely more and more on intelligence.

DIRECTORY OF EDUCATIONAL ASSOCIATIONS.

[This List is Copyright. Reproduction is forbidden.]

THE object is stated only when this is not obvious from the title or not known by general repute. The following number gives the membership as far as ascertainable. Then follow the yearly subscriptions, the name of the Secretary, and office address. We owe our best thanks to Secretaries for their promptitude in correcting slips. No reply came to hand from the Societies marked *.

Aberdeen County Schoolmasters' Association.

80. 1s. To promote interests of secondary education in rural districts. Mr. George Murray, M.A., F.E.I.S., Dyce, N.B.

Academy, The British.

For the promotion of Historical, Philosophical, and Philological Studies. Maximum number of Fellows, 100. Prof. I. Gollancz, The British Academy, Burlington House, London, W.

Adult School Association.*

Society of Friends, Bishopsgate Street Within, E.C.

Agenda Club, The.

An association of men and women undertaking or anxious to promote voluntary service for the benefit of the community, and to inspire others with a similar spirit. 28 Fleet Street, E.C.

Agriculture and Technical Instruction [Ireland], Department of.

Mr. T. P. Gill, 4 Upper Merrion Street, Dublin.

Agriculture, Scottish Teachers of, Incorporated Institute of.

2s. 6d. Mr. J. Wilson Sinton, F.E.I.S., Dalmeny, N.B.

Allgemeiner Deutscher Sprachverein.

A literary association to promote the study of pure German. 28, 130. Zweigverein, London. 62s. 5s. Hon. Secretary, Mr. Max Sylge, 26 Sun Street, London, E.C.

Alliance Française pour la propagation de la langue française.

186 Boulevard Saint Germain, Paris. Federation of the British Branches, President Prof. A. V. Salmon, 54 Western Elms Avenue, Reading. Hon. Secretary, Mr. F. Novion, 32 High Street, Croydon. 125 societies affiliated. Subscription 6s. to 10s.

Animals, Royal Society for Prevention of Cruelty to.

Mr. E. G. Fairholme, 105 Jermyn Street, S.W.

Anthropological Institute, Royal.

500. £2. 2s. Mr. T. A. Joyce, M.A., 50 Great Russell Street, W.C.

Army School Appointments.

Address A.A.G., Army Schools, War Office, Whitehall, S.W.

Art for Schools Association

700. Subscription £1. 1s. or 10s. 6d. Miss M. L. Cooper, The Settlement, Tavistock Place, London, W.C.

Art Masters, The National Society of.

30. £1. 1s. Mr. Francis C. Ford, M.A., 13 Warwick Road, Earl's Court, S.W.

Arts, Royal Society of.

£2. 2s. Sir H. Trueman Wood, 18 John Street, Adelphi, W.C.

Art Teachers' Guild.

250. For those interested in the teaching of art in schools.

5s. Miss Ethel M. Spiller, 11 Highbury Crescent, London, N.

Assistant Masters, Incorporated Association of.

Masters in Secondary Schools, both public and private. 3,700.

10s. 6d. Mr. J. G. Lamb, M.A., 35 John Street, Bedford Row, W.C.

Yorkshire Loan Training Fund.

To assist poor gentlewomen to train themselves to earn their own living by lending them money without interest. Hon. Sec., Mrs. B. P. Scattergood, Moorside, Far Headingley, Leeds.

CORRESPONDENCE.

LATIN v. ENGLISH.

To the Editor of The Journal of Education.

SIR,—In the current *Journal of Education*, page 106, you allude to my remarks on English as she wrote, which appeared in the *Morning Post*; and you add that I have not answered my answerer. I left him unanswered, because I thought that any one who really wanted to form an opinion would have looked at my paper to see whether it did not contain the answer. But as you make me "vilipend the moderns" on the strength of one newspaper headline, I suppose that either I did not make my meaning clear, or that readers do not look to see if an answerer really answers. When you go on to ask whether I find Virgil as easy to understand as Tennyson, it is clear that there is something wrong.

What I meant to say was this. The daily papers, the magazines, and the novels are all that the modern boy, girl, man, or woman reads of his or her own accord; or at least, they so much outweigh the best books in his world that we may leave the best books out of account. So, also, I leave the best Latin and Greek books out of account. But in his Latin or Greek lesson he is practised every day in the art of saying exactly what he means. I speak now of the expressions of thought that he makes or hears in his daily lessons; whilst in his daily reading of the aforesaid documents he meets with phrases that may imply two or more things, though they mean none of them, properly speaking, or which mean what the writer does not intend to say, and he meets with a style that is clumsy, verbose, and pretentious.

The examples I took were taken out of a whole bookful, to which I now propose to add your phrase, "vilipending the moderns." I cull a few more posies—

"The weight given in the entrance examination to Scripture knowledge often approaches vanishing point."—*Board of Education Report*.

"To abandon the principle of non-intervention" (= to intervene).—*Times*.

"That such an initiative might destroy the influence of the Young Turks of the Salonica persuasion is a contingency contemplated without serious misgivings."—*Times*.

"Enemies of learning display . . . their absence of aim."—*Creighton*.

"If the bullet had not missed a vital point, the sufferer could not have survived."—*Huntingdon Local Paper*.

"Even if the disadvantages apprehended by the Commissioners are fully realized, there may be counterbalancing advantages in the extension of the facilities for tramway locomotion in the metropolis that may justify the Committee in accepting the Council's proposals, either as presented to them or with modifications."—*W. Churchill on the Park Lane Tramway*. (= Even if it be a bad thing to run a tramway through Park Lane, to run a tramway through Park Lane may be a good thing.)

My point is that English can be quite clear, but it is not; and as we cannot reform the press (if only because its pages would be reduced by a half or more at once), we may counteract it by Latin and Greek.

To return to your question about Virgil, I think he is quite easy to understand. There are very few places where the meaning is really doubtful—not more than half-a-dozen, I think; for most of the alternatives given by Conington and others are not really possible, and that fact appears if Virgil is read aloud. I do not say it is easy to express his meaning in English, naturally and briefly. But this is outside the question at issue.—Yours truly,

Perse School, Cambridge,

February 18, 1912.

[Only the best of Latin literature has survived, and we have not the materials for comparing Latin and English journaleses. Hence we are compelled to compare the classics of the two languages to determine which of the two is the better instrument for the clear expression of thought. We have no hesitation in pronouncing in favour of English. As an analytic language, what it loses in brevity it gains in clarity. To take a single instance from Virgil (Eclogue IV), only the context can determine whether *risu* means "his smile" or "their smile," and of *Jovis incrementum* there are at least four distinct interpretations. So *patris amor* may mean "a father's love" or "the father's love" or "love for a father" or "love for his or her father." As to style, though we have no *acta diurna*, we would undertake to cap Dr. Rouse's elegant extracts from what remains of Latin light literature—Apuleius, for instance, and Petronius Arbiter.—ED.]

THE TEACHERS' REGISTRATION COUNCIL.

To the Editor of The Journal of Education.

SIR,—In your "Occasional Notes" for this month the first paragraph is headed "The Registration Council Secured," and records the safe passage through the Treasury of the Teachers' Council as proposed by Sir Robert Morant in White Paper, Cd. 5726. The second paragraph is headed "A Challenge to Mr. Somerville," and calls upon me to show cause why Sir Robert Morant should be considered to be "a pioneer of progress."

I am content to let the first paragraph answer the second, if you will allow me to make a correction in the second. I have not said that representatives of the State, of Local Education Authorities, and of the teachers themselves should sit together in one Council. King, Lords, and Commons do not sit together. I said that the three guiding forces in education are the State, the Local Education Authorities, and the teachers; that the first two have means of expressing their wishes and making their influence felt; that the teachers have hitherto been unorganized and powerless as a profession; and that the man who has now been chiefly instrumental in giving to the teachers what you, Sir, rightly term their *Magna Charta*, well balanced in every part, is a true pioneer of progress.—Yours faithfully,

A. A. SOMERVILLE.

Eton, February 1912.

[If Mr. Somerville will look again at our Note, he will see that "the challenge" was to answer Miss Wallis's indictment of the White Paper.—ED.]

HOME MUSIC STUDY UNION.

To the Editor of the Journal of Education.

DEAR SIR,—We shall be much obliged if you will kindly allow us through your columns to draw attention to the work and progress of this organization. For several years its executive committee has been arranging annual courses of study suited to various classes of music lovers, amateur as well as professional. In its official organ, the *Music Student*, the Union publishes special articles dealing with these courses and emphasizing special points of interest which they contain. The Union also issues textbooks on musical history and theory and thus provides many students of music with assistance which they otherwise could not readily obtain. "Music Circles" for the study of the courses exist in many towns, and the Young People's Section (especially suitable for the purposes of schools) has been greatly developed during the last two years. There are now about forty centres connected with the Union and about nine hundred members working under its direction. Conditions of membership and all further particulars may be obtained by application to the central office, 12 York Buildings, Adelphi, London, W.C.

W. H. HADOW, President.

ARTHUR SOMERVELL

C. HARFORD LLOYD

PERCY C. BUCK

} Vice-Presidents.

January 30, 1912.

DURHAM WOMEN'S HOSTEL.

To the Editor of The Journal of Education.

SIR,—I see that I am supposed to have signed the manifesto of the Durham Women's Hostel students, which appears in this month's *Journal of Education*. I should be glad if you will contradict this in your next issue. I received the manifesto and refrained from signing it because I was in sympathy with Mr. Walton's original article, and moreover did not consider the manifesto an answer to the charge against the hostel.

It has been brought to my notice that the home student who became a hostel student this term did so for pecuniary reasons, being offered an exhibition which is in the gift of the Principal of the hostel, so it can hardly be said to be because she preferred living in the hostel to being a home student. I am also aware that in the past several have left the hostel to become home students. I may also add that all past hostel students were not given the opportunity of signing the manifesto. They might not have wished to do so, but all have equal rights on such an occasion.—Yours faithfully,

E. E. CLARKE.

36 Sydney Street, London, S.W., February 14, 1912.

SAFE NOVELS.

Among the Idolmakers. By L. P. JACKS.
(5s. net. Williams & Norgate.)

This is a comedy half-way between the "Divina Commedia" and "La Comédie Humaine" of Balzac. It begins with broad farce: a brummagem manufacturer of idols, who subscribes largely to missionary societies and other philanthropic schemes; but this is the satiric drama, placed here as the prologue, not the *envoi* to the trilogy, and the rest of the book is a Purgatorio, with interludes which remind one of Balzac, more often of Swift. The idol-maker, among his other eccentricities, fathers the mad scheme of an Oxford don, the "Reformers' Paradise," a clearing-house for great ideas, variously known as the School of the Prophets, the New Settlement, the Republic of Genius, and Dennison's Folly. Here are gathered from all quarters of the globe eccentrics, cranks, spiritualists, faith-healers, Agapemonists, Millenarians, Theosophists, Nihilists, Thugs, and other blackguards; and the director, whose brain has been unhinged by the loss of a son, ends in a madhouse. Prof. Jacks lets his fancy run riot in this Bedlam, and as he hews in traces the follies and superstitions of the day he reminds us of Don Quixote among the wineskins. The cult of the Sacred Rat is a true bit of comedy. In a lighter vein is the satire on Preparatory schools, Public Schools, and the University Pass-man. We see flesh and blood a stage travesty of "the average boy." It is a cheerful but depressing book, and only in the story of "Mary" do we find something of the idyllic vein that so enchanted us in "Mad as a Hatter."

The Ship that came Home in the Dark. By AGNES GROZIER HERBERTSON. (6s. Methuen.)
It is an old-world plot, borrowed by the Romans from Greece,

refurbished by Shakespeare in his prentice days, and the staple since of comedies and romances by the score. Here we have two girl cousins alike as peas, one of whom marries the man with whom the other is in love. The only distinguishing mark is a mole, here on the left wrist, not on the conventional right breast. To aid the confusion, the husband is blind. The wife (let us call her A.) tires of her blind husband, and elopes with a married man, leaving B, the cousin, to break the news. B. consents, but finds when she reaches the house that the husband has been run over, and is lying between life and death. The temptation to play the wife is irresistible, and after his recovery she has never the strength of mind to disillusionize him. When her confession does come it is a day too late; she has betrayed herself by singing one of A.'s songs without A.'s mistakes. When the tragedy is at its climax the *deus ex machina* appears in the shape of the penitent wife, who falls into her husband's arms and is forgiven, and B. is provided with a discarded lover, who consents to overlook the escapade. Readers who can digest the wildest improbabilities will find plenty of excitement and some racy conversation.

A SOCIAL meeting of the Teachers' Guild was held on the 15th ult. at the North London Collegiate School, by invitation of Mrs. Bryant. The object of the meeting was to make known the more recent work of the Guild—in particular, the Secondary Teachers' Provident Society, now being formed in alliance with four other associations. Mr. Garrod, the General Secretary, stated that, as proposed, the Society would form two sections, one to administer the Insurance Act and the other to receive contributions and administer the special benefits to members, such as increased allowance for sickness and pension fund. Prof. Green, Vice-Chairman of the Council, was in the chair. The musical part of the entertainment was arranged by Mrs. Garrod.

THE LONDON Central Institute for Swedish Gymnastics, 16, 17, & 18, Paddington Street, Marylebone, W.

Telephone: 872 Mayfair.

The School World says: "This college for men students . . . will provide a first year's course fitting students for posts in elementary schools, and a second year's course enabling the graduate to take charge of any school of whatever standing. Anatomy, physiology, theory of movements, hygiene, and kindred subjects necessary for a complete grasp of physical training will be taught by experienced teachers. This will be a noteworthy addition to the facilities for training in this subject. . . . this new college has been most cordially welcomed by the Parliamentary Secretary representing the Board. . . . As a sign of progress, and in the hope of a better future for the physique of the youth of the nation, the new 'Central Institute' will be cordially welcomed."

PUPILS ARE NOW RECEIVED.

The Institute also undertakes the instruction in Physical Exercises on the Swedish System for Schools in the neighbourhood.

Recreative Classes—Gymnastics and Fencing—are held in the afternoons and evenings.

For particulars apply to the Principal—

Paton's List of Schools and Tutors,

**PUBLISHED ANNUALLY, is an Efficient Aid to
Parents in the Selection of Schools.**

*The following appeared in "The Journal of
Education" for October, 1911:—*

**PATON'S LIST OF SCHOOLS AND TUTORS,
1911-12. (2s. J. & J. Paton.)**

The fourteenth annual edition runs to over
eleven hundred pages. Photographs of leading
educationists in the Dominions and Colonies is a
new feature. There have been so many bogus
agencies, some of whose doings we have helped
to expose, that we welcome all the more the
growing prosperity of a firm against whom we
have heard no complaints and frequent commen-
dation.

HORACE MARSHALL AND SON

ENGLISH HISTORY IN ENGLISH POETRY from the French Revolution to the Death of Queen Victoria.

By C. H. FIRTH, M.A., LL.D., Regius Professor of Modern History
in the University of Oxford. Annotated. Price 2s. 6d.

This book contains a long and valuable introduction, dealing with the
manner in which the poetry of the period may be used to illustrate its
history, together with selections from the poems, classified according to
the topics to which they refer. It is intended to be studied in connexion
with the history of the period in the Upper Forms of Secondary Schools.

COLONIAL HISTORIES.

This series is intended to supply the need for short interesting histories
of British Colonies and Dependencies, written simply, but clearly and
definitely, and suitable for use in the Upper Forms of Schools, and in
Training Colleges.

1. **AUSTRALIA.** By THOMAS BATESON, M.A., Director of Educa-
tion to the Waterloo with Seaforth Education Committee.
2. **CANADA.** By C. L. THOMSON.
3. **INDIA.** By M. A. HOLLINGS, M.A., Assistant Lecturer in Educa-
tion to the University of Birmingham, formerly Head Mistress of
the Church of England College, Edgbaston. Price 1s. 6d. each.

THE BRITISH ISLES.

By E. M. HUGHES, M.A. (Dublin). Illustrated. 1s. 6d.

An introduction to the Study of Geography, suggestive to the teacher
as well as interesting to the children.

THE POETRY READERS.

Edited by ALFRED PERCEVAL GREAVES, M.A., formerly one of
His Majesty's Inspectors of Schools. Price 8d.

GENERAL HISTORY.

In view of the growing opinion among advanced educationists that the
History teaching in our Schools should not be limited to that of our own
country, Messrs. HORACE MARSHALL & SON have published a cheap
General History in Three Parts. Each part contains about 250 pp., and
is well illustrated. Price 2s. 6d. per Volume.

Part I.—**ANCIENT HISTORY.** By W. H. SALTER, B.A., LL.B.,
late Scholar of Trinity College, Cambridge.

Part II.—**MEDIAEVAL HISTORY.** By M. A. HOWARD, B.A.,
late Scholar of Girton College, Cambridge, and Head Mistress of
the Dulwich High School.

Part III.—**MODERN HISTORY.** By A. J. EVANS, M.A.

THE NEW LATIN DELECTUS.

By W. JENKYN THOMAS, M.A., and E. P. DOUGHTY, M.A.
Illustrated. In Two Parts. I, 1s. 6d.; II, 2s. 6d.

For the earlier reading of boys and girls in schools with a leaving age
of about sixteen.

The *Athenaeum* says:—"Simplified Livy, Eutropius, and in verse Horace,
Ovid, &c., are used; and the whole seems admirably fitted to take the place of
the Caesar usually given at this stage, which may well be postponed."

A FIRST HISTORY OF ENGLAND.

By C. L. THOMSON, F.R.Hist.S. In Seven Volumes. Price 1s. 6d.,
2s., and 2s. 6d. each. Also in Two Volumes, price 6s. 6d. each.
Cloth, crown 8vo, fully illustrated.

BIOGRAPHICAL READERS.

HEROES OF ISRAEL.
HEROES OF THE HEBREW MONARCHY.
HEROES OF WALES.

Fully Illustrated Edition for School Use, 1s. 4d. each.
Prize Edition, 1s. 6d. each.

ILLUSTRATED EDUCATIONAL CATALOGUE WILL BE
SENT POST FREE ON APPLICATION.

MADAME BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1883, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studios, is situated on very high ground, gravel soil, on the confines of an extensive beach, half an hour from town. It stands in its own free grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnasium, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers.

Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

To place members of this Union as Teachers in various schools, careful and discriminating choice is exercised, and the exact requirements of each School are considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

RESIDENCE for Students, Teachers, and others, at various addresses. Full or partial board, single or double occupancy. References exchanged.—Miss H. J. Tuke, 2 Barton Street, Tavistock Square, W.C.2.

DRAPERS' COMPANY'S GIRLS' SCHOLARSHIPS.—The Drapers' Company are about to award THREE SCHOLARSHIPS to enable specially promising Girls to study at some place of advanced education, either in special subjects to be approved by the Company, or for the Degree Examination of a University in the United Kingdom.

The Scholarships will be of the value of £60 per annum each, and will be tenable for two or three years. To be eligible for them, Girls must be between 17 and 19 years of age on the 1st June 1912, and must have passed some approved Public Examination and give other evidence satisfactory to the Company of successful study. The Parent or Guardian of every candidate must satisfy the Company that she needs the assistance of the Scholarship to carry on her education.

In the award of one of the Scholarships, preference will be given to a Girl who has, for not less than three years, at some time attended a school in the County of London.

Further particulars may be obtained on application to the CLERK TO THE COMPANY, Drapers' Hall, Throgmorton Street, London, E.C.

SOLEY SCHOLARSHIP AND EXHIBITION FUND.

The Drapers' Company are about to award TWO SCHOLARSHIPS of £60 per annum, tenable for two or three years, at some place of advanced education for the study of Theoretical or Applied Science, Art, Medicine, or Law, or the Degree Examination of some University in the United Kingdom. The Scholarships will be awarded to (a) Sons or Grandsons of Freeman of the Drapers' Company between 16 and 20 years of age on the 1st June, 1912; (b) other boys of the same age. The Parent or Guardian of every candidate must satisfy the Company that he needs the assistance of the Scholarship to carry on his education.

The Company will shortly have the right also to nominate for an EXHIBITION of £70 per annum, tenable for three years at King's College, Cambridge, a Son or Grandson of a Freeman of the Company of not more than 20 years of age.

Further particulars may be obtained on application to the CLERK TO THE COMPANY, Drapers' Hall, Throgmorton Street, E.C.

SIR JOHN JOLLES EXHIBITION ENDOWMENT.

The Drapers' Company are about to award an EXHIBITION of £60 per annum, tenable for two or three years, at a University or Institution of Technical, Professional, or Industrial Instruction. The Exhibition will be awarded to Boys between 16 and 20 years of age on the 1st of June, 1912, who have for not less than two years at some time been in attendance at a Public Elementary School, with a preference for such of them as have attended Public Elementary Schools in the ancient parishes of Stratford le Bow or Bromley St Leonard.

Further particulars, with forms of application, may be obtained from the CLERK TO THE DRAPERS' COMPANY, Drapers' Hall, Throgmorton Street, E.C.

SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

MESSRS. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

LONDON.—House of **RESIDENCE FOR STUDENTS** near Kensington, with 13 students now in residence, whose average receipts amount to £26 per week. Students are all over 20 years of age, and are girls of good families.—T 1,188.

ESSEX.—Good-class **BOARDING AND DAY SCHOOL FOR GIRLS**; 74 pupils, of whom 8 are boarders. Receipts £1,321, profit £302. Delightful premises built regardless of expense. Grounds of nearly an acre, with good tennis and croquet lawns. The school can be bought at a bargain as only £300 is asked for goodwill, or one term's capitation fees.—T 1,186.

SURREY.—Very flourishing **GIRLS' HIGH SCHOOL**, with Kindergarten; old-established. 85 pupils, 16 of whom are boarders. Receipts £1,200, net profit £300. Splendid schoolroom accommodation for 120 pupils. Good residential neighbourhood, with plenty of scope for increasing present number of pupils.—T 1,189.

HOME COUNTIES.—Large, old-established, and very successful **BOARDING AND DAY SCHOOL**. Principal retiring. 50 boarders, 100 day pupils. Gross receipts over £3,000. Profit £500. Fine premises with field for games. Capitation fee accepted on all pupils transferred. Personally inspected and strongly recommended.—T 1,158.

LONDON, N.—Old-established **BOARDING AND DAY SCHOOL**, with Kindergarten. Principal retiring from the teaching profession. 5 boarders, 60 day pupils. Gross receipts over £1,000. Entire goodwill only £400.—T 1,157.

SUSSEX.—High-class **SCHOOL** for the Daughters of Gentlemen, which is always full, at a

delightful seaside resort. Receipts about £3,500; average net profit last three years nearly £900. Entire goodwill, to include most of the furniture, £2,400, or a partnership could be arranged.—T 1,146.

KENT.—First-class **BOARDING SCHOOL** for the Daughters of Gentlemen, at a favourite seaside resort; 36 boarders; fine premises. Receipts over £4,000; capitation fee accepted on pupils transferred. Partnership would be considered for twelve months in order to give thorough introduction.—T 1,148.

SCOTLAND.—The Principal of a high-class **BOARDING SCHOOL** would receive an experienced and well qualified lady into **PARTNERSHIP** with a view to succession. The school yields a net profit of about £700 per annum. If desired, the Principal would remain a sleeping partner, leaving entire charge and control of the school in the hands of the incoming partner.—T 1,132.

SURREY.—**BOARDING AND DAY SCHOOL FOR GIRLS**, with preparatory department for little boys. 3 boarders, fees £30 to £80 per annum; 39 day pupils, fees £6 to £12 per annum. Receipts £630; rent £75. Capitation fee accepted for goodwill.—T 1,066.

YORKSHIRE.—**BOARDING AND DAY SCHOOL**. 48 pupils, receipts £1,150. Splendid premises, including gymnasium; garden of one acre. Entire goodwill, £500, or near offer.—T 242.

DEVON.—**BOARDING AND DAY SCHOOL**. Principal retiring. School established for past 24 years. 12 Boarders. 38 Day Pupils. Receipts £740, profit £140. Capitation fee accepted.—T 1,082.

NO CHARGE TO PURCHASERS.

Full particulars of the above and others may be obtained on application. Intending purchasers are invited to write stating their requirements. Address—158 to 162 OXFORD STREET, LONDON, W.

THE VEGETARIAN SOCIETY'S SUMMER SCHOOL.—A holiday at ARNSIDE, WESTMORLAND. July 27 to August 31. Lectures, Concerts, charming walks, Tennis, Cricket, and other games. 30s. a week inclusive. Full particulars from 257 Deansgate, Manchester.

VOICE TRAINING FOR SPEAKERS, SINGERS, AND STAMMERERS.—Apply to Mrs. EMIL BEHNKE, 18 Earl's Court Square, London. Author of "The Speaking Voice," &c. "Pre-eminent success."—*Times*. "Mrs. Behnke is well known as a most excellent teacher upon thoroughly philosophical principles."—*Lancet*.

"STAMMERING," 1s., post free. Classes for the Clergy and members of the Legal and Scholastic Professions. Special Classes, by request of medical men, for Respiratory Drill and Chest Expansion.

MISS MIRAN LUCAS, Violinist (Leader of the "Lucas String Quartet"). Six years' training under Professors Sevcik and Rosé in Prague and Vienna. Several years' teaching experience in Vienna. Open to teaching engagements (non-resident). Schools or private. Ensemble-playing a speciality. For terms, &c., apply—11 Defoe Road, Tooting, London.

OUT OF PRINT.

THE BOUND VOLUMES of "THE JOURNAL OF EDUCATION" for all years down to 1883 (inclusive) and also for 1885, 1889, and 1907 are out of print. Binding cases cannot be supplied for years previous to 1891. All Monthly Parts down to Dec., 1882 (inclusive); and also for June, 1885; Dec., 1885; Nov., 1887; Jan., 1888; Feb., Oct., Nov., 1896; and April, 1897, are out of print.

MENTHOLIN PASTILLES

RELIEVE TIRED THROATS.

Used as directed, the vapour of their ingredients (Menthol, Eucalyptus, Creosote, Formaldehyde) is brought into contact with the whole mucous tract of the throat and nose, immediately removing congestion.

In quarter-pound boxes, 1/4 post free, from—

EDMUND WILLCOCKS, Pharmacist.

3 BROADWAY, LUDGATE HILL, E.C.

DEPARTMENT FOR TRAINING TEACHERS
FOR SECONDARY SCHOOLS.

Theory, Practice, and History of Education: J. W. ADAMSON, B.A., Professor of Education (Head of the Department).

Psychology: W. BROWN, M.A., B.Sc., Lecturer.

The Course, which includes Practical Work in Secondary Schools, extends over one academic year, beginning in OCTOBER or JANUARY. It is suitable for those who are preparing to take the Teachers' Diploma of the University of London.

The Fee is £20 for the year if paid in advance, or Eight Guineas per Term (Three terms in the year).

TWO SCHOLARSHIPS of £20 each for One Year, tenable from October, 1912, are offered to suitable Candidates (Men) who are Graduates of a British University.

Application should be made to Prof. ADAMSON, King's College, Strand, W.C.

EASTER HOLIDAYS.—A Party

of High School Mistresses is being arranged to visit GREEN LADY HOSTEL, LITTLE-HAMPTON. Terms 15s. a week. Specially arranged railway fare from London, 5s. return. Particulars from LADY SUPERINTENDENT. Hostel vacant from April 15th.

ASSISTANT MISTRESS retiring

from post as Senior English Mistress in public Girls' School offers COACHING for Higher Local, University Scholarship, or similar examinations. Long experience and success in such work. Subjects: History, Literature, Early English, French, History of Education. Address—No. 9, 305.

Replies to these advertisements should be addressed "No. —, The Journal of Education, 3 Broadway, Ludgate Hill, E.C." Each must contain a loose stamp to cover postage on to advertiser. Post Cards will NOT be sent on.

Other Transfers and Partnerships are continued on pages 265 and 266; other School and Teachers' Advertisements are continued on pages 266, 267, 268, 269, 270, and 271.

Sale or Transfer.

BOYS' SCHOOL FOR SALE,

Seaside. 30 Day Pupils, 2 Boarders. Average gross income, £500. Exceptionally good premises; separate School buildings. Moderate rental. Goodwill and School Furniture, £130. Bargain!—1,684, Hooper's, 13 Regent Street, London.

GIRLS' SCHOOLS and PARTNERSHIPS FOR SALE.—

(a) **Cheshire.** 10 Boarders up to 75 guineas, 28 Day Pupils up to 27 guineas. Numerous extras. Receipts nearly £1,400. Goodwill by capitation.

(b) **Lancs., Seaside.** 21 Boarders up to £60, 30 Day Pupils up to £20. Numerous extras. Two large houses connected, one Domestic Economy College. Partner wanted to manage this. About £500 needed.

(c) **Surrey.** Partnership. 16 Boarders, 67 Day Pupils. Receipts about £1,200. Moderate price for half share.

(d) **London, N.** 4 Boarders, producing £180; 57 Day Pupils, £801, and 11 occasional pupils. Total receipts over £1,000. Goodwill £400.

(e) **W. of England.** 6 Boarders, 44 Day Pupils. Receipts £600. Rent of large semi-detached house in best suburb, £65. Goodwill £180.

(f) **Near London.** 34 Day Pupils, producing about £340 a year. Owing to increase in number of Boarders, vendor is moving these into the country. Day School could be greatly developed and Boarders added.

Further particulars of the above, and of many other Schools and Partnerships, from BIVET & CO., University Scholastic Agency, 122 Regent Street, W. No charge to purchasers.

Partnerships Offered and Required.

THE Principals of a well-established high-class BOARDING AND DAY SCHOOL on South Kent Coast wish to meet with a Lady desiring either to remove to the sea or to purchase whole or part interest with view to succession. Goodwill and furniture £1,800, or capitation fees and furniture at valuation arranged if preferred, in the event of purchasing outright. Profits over £500 net. State qualifications, &c. Address—No. 9, 288.

EXPERIENCED Teacher, with small capital, wishes to join lady as Partner in well-established Preparatory School, capable of extension. Healthy locality. North or Midlands preferred.—Miss W., c/o Mr. Bateman, Scothern, Lincoln.

Opening for Boarding House.

IN first-grade Public School for Girls, not far from London. Possible opening for a second BOARDING HOUSE. Some capital and a personal connexion essential. Address—No. 9, 297.

A HUNDRED YEARS OF HISTORY from Record and Chronicle, 1216-1327.

By **HILDA JOHNSTONE, M.A.**, Assistant Lecturer in History, The University, Manchester.

Crown 8vo, 5s. net.

[Just Published.]

This book consists of extracts from records and chronicles of the period, put into English, and arranged so as to form a readable and fairly continuous narrative. Footnotes are purposely omitted except where imperative, the authorities used are described in a short appendix, and the general aim is to show the entertainment as well as the value which lies hidden in places somewhat inaccessible to the general reader. The records used are treaties, Royal and papal letters, statutes, and writs of summons to Parliament, including those recently discovered. Among the chroniclers are Rodger of Wendover, Matthew Paris, William Rishanger, Thomas Wykes, Walter of Hemingburgh, the so-called Monk of Malmesbury and Canon of Bridlington, Geoffrey le Baker, besides various monastic and civic annals.

AN ANTHOLOGY OF MODERN ENGLISH PROSE, 1741-1892.

By **ANNIE BARNETT**

and **LUCY DALE**, late Scholar of Somerville College, Oxford.

Crown 8vo, 4s. 6d.

A book for use in Secondary Schools, Training Colleges, and Pupil Teachers' Centres. This book has been prepared to meet the Board of Education's requirements in the teaching of English Literature. It contains prose selections from the times of Samuel Richardson and Henry Fielding down to Robert Louis Stevenson—that is to say, from the latter part of the seventeenth century to the close of the nineteenth.

The Editors in this compilation have endeavoured to include most of the writers of great mark, and to choose from their works passages of substantial length that are characteristic and complete, some being preferred for their beauty or impressiveness of diction, and others for their interest as distinctive of the writer's style and method. Notes have been added only where a word of explanation seemed absolutely necessary to make the meaning clear.

LONGMANS, GREEN, & CO., 39 Paternoster Row, London, E.C.

Nelson's Encyclopædic Library.

One Shilling Net. Vol. I Ready April 3rd.

MESSRS. NELSON & SONS have arranged to follow up the issue of their Nelson's Encyclopædia—the most popular Encyclopædia ever published—with a series of monthly volumes to form **Nelson's Encyclopædic Library**. The issue of these volumes will make Nelson's Encyclopædia not only the handiest and cheapest, but the most complete Encyclopædia in the world.

A modern Encyclopædia must be one or other of two types. It may be a collection of treatises written by the chief experts on the subject, such as the "Encyclopædia Britannica." In that case the number of entries must be limited, and while it contains information of high value to specialists, it will omit much that the ordinary man wants.

On the other hand, an Encyclopædia may aim at giving succinct information on a vast number of subjects in such a form that anyone can easily consult it. Of such a type is Nelson's Encyclopædia. It is a true, handy work of reference. The one drawback, however, to such a work of reference is that it is impossible to provide such treatises as specialists would desire. It has to be compiled according to scale, and if it is to include almost every item of human interest, it cannot enlarge unduly on any one.

Now nearly every man is a specialist in some department or other, and wants expert guidance. The huge Encyclopædia, the collection of treatises, does not give him a work of handy reference, though it may give him all he wants on his special subjects. A more popular Encyclopædia may be an excellent guide to general information, but it does not give him quite enough on his own subject.

Messrs. Nelson believe that the best way to meet this difficulty is to provide, as an addition to Nelson's Encyclopædia, a number of volumes which may be called an **Encyclopædic Library**. These volumes will be devoted to a fuller treatment of the great divisions of human knowledge. With the addition of Nelson's Encyclopædia they will give the ordinary man all that he can possibly desire—namely, the handy work of reference, together with the fullest treatment of his special subject.

The series will include two types of volume. In the first place it will contain specialized works of reference, such as dictionaries and concordances of various kinds. In the second place it will contain, in an encyclopædic form, volumes dealing with special subjects, such as engineering in its various branches, Agriculture, Economics, Commercial Practice, Science, &c. These volumes will be in the strictest sense supplements to Nelson's Encyclopædia, providing the treatises which cannot be given conveniently in a popular work of reference. The Encyclopædia, together with the Encyclopædic Library, will give to everybody a complete guide to knowledge, which shall be at once cheap in price and handy in form, easy to consult, exhaustive, and up-to-date.

The volumes will be published monthly, beginning in April, at the same price and in the same form as Nelson's Encyclopædia. It may be necessary at a later date, in the case of special volumes, to slightly increase the price, but the following volumes will be published at **ONE SHILLING** net:—

- | | |
|-------------------------|--|
| <i>April</i> | A Dictionary of Idiomatic English Phrases , containing full explanation of all specialized and idiomatic terms and phrases. |
| <i>May</i> | A Dictionary of Dates (In 3 volumes). Volume I. |

OCCASIONAL NOTES.

THE Free Churchmen were not mollified by Mr. Asquith's letter to the Rev. F. B. Meyer promising in an Education Bill next session to redress the grievances of Nonconformists, and adopted a unanimous resolution condemning the postponement of the measure. We share the regret, but consider the delay inevitable and we strongly disapprove the Church-militarism of Dr. Clifford. Not only did he denounce "the spirit of compromise which was in the air" as a sign of weakness, but he threatened the Government with the withdrawal of Nonconformist support from many causes to which it is pledged. This, if we may borrow the language of the pulpit, is to bring the ark of the covenant into the camp.

THE Single School Areas Bill, introduced by Sir George Marks, must be looked upon as an experimental trip to see how the land lies. It has passed its second reading and has been referred to a grand committee of the House. We shall probably hear little more about it. Mr. Pease expressed mild approval of the Bill as an honest attempt to grapple with a section of an admitted grievance; but he added that the Government proposed next year to deal with the subject on a national basis. The question will naturally be asked: Why trouble about a partial solution of the problem if the whole matter is to be dealt with next year? The Standing Committee of the National Society has issued a statement that it is altogether unable to accept the measure. The Catholic Education Council have unanimously condemned the

Bill and blame the Nationalist Party for supporting it. The Bill is not even officially supported by the Nonconformist Parliamentary Committee. Under these circumstances we cannot think that Sir George Marks has much chance of success in his well meant efforts.

THE Single School Area Bill is said to affect 5,706 schools. The alleged grievances are two. In the first place, parents are compelled to send their children to schools the religious teaching of which they do not approve. Secondly, the head teachers of these 5,706 schools are partly chosen on account of their expressed willingness to teach the formularies of a certain Church. This second grievance is met in the Bill by saying that no part of the denominational teaching may be given by any teachers employed in the school. The first grievance is met by a proposed transference of the school to the Authority in one of three ways. The school house may be "transferred absolutely" or "conditionally," reserving its use on Saturdays and Sundays, or there may be a "limited transfer" between the hours of 8 and 5 on five days a week. Under either of these transfers the clergyman or other person would have the right of giving denominational teaching on two mornings a week.

IT is this condition, commonly known as "the right of entry," which causes all the trouble. It seems reasonable enough, in a small village school, provided there is a classroom, that the clergyman or his nominee should come in and give religious instruction on two mornings a week. The practical difficulty occurs when there are several ministers of religion claiming the same rights; and the larger the school the greater the difficulty. The Church of England makes this further claim that, if the right of entry is conceded in what are known as Church schools, the clergy must also have the same right of entry for the purpose of giving denominational instruction in all provided schools. No solution will meet the wishes of extreme men on either side. We think that, if sound non-doctrinal teaching is given in all schools by the teachers in those schools, the ministers of religion may be well content to teach doctrine from the pulpit and in Sunday schools. But now we must wait and see what the Government proposals will be next year.

LORD ROBERT CECIL moved the familiar vote that the salary of the President of the Board of Education should be reduced by £100; but he had very little material on which to base his attack upon Mr. Pease. The Swansea case was trotted out; but that is now a matter of ancient history, and the Board have long ago repented in such sackcloth and ashes as it is convenient for a Board to wear. Another charge, warmly supported by Sir William Anson, urged that the regulations for secondary schools had been partially administered in order to discourage a particular sort of religious teaching which the party in power disapproved. Mr. Pease had little difficulty in meeting these charges. Most of our readers will agree that, if a denominational secondary school applies for a grant of public money on the ground of supplying secondary education to the area, precedence must not be given to the doctrinal teaching of one church or sect. This view does not prevent our agreement with Lord Hugh Cecil, who said that "no cant was more con-

Bill.

Single School
Areas.

The Education
Estimates.

The
Right of Entry.

temptible than that of pretending that religion was not the most important part of education."

BIBLE TEACHING is at present much to the fore, and we could wish that an investigation carried out by a teachers' club could be pursued on a larger scale.

**Bible Teaching
in Elementary
Schools.**

Questions were set with the object of ascertaining the contents of children's minds, what they knew and what they thought of Scripture subjects, and these were answered by some three hundred children in London Council schools. "The favourite hero (or man) in the whole Bible" was (in order of preference) Jesus, Moses, David, Joshua. "The wickedest person" was Satan, Judas, Saul, Herod, Jezebel (Jessie Bell). "The best person" was Jesus, God, Moses, David. "Whom would you most like to meet now?" Jesus, Moses, God, Ruth (Rufi). "Who wrote the Bible or any part of it, and in what language?" was quite beyond them. "A Very High Priest in English," and "Satan and Adam in Egyptian" are typical answers. Asked the meaning of "sinners" in the text that had been learnt by heart, "Jesus came into the world to save sinners," two children answered: "What's left in the grate when the fire's out." Of the moral impression left by Bible lessons, it is difficult to judge. Thus half approved and half disapproved Jael's deed.

ONE or two inferences it is safe to draw. Theology, even the rudiments, is beyond the grasp of young children. Infant teachers dread the visits of Diocesan

**Specialist Bible
Teachers.**

Inspectors, who are shocked if mites of five cannot repeat: "I have two fathers, an earthly and a heavenly; Jesus had only one"; or tell the story of the Fall. Secondly, the syllabuses need careful revision. In one before us four Bible stories occupy a whole year for infants—i.e., 180 lessons, and some of the hymns which occupy the fifth day of each week are wholly unsuitable. But what is most impressed on us by this investigation is that of all subjects Bible-teaching most needs a specialist, and should not be indiscriminately entrusted to the class teacher.

IN the debate on the Army Estimates Sir Henry Craik, in urging the necessity for improving the pay of army officers, asserted that, under pressure from

**Army
Officers.**

the War Office, the Army Qualifying Examination Board, over which he presided for many years, had been obliged to lower the standard of their examination, with the result that men were being admitted as officers who had not reached a proper standard. This is a grave accusation, not disposed of by the official *dementi* of Colonel Seely next day. He pointed out that a considerable number of entrants to the military colleges obtained leaving certificates of a higher standard than the Army Qualifying Certificates; but he did not explain that the Universities had been induced to approve a special standard for leaving certificates "for army purposes" lower than for their own matriculation. On the whole question of the education of officers, his advisers told him, so Colonel Seely said, that they were satisfied that the standard of education of officers who passed into the army from Sandhurst and Woolwich was higher and better than it had ever been. This, however, is beside the point if it is true,

which we very much doubt. The main question, from the national standpoint, is whether the boy who—sometimes at sixteen and a half years of age—passes a simple Army Entrance Examination, or is nominated by his head master for admission to the College, and then does his year at Sandhurst and accepts His Majesty's Commission, can be pitted against the highly trained Continental officer.

MUNIFICENT gifts for the purpose of erecting a visible home for the University of London have been a long time in coming. But now the stream has begun to flow, and in its flow will undoubtedly gather force until the many hundreds of thousands required have been subscribed. An anonymous friend has offered £100,000 as a start, and the Drapers' Company offer £60,000. The trustees of the Bedford estate have offered a site for £50,000 less than its value, and the Duke of Bedford will give a personal donation of £25,000. Sir Francis Trippel, who, as the *Times* tells us, "holds an option from the Duke of Bedford for the purchase of the site, has undertaken, acting in an honorary capacity and bearing all incidental expenses, to raise £1,000,000 for the erection of such new head-quarters for London University as will be worthy of the capital of the Empire." The proposed site is the land that has recently been cleared behind the British Museum.

SUCH an article as "Our Public Schools and their Influences" in the last *Nineteenth Century* fills one with despair. It is an illogical, invertebrate, and ill informed glorification of Matthew Arnold's

Athletolatry.

"Barbarians" and a denunciation of grinding German study. That distinguished statesmen and soldiers still hold such sentiments we know too well, but what alarms us is that the editor of the *Nineteenth Century* should think that they would be relished by his readers. We will not reason, but look and pass on.

Our soldiers and sailors revel in games. Every Board school has an ample playground.

It is related of the late Lord Kelvin that, having become enamoured, he joined his college boat at Cambridge and thenceforth was able to think and talk of nothing else but the races.

There is something elevating to the character of individuals who are entrusted with the duty of making an earnest effort to serve a communal purpose.

The communal purpose is not School Missions or Cadet Corps, but cricket or football.

A STRONG Commission has been appointed to inquire into the methods of appointment and promotion in the Civil Service. The publication of extracts from the so-called "Holmes Circular,"

**Royal Commission
on the
Civil Service.**

resulting in an agitation supported by the National Union of Teachers, has brought to light a great deal of dissatisfaction with existing conditions. There are three main lines of complaint. Certain posts in the Civil Service are given to men of good education *plus* good social position: want of social position is said to be a bar to promotion into higher grades; the competitive examination system has been seriously attacked. With regard to the first two grievances we can only say that in such matters the spirit of the age rules, and that spirit is changing. With regard to competitive examinations, we are bound

to say that no suitable alternative has been suggested. We hold that there must be these examinations; but their scope may be varied as experience directs.

THE Annual Report of the Board of Education that has just been issued contains a chapter on curriculum that clearly indicates the growing enlightenment of the Board. Briefly, it is maintained that the old "bookish" education is giving way to a more reasoned view of school life, in which all the activities of the child have scope for development, both bodily and mental, both in work and in play. An attempt is made to fit the education more closely to the life and experience of the child, and to make it more suitable to his or her wants on leaving school. Hence it follows that differentiation is taking place between the education of the boy and of the girl. One feels that, if Mr. Edmond Holmes had been able to issue such a report during his tenure of office, he would have been less severe in describing "What Is." We must, however, not be misled by written reports. We welcome these utterances of the Board as indicating right tendencies, but we cannot for a moment deceive ourselves into the belief that the education given in all elementary schools is equal to the sample approved by the Board.

MRS. BRYANT (with other head mistresses) wrote to the *Times* asking teachers who are registered on Column B not to be in a hurry to claim their guineas, as such a claim may cause financial embarrassment to the new Registration Council. She also pointed out that the register remains in existence so long as the names are not withdrawn. The letter was closely followed by one from Mr. Cholmeley, writing as Hon. Sec. of the Federal Council of Secondary Schools Associations, in which an entirely opposite view is expressed. Mr. Cholmeley says that any one who leaves his guinea unclaimed may be regarded as a benefactor to the taxpayers; but that his abstinence will have no effect upon the Registration Council. He also expresses the opinion that the new Council will afford no differential treatment to those whose names appear on the old register. Our readers must take their choice between the two views; but we advise the Column B-ites to take the long deferred guinea in the hand, and not wait for the one bird in the bush.

AT a recent meeting of the Cambridge University Fabian Society, Mr. Holmes, as we learn from a report in the *Schoolmaster*, gave an interesting account of the genesis of the famous Circular. It seems that Sir James Yoxall came to him one day with a complaint about local inspectors, who, he said, were seeking to reimpose a vicious system of examination upon the schools. Mr. Holmes agreed that some of these inspectors were the products of a bad system, and he therefore asked his staff to send in reports on the inspectors of the Local Authorities, and he summarized these reports in racy language, never dreaming the document would become public. This is, we believe, the first time that Mr. Holmes has spoken in public upon this matter. He said that "detachment" was more valuable than experience, if the experience had been in one groove; but that there was no idea of patronage in his mind. His one object was to

achieve greater efficiency in the all-important subject of national education.

JUST a hundred years ago, as we are told in the *Westminster Gazette*, a Bermondsey minister named Townsend planned a school in which twelve "decayed" Congregational pastors were to teach the sons of their brother ministers. Such a statement gives us a standard whereby to measure the enormous strides that have been made in the qualifications considered necessary in a teacher. To-day the highest qualities are not thought too good to devote to the training and education of children. Caterham School, of which we are speaking, is in need of additional financial support, and the centenary of the foundation affords an opportunity for an appeal. A special outlay was incurred a few years ago by the reconstruction of the drainage system. When the trouble was discovered suddenly, the head master, like Thring in a former generation, promptly moved the whole school for the rest of the term to an hotel on the sea coast. The pluck of the head master under the circumstances deserves wide recognition.

AT a meeting of the Teachers' Training Association last month, Prof. Welton of Leeds offered some valuable advice to teachers. He urged upon us all a study of the history of education, especially because such a study prevents the narrow view that the teacher is apt to take of his functions. The besetting sin of teachers is to forget the axiomatic truth that school is but one factor in education. In the history of education "nothing stands out so clearly as do the evil results of the school losing touch with life, refusing to be influenced by the remonstrances of the outside public, and holding on in the dogmatic assurance that it alone is great and wise and good." There are many causes that tend to cut the teacher off from the general current of life, and to make him exaggerate the value and influence of school. To be on guard against the tendency is something; and we may thank Prof. Welton for his reminder.

MR. J. L. PATON, High Master of Manchester Grammar School, gave an address the other day in which he appeared to concur with the findings of the Consultative Committee on the subject of school examinations. They must, he said, obtain the co-operation of examining bodies and banish competition between them. There must be an Examination Council to control and co-ordinate the different examinations for which schools prepare their pupils. Mr. Paton thinks that all preliminary examinations should be swept away, and that there should be one examination for pupils of about the age of sixteen and another at the age of eighteen. He trusted greatly in the Board of Education, though he would not leave the matter entirely in their hands. We hear nothing so far of steps taken by the Board to carry out the recommendations of the Consultative Committee; but there can be little doubt that the times are ripe for movement in this direction.

WE make no apology for reprinting in our Supplement a translation of Coppee's "La Grève des Forgerons," which appeared in *The Journal* just five-

The Strike.

and-twenty years ago. But it may be well to add that we reproduce it because the subject is to-day uppermost in all minds, and because the poem is a brilliant example of what Mr. R. H. Hutton called semi-dramatic utterances, not as expressing our own views on the coal strike. If we were asked what in literature is the fairest presentment of the present crisis we should name Mr. Galsworthy's play "Strife." It is pleasant to note that so far this strife, though bitter, has been free from violence and riot, and that the first care of the community, masters and miners included, is that the children shall not suffer.

In a paper on Classical Teaching that appears in the March number of the *Teachers' Guild Quarterly*, Prof. G. G. Ramsay endorses a "famous saying" of the late Lord Goschen:—

**Classics
v.
Modern
Languages.**

You may take it from me that in every sentence which you translate from Greek or Latin, or into Greek or Latin, there are at least five as many intellectual operations to perform as there are in a similar performance in English, French, or German.

A critic might well object that a famous saying, however hyperbolic, should at least be clearly expressed, but we prefer to join issue on the fact. Last month we set for our Translation Prize a passage of French prose, and of the two hundred and fifty competitors not one performed successfully all the intellectual operations (two or three at most, according to Lord Goschen) that it required. Will any one maintain that to translate a passage of Greek or Latin prose into English would have required five times the amount of ability? We would further point out the exploded fallacy that underlies the argument. It is assumed that the harder the task set the more effective is the mental gymnastic. Carried to its logical conclusion, the theory would require us to be teaching in our schools epigraphy or hieroglyphics.

LOCAL AUTHORITIES.

THE Bucks County Education Committee have drawn up and

**Friendly
Advice.**

issued two Friendly Letters of Advice, one for boy "leavers" and one for girl "leavers." A copy is to be given to each child after the later medical inspection, when the child is over twelve years of age. The letters deal first with the choice of a career and suggest consultation with parents and teachers. Advice is given as to the qualities that an employer looks for, such as honesty and smartness. Especial stress is laid on the qualities of cheerfulness, kindness, and civility. We suspect that the children who receive these letters have a larger supply of these qualities than children in the middle classes: but the suggestion will do no harm. Personal cleanliness is also dealt with. It is difficult to write advice of this kind which is to be handed to all children, whatever their circumstances; but, on the whole, we think these leaflets are successful, and should prove helpful.

AN interesting example of the enterprise and push that are

**Unauthorized
Persons
in Schools.**

developed under modern economic conditions is related in the report of the Bucks Education Committee. A certain man—we refrain from quoting his name—"who is described as a qualified masseur and physical culture and health expert, has visited a number of schools without authority and endeavoured to obtain the names and addresses of children suffering from spinal curvature, round shoulders, weak hearts, and general undevelopment." The Committee draw attention to the regulation that forbids the presence of unauthorized persons on school premises during school hours; and reminds head teachers that the records of medical inspection are strictly confidential. One would not have thought that touting for

business in this way would have proved remunerative to a "physical culture expert."

FROM the Teachers' Training Department of the University College of North Wales we have received a copy of a report on the training of teachers for rural schools. The matter is one of considerable importance.

There is certainly at the present moment, as the report states, "a tendency for the urban schools to absorb too much the main strength of the teaching profession, and there is an inadequate number of rural teachers who have that interest in country life which will enable them to give their pupils a rural bias. As the result, an unconscious bias is often given to town life, which the teacher at heart prefers. This is particularly to be regretted in view of the enormous intellectual influence which a teacher in country districts can exercise, his weight with the adult population being there far greater than in towns." To put it in the language of the labour market: salaries are lower in the country, therefore on the whole the less efficient teachers are found there.

THE arguments that are said to justify lower salaries in rural districts are two: lighter work and economy of living. The report before us controverts both these arguments.

We are told that "the work of the rural head master is in reality much harder, as he has to do more actual teaching and is not supported by such capable assistants, nor, to compensate him for his present position, has he the hope of promotion to any of the highly paid posts, to which as a rule the assistant teachers from towns are preferred." Then again the report says: "the belief that this difference in salary is compensated by any cheapness of living in the country is not borne out by facts." We agree that the rural school needs teachers with at least as good qualifications as those demanded from teachers in urban schools. To ensure this, salaries must be equalized; and teachers intending to work in rural districts must have a special training based on work on the land.

It is now difficult to get teachers for rural schools who have themselves been brought up in the country. The circumstances work round in a vicious circle.

Pupils from the country are less likely to come into the town secondary schools than pupils already living in the town where the secondary school is situated. On the whole, the country children are more backward than the town children, owing to less efficient teaching, to more frequent absence from school and interruption to work, and owing to the want of intellectual stimulus in their surroundings; therefore they are less likely to gain scholarships or free places. Sometimes, when a scholarship is won, there is a difficulty in sending the child into the town. The remedy should be first to establish a separate scholarship examination for children from rural schools, and, secondly, to give such children, if they desire it, an opportunity of an education that will especially fit them to become teachers in rural day schools and in rural evening schools.

THE General Education Committee of the Wilts County Council

**Powers of
Boards
of Guardians.**

have circularized Boards of Guardians to find out if they are willing to co-operate with the Committee in giving dental treatment to children in schools. The proposal is that all the schools within the area of a Board of Guardians that is willing to co-operate should be inspected at one time; that the Care Committee should take from the log-book a list of children requiring dental treatment, and, if after two months they find that no treatment has been given, they should inquire if the neglect arises from poverty; in which case the children will be referred to the Guardians. The replies of the various Boards of Guardians to the Committee's circular are curiously varied. Some Boards are sympathetic and some not. Some say they have no power and some agree to give the treatment. Probably the Local Government will be asked to give a ruling in the matter.

THE Municipal Council of Paris have invited five hundred children

**Youthful
Ambassadors.**

from the elementary schools of London to visit Paris for the Whitsuntide holidays. The Education Committee recommend the Council to accept the invitation. The children will be carefully chosen, and they will be in the charge of a number of teachers and officials. Both before and after the visit there will be in London five hundred centres of interest in France and the French people. Such a visit will do much to remove insular narrowness and suspicion, and to encourage the spread of friendly ideas in connexion with our neighbours over the water. A few years ago the possi-

bility of such a visit would have been scouted. Before many years have past we may hope for a similar scheme in reference to Berlin.

At a meeting of the Notts Education Committee, as we learn from an account in a local newspaper, attention was drawn to the comparatively small amount of time given during the elementary school course to instruction in domestic subjects. It was pointed out that a consideration of the time-tables showed that during six years of school life a girl would have instruction in cookery for 150 hours, while she would give 320 hours to singing and 600 to composition. There is something in the contention, though we could not subscribe unreservedly to the doctrine that the number of hours given to a subject must be in ratio with its usefulness. There are many other considerations. But we are convinced that more time should be given to domestic subjects, and we are sure that nothing but the greater cost of "practical subjects" prevents them from taking a larger share of the time-table.

SCIENCE NOTES.

THOSE who realize how largely the work of Sir Joseph Thomson has contributed, not only to the advancement of knowledge, but also to the reputation of this country for producing original investigators of the highest rank, must welcome the announcement that His Majesty has conferred upon him the Order of Merit.

CAPTAIN AMUNDSEN's brilliant expedition had a triple success. He attained the South Pole on December 14, and found, as Shackleton's observations had led us to expect, that it is located in a vast plain, alike in all directions, mile after mile. In his outward journey he covered twenty-five kilometres per day, and averaged thirty-six kilometres per day on the return. For the first time a landing was made on King Edward VII Land, to the east of the Great Ice Barrier, and the party under Lieutenant Prestud made geological collections which may confirm the view that this land is continuous with South Victoria Land. The third achievement of first-rate order was the discovery of the end of Ross's Great Ice Barrier. The altitude of the Polar plain above sea level is about 10,000 feet, and the temperature on December 14 was fifty Fahrenheit degrees below freezing point.

GREAT interest is taken by children in stories of exploration, and we feel that those teachers are wise who make large use of the famous voyages of discovery in geographical teaching. A large amount of invaluable material can be obtained from recent Polar expeditions, which will give vividness to the work of the classes in physics where the phenomena of meteorology, the effects of temperature changes upon water, the distribution of magnetic curves, &c., are being considered. Nor will wise teachers neglect the powerful human interest of the heroic struggles of the men who have braved peril after peril in their ventures into the unknown. Perhaps the moral effect of such lessons is not the least valuable of their results, as the narrative of pluck and endurance needs no sermonizing. The study of the too-neglected subject of mathematical geography is especially helped by the Polar triumphs of Peary and Amundsen. How did they know when they had reached their goals? Very few, we find, know the simple answer to this question. At the Pole the sun's altitude remains practically constant for twenty-four hours. On December 15, in fine weather, Amundsen took a series of observations lasting from 6 a.m. to 7 p.m., from which the latitude $89^{\circ} 55'$ was deduced. Next day he took his men nine kilometres farther south, and four of them took observations every hour of the twenty-four. The instruments used were the sextant and artificial horizon.

BIOLOGY has been making great advances during the last twelve months, and in no department is activity more striking at present than in the study of problems of heredity. The first International Eugenics Congress is to be held at the University of London during the last week in July, and the program is provisionally arranged under the following heads:—(a) Biological Research, (b) Sociological and Historical Research, (c) Legislation and Social Customs. These, of course, are to be dealt with from their bearing upon eugenics.

Another sign of the vigorous pursuit of genetics is the founding at Cambridge of the Balfour Professorship. The new chair is associated with the memory of F. M. Balfour, the first and only holder of the Cambridge Professorship of Comparative Embryology—a science which its professor may be said to have created.

EMIGRATION to Canada, Australia, and New Zealand is proceeding as fast as steamship accommodation permits. Have any of our exponents of Nature Study tried the experiment of sowing seeds of wheat, maize, and other cereals collected from the overseas dominions? Some years ago we tried simultaneous sowing of wheat-seeds from Canada and England in damp sawdust on a window-ledge in London. The boys were much interested in thus solving the question of the cause of the quick growth of Canadian corn. Is it due to climate or to pedigree? We did not have to wait long for the answer.

As science teachers, we desire to see the study of educational theory encouraged, not only among our literary colleagues, but to an equal extent among those who are undertaking the portions of the curriculum in which we are specially interested. It would be a great mistake if the Arts degree were to be the sole approach to a diploma or degree in education, yet there is some possibility of the mistake being made. The London University has hitherto allowed bachelors of science to present themselves for the education diploma, and we would urge that this avenue be kept open. We may suggest that a history of science teaching is still to be written, and feel strongly that an adequate treatment of this important branch of pedagogy would be of much value. Perhaps some aspirant for the "Higher Diploma" might find in this task a theme not unworthy of his efforts and the imprimatur of the University?

THE TEACHING OF CHEMISTRY.

THE teaching of chemistry in schools was revolutionized some years ago by the introduction of the heuristic method. Excellent as this method undoubtedly is, it is the object of the present paper to inquire seriously if it has not, like many other innovations, been carried to such extremes as to be detrimental in many cases to the teaching of the science in a proper manner.

In the first place, the heuristic method requires that the average boy shall be able to reason in an intelligent and logical manner, and thereby to draw conclusions from his experiments which, if not the correct ones, will at least have some reasonable appearance of being so.

It will probably be conceded by most science masters that at least 50 per cent. of the boys who are just starting chemistry have no reasoning and deductive powers at all, and that of the remaining 50 per cent. two out of every three will draw any conclusion but the correct one. In fact, they hardly know, in many cases, the distinction between an observation and a deduction. If a boy heats, say, some copper and finds that thereby it increases in weight, and is asked what conclusion he would draw from his experiment, his answer will most likely be, "Well, I should say that there is an increase in weight."

In spite of this lack of reasoning power, it will nevertheless be conceded by most that no system is so effective in developing this power as the heuristic method of teaching science *when that method is properly used*.

The fatal objection to purely heuristic methods as applied to chemistry seems to be that far more time must be given to this subject than *can* be given, or even expected, by the most enthusiastic science master. Our curricula are full enough as it is, and a boy's time is so occupied that, when starting chemistry, it is not usual for a class to devote more than one and a half or two hours a week to it—plus, say, half an hour's homework.

It is here, it would seem, that a grave mistake is being made. If the method used is purely heuristic, it is an almost general practice to allow no text-book to the class, but to

make every boy make his note-book his text-book. Now it will be generally conceded that a certain amount of the time must be devoted to lectures and lecture experiments. To follow out a subject to its logical conclusion there are some experiments which cannot be done by the class. The consequence is that beginners in chemistry spend a large proportion of their limited time in getting down into their note-books a more or less verbatim report of the lecture and in sketching the lecture apparatus.

It would seem that this mistake can be remedied by allowing beginners to use a chemistry text-book drawn up on heuristic lines, but in which, nevertheless, there is a sufficient explanation of every experiment not only to enable the boy to draw conclusions, but to put him on the track of the right conclusions. A boy's note-book ought not to be, as it often is, composed partly of lecture experiments, as the result of this is simply that much valuable time is wasted out of the limited amount at his disposal. In other words, by the judicious use of a text-book far more work can be got through in the year and got through far more thoroughly than without one.

Certainly many science teachers will scout the idea that a text-book is at all necessary or even desirable. Yet even these will admit perhaps—indeed, how can they help but admit?—that the tendency for late years has been for boys to get through less and less chemistry in their first year, till in some cases the syllabus has been reduced to an absolutely ridiculous minimum.

It is a specious argument, no doubt, to say that, if they do only get through very little, yet they know that little well, or that the average marks of the class are better with the small syllabus. So they surely should be! What it means, in many cases, is that the standard of the class is being brought down to the level of the most backward boys. It is impossible, as all schoolmasters will agree, to teach some boys more than the very minimum necessary to fill up their time. It is absurd, on the other hand, to try to keep the whole class up to the best boys in it. The happy mean must somehow be struck. How can this be done?

Looking at the average first year chemistry text-book drawn up on purely heuristic principles (in which simply directions for the boy's own experiments and nothing else are given) it is often seen that the scheme chosen is one of the most uninteresting possible. Probably not much besides combustion is gone into, but the main objection is that this is gone into too fully; in fact, the boy gets wearied of Bunsen flames and candle flames. A certain amount of variety is absolutely necessary to keep up a boy's interest.

Surely of all subjects chemistry is able to furnish this variety and interest, and at the same time to cover sufficient ground to enable him, if he does decide to take up science later on, to proceed to the necessary examinations without having to spend time on his elementary chemistry that could be better employed on more advanced work.

For example, let us take quite a common first year's chemistry syllabus. Starting with chemical and physical change, we reach combustion, and there we stick for weeks, entering into such detail as the structure of the flame of a candle, of coal gas, and the Bunsen flame, the reciprocal nature of combustion, the products of combustion of the candle, and the composition of its wax. (All this would be much better understood in the second year.) We then find solution studied and we get comparatively deeply into the various conditions of solution and crystallization, solubility curves are drawn (and oh! what weird shapes they come out!), and this portion is wound up by the measurement of the angles of various crystals and showing that they have characteristic angles. Then, perhaps, the idea of elements is brought in, which idea should really have been brought in at the beginning. The above constitutes a year's work.

Such a syllabus undoubtedly brings in questions which not only cannot be settled by such experiments as the boys can perform themselves, but which are actually very involved indeed—e.g., cause of luminosity in a candle flame.

Now nothing is more certain than that a syllabus can

easily be made quite as elementary [*sic*], far more interesting and easy to grasp, and yet covering far more ground and more useful ground. But such a syllabus will require the use of a text-book, and a text-book in which not only experiments for the class are given and questions asked which will lead them right, but in which lecture experiments are given, with sketch of apparatus, and in which the full explanation and confirmation of the students' own experiments are arrived at. The sort of scheme suitable should be mainly composed of reactions typical of the analysis and synthesis of simple and well known compounds such as oxides, water, common salt, and hydrochloric acid, leading up to the action of an acid on a base and the composition of salts.

Then marble may be studied, bringing in many interesting yet simple reactions, all easy to follow. Sulphur (the element only) might come next, followed by sal-ammoniac, leading to ammonia, its composition, and then, via ammonium nitrate, proceeding to laughing gas if time permits.

The contention of this paper is that time *will* permit with three hours per week for chemistry, if a text-book is used suited to the course intended, and in which are fully set out all those lecture notes that would otherwise have to be laboriously copied out. A lecture illustrating and extending the last experiment done by the class is more easily grasped, and is far more interesting, if it does not have to be written down off the blackboard, but can be followed step by step in their books. By employing the whole, instead of about a third, of the lecture hour in this way, and by making it as chatty as is consistent with proper discipline, surprisingly good results will be obtained; and the ground covered in the year, and covered properly, will probably surprise those teachers who have hitherto used no text-book at all.

It ought to be possible for a boy who takes the Junior and Senior Locals (at an average age of, say, fourteen and fifteen respectively) to reach the required standard in chemistry as easily as he can in other subjects. Yet this is not done. He is at this age nowhere near such a standard. And this is, in great measure, due to the fact that, owing to the abuse of the heuristic method, his syllabus has been cut down to such small limits. Partly, too, no doubt, to the fact that, while he has eight hours a week at Latin, two hours a week is thought enough for chemistry.

It is quite possible for a boy of average normal ability to get up to the standard of the Higher Certificate in three, or at the outside four, years at chemistry. If he starts chemistry at thirteen, he ought easily to be up to scholarship standard by the time he is eighteen. This, however, can only be done by covering a reasonable amount of ground in the first two years, and this again cannot be done on purely heuristic lines.

A text-book covering such a syllabus as previously indicated does not cover the ground too rapidly, for it enters into nothing too deeply. The objection that many will raise is that the use of a text-book may lead to neglect of the note-book. Now, if this happens, it is the fault not of the text-book, but of the teacher himself. It is his part to see that the note-books are properly kept, and if he fails in this it is a poor excuse for banning a text-book.

It will probably be found the best plan to make the boys write up their own experiments as they go along in a rough note-book. The master should see that the account of the experiment and the conclusions therefrom are entered before the laboratory is left. The homework should consist in writing this out in the best note-books. Then at the next lecture, time which would otherwise be spent in copying out the lecture from the blackboard can be spent in amplifying such an account and in making necessary corrections.

To sum up, it is the writer's firm conviction that the heuristic method can be best employed to teach chemistry, not by itself, but in conjunction with a suitably modified form of the older method. By such a judicious combination it is his constant experience that the most ground is covered, the work is most thoroughly known, and the greatest interest

is maintained in the work. Last, and chiefest, the training in deduction is quite as thorough, if not more so, than that got by the slow, purely heuristic method.

G. F. H.

FOLK DANCING FOR SCHOOLS.

THOMAS MORLEY (1597), in his "Plaine and Easy Introduction to Practical Music" edition of 1771, says of dance music: "There is also another kind more light than this alluding to the Villanelle, rustic song-tunes, previously mentioned, which they term Ballets or daunces; and are songs which, being sung to a ditty, may likewise be danced." Further on he comes back to the mention of dances, as connected with measure in musical composition, and distinguishes "the Volte, rising and leaping, the Courant, travising and running, in which measure also our country dance is made though it be danced after another forme than any of the former. All these be made in straines, either two or three, as shall seem best to the maker; but the Courant hath twice so much in a strain as the English country-dance." Then he goes on to discriminate "other kinds of daunces (as Hornepypes, Jiggs, and infinite more)."

Morley corrects presumption in musicians, saying that he "dare boldly affirme, that looke which is hee who thinketh himselfe the best descanner of all his neighbours, injoyne him to make but a Scottish Jygge, he will grossly erre in the true nature and qualitie of it."

A wish has been expressed to gain light upon the folk dancers' ideal which has conserved this store (in England) through the ages. One can do little but contribute glimpses of the history, bursting into notice at the point where Playford publishes his book in 1650. The survivals in "The Dancing Master" from earlier days cannot be traced at present. "Trenchmore," doubtless, "Selling's Round," and "Dargason," in some form and under some name, were known, but were they written down? The current flows on darkling, as Cecil Sharp shows, for seventy years in seventeen successive editions, light thrown upon it, as it were through a window, each time it reissues from the press, until 1728, when it appeared in Three Parts (oh, how altered!), and then no more till 1911.

In 1710, "Chorography, or the Art of Teaching Country Dances," had appeared, adapted from the French of Neuillet. We suspect that meant "the Art of Inventing." "Chorography," after all, means merely writing it down. In 1744, in the Bodleian, lies a new "Country-Dance Manual," oblong quarto, with two hundred tunes, and full directions for dancing. A charming frontispiece shows the ballroom, full of boops and coat-skirts, also a musicians' gallery with "violins and German flutes"—as we suppose it existed "at Bath, Tunbridge Wells, and at Court." Among the two hundred tunes are few recognizable by name, but the directions show the dances (although the Rounds are gone) still are "Squares for Eight" as well as "Longways." "Nonesuch" is there still, and "Rakes of Mellow" represents the well known morris dance of the present revival.

Now we come in sight of a possible influence. Bath and Tunbridge Wells were health resorts. Is it possible the doctors (sensible people even then) had their say over the respective merits of different dances, as hygienic exercises? Here is a "topical" research: The mention of Tunbridge carries us back to the Stuarts, that is, if we are readers of Count Grammont's "Memoirs" (1662-4). That outspoken Frenchman came over to England soon after the Restoration, and stayed with Charles II, fell in love with Miss Hamilton, and criticized the Court Balls, or "assemblies," in the friendliest way. There the dances, says Grammont, were "not very well executed, so long as they danced only slow dances, and yet there were as good dancers and as beautiful women in

this assembly as were to be found in the whole world, but as their number was not great, they left the French and went to country dances," which, it is noticed later, were "despised" by M. Brisacier, who seems to be himself disdained by M. le Comte. The country dancers then were *not* "French," and were already at Court in 1662. Samuel Pepys says likewise; and meets John Playford, who alone could tell us all we want to know.

The medical world is not often adverted to in these memoirs; but the resort of the Queen's Court to Tunbridge gives fair occasion for description of health and natural joy, and in come the doctors! In 1663, it seems, the Court went down to Tunbridge for two months—"the place in all Europe the most rural and simple, and yet at the same time the most entertaining and agreeable." He might be describing our little Stratford-on-Avon! "The company are accommodated with lodgings in little clean and convenient habitations that lie straggling and separate from one another a mile and a half around the Wells, where they meet in the morning. . . . As soon as the evening comes every one quits his little palace to assemble upon the bowling green, where, in the open air, those who choose dance upon the turf, more soft and smooth than the finest carpet in the world."

Besides this evening frolic on the green "there was dancing every day at the Queen's apartments because the physicians recommended it, and no person thought it amiss; for even those who cared least for it chose that exercise rather than walking to digest the waters." That these were country dances is clearly shown in the next pages. Lady Muskerrey, who was kept from Court, "did not cease, in her imagination, to dance over at Summer Hill all the country dances which she thought had been danced at Tunbridge." How characteristic this is of Revival experience pupils of the new movement will readily acknowledge.

Competent opinion at the present day is agreed that even the severe morris—the men's morris—does, to the normal sound child, more good than harm. It should be danced with due care to allow pauses for rest, and (most of all important, says Dr. Maude) it should be danced in good air—either the windows wide open or out of doors. To the latter we hope to return in the coming season. And the Playford dances, as reproduced in Mr. Sharp's books, are faultless exercises, as crowds of teachers now will testify. There are, as Lord Bacon said of books, many kinds—some to be chewed, some digested, some swallowed. Of this latter kind we recommend "Jamaica" on a cold spring evening before bedtime; but it requires numbers, whereas a "Square for Four" can be danced (almost) in a front parlour. You can walk it "w.s." or you can run it "r.s."; and "sks." (or skipping step) you can, if old and stiff, ignore altogether. Still, first, on every opportunity, go and see it. The address of the English Folk Dance Society is 42 Bloomsbury Square, W.C.

C. S. S.

THE PHYSICAL TRAINING COLLEGE AT DARTFORD HEATH.—The important extensions which have taken place in the Physical Training College at Dartford Heath, under the guidance of Mme Bergman Österberg, deserve more than a word of mention. When the College, the first of its kind in England, removed from Hampstead to Dartford Heath in 1895, the building, with its beautiful grounds of 14 acres, afforded accommodation for thirty students. Within the last few years have been added a commodious gymnasium with the most recent Swedish fittings, connected with the main building by a covered way, and an extensive wing of fifty rooms, with a handsome dining hall on the ground floor. The last addition, completed only a few weeks ago, is a well equipped laboratory for chemical and biological studies, being an exact copy of the building erected for the use of the students of Girton and Newnham at the Balfour Laboratories, Cambridge. Below it is a lecture hall and study. The accommodation is now sufficient for seventy students, and so thoroughly has a correct theory of physical education penetrated the schools, that the demand for well trained teachers is constant, and the College is invariably full.

GRAMMAR AND STYLE.

By WILLIAM PLATT.

IN my schooldays grammar was still taught in the formal manner, and regarded as a subject of great importance. It was considered that correct English could not be written or spoken unless a certain number of dry grammatical rules were committed to memory; and, *vice versa*, if after a grammar lesson an error in speech were made, we were reprov'd in much the same spirit as was shown by the "Femme Savante" of Molière, who was surprised that her servant should fall down after having learnt the laws of gravitation.

The revolution which has taken place in the position held by grammar as a formal subject to-day is well illustrated by the fact that in the Joint Matriculation of the Northern Universities, the English examination is divided into two alternative papers, and may be taken either with grammar or with literature questions in place of the grammar. As an essay is rightly demanded in either case, it may not be too much to hope that at no very distant date the essay may be taken as a gauge of the candidate's ability to express himself in correct English, and some knowledge of our glorious literature may be regarded as being, without alternative, a more necessary qualification than the power, for instance, of dividing adjectives into proper, descriptive, quantitative, numeral, demonstrative, interrogative, distributive, descriptive comparative, descriptive superlative, and I know not what else.

That English is a neglected subject I should be one of the first to maintain, and to deplore. Not only have I met more than one Oxford man who has made a boast of the fact that he has but little acquaintance with the literature of his own country; I have also had the misfortune to examine papers upon a technical subject by students who had all previously passed their Intermediate, and I sent forward a special note upon the fact that too large a proportion of them could not express themselves in clear, grammatical, or properly punctuated English. To make it plain that I was not asking too high a standard on that occasion, I may add that no merchant's clerk would be allowed to express himself as badly. Therefore, if I thought that the retention of grammar as a formal subject would raise the standard of terse, clear or vigorous English, I would hold very different views from those which I wish to outline here.

My complaint against grammarians is that they have divorced grammar from style, and thereby made their subject barren. And to those who in answer would tell me that grammar and style are two quite different things, I would only retort that that is just the reason why the teaching of grammar has been in the main such a waste of valuable time. To divide adjectives into a series of classes, each class bearing a formidable Latin-English name, would seem to me under any circumstances a singularly useless proceeding; but to do so while leaving out all mention of the adjective's real stylistic value and qualities is a crying waste of opportunity. At a time when one or two slangy adjectives tend to displace all others in the vocabulary of our youths, it is surely of moment to teach the value of the right one found, and to show how much of the emotional value of the sentence depends upon it.

But not only are grammars remarkable for omitting this side as if it had no part in their subject; they are also, from long-standing habit, guilty of a treatment which hinders the young mind from grasping the realities of style, and this because their analysis is formal and never in the vital sense stylistic. In quoting a few examples to make my points clear I will use Mr. Nesfield's "Grammar," as published by Messrs. Macmillan, but let me state in advance that I am far from saying that, as grammars go, this is a bad one; in fact on the contrary my case is strengthened by the admission that I believe that on its own lines it is quite an excellent book, and, as long as our ideals of what a grammar should be remain unaltered, this one is at least as good as any other.

But let us suppose that a teacher has in him some sense of

style and an enthusiasm for good literature, and that, whilst doing his utmost to communicate some of this to his class, he is asked to teach them on the lines of Nesfield's Grammar. On page 92 he will come upon the following:—

Simple Sentence:—A simple sentence is one that has only one finite verb, expressed or understood. For example: "The merchant, having much property to sell, caused all his goods to be conveyed on camels, there being no railway in that country." In this sentence there are five different verbs . . . but only one—viz. *caused*—is finite. The sentence is therefore simple. . . .

Complex Sentence:—A complex sentence consists of a principal clause with one or more subordinate or dependent clauses. For example: "A merchant, who had much property to sell, caused all his goods to be conveyed on camels, as there was no railway in that country." The two sentences mean precisely the same thing, and both have a finite verb in common, "*caused*"; but in other respects they are very different.

And so on, and so on. Nearly two whole pages are wasted in a barren discussion upon the difference between Tweedle-dum and Tweedledee. Two sentences which are, from the one important point of view of style, equally good, equally simple, and equally complex, are made out to be "very different" on the basis of a grammatical subtlety which has absolutely no value, and with which the student's mind should certainly not be burdened. And the teacher who is striving to impart a love for simple, vigorous English will certainly be hampered if asked to teach that the word "simple" may be applied to any sentence, however involved, which has only one finite verb, while the adjective "complex" must be bestowed upon every sentence, however clear, which has a subordinate clause.

In this case, grammar is not only taking up time that would be better spent in studying what are the qualities of style, but, even worse, it is actively engaged upon classifying sentences upon a merely formal method which the stylist is bound to find deplorable.

To take another instance: On page 105 we are asked to consider Degrees of Subordination, and the following example is given:—

(1) The unfortunate man had not long lain in the cavern (*a*) before he heard a dreadful noise, (*b*) which seemed to be the roar of some wild beast.

In sentence (1) the clause "before he heard a dreadful noise" is an adverb-clause qualifying the finite verb "had lain," which occurs in the principal clause; it is therefore subordinate to the principal clause in the first degree. In the same sentence the clause "which seemed to be the roar of some wild beast" is an adjective-clause qualifying the noun "noise" . . . and is therefore subordinate to the principal clause in the second degree.

I have merely given the gist, and had not the heart to copy out the whole of the tedious and singularly worthless argument. What I do want to point out is that whereas to the grammarian (1) is the principal clause, (*a*) is subordinate and (*b*) still more subordinate, no stylist would dream of making such a purely formal distinction, and no reader of the least intelligence could fail, instinctively, to read the passage if reading aloud, in the way I am about to indicate. In actual fact, then (1), far from being the principal portion of the sentence, is merely introductory; (*a*), far from being subordinate to it, begins to introduce the real motive; while (*b*), far from being still more subordinate, provides the real climax and motive of the whole sentence.

Of course the grammarian's answer will be that he is not using the words "principal" and "subordinate" in their logical meaning, but merely as terms of grammar. That part of the sentence which bears the chief weight may thus, by grammatical jugglery, be termed doubly, or even trebly, subordinate. This is precisely what makes grammar seem so worthless in my eyes.

But one argument always remains. At the last ditch, the grammarian can always turn round and claim that, at any rate, his system of analysis does teach the student to think over his sentences. Does it? And if it does, does it teach him to think over them in any way that possesses a semblance of value? Let us turn to the book again and see if we can find in it any answer to this final question.

My copy is dated 1910, and an interesting note tells that this is the fourteenth reprint since the original edition; yet I find on page 11, among the examples, the amazing statement that "the earth goes round the sun in one day and one night"! No doubt it is good grammar, but the mere fact that this amazing statement could be reprinted, unnoticed, fourteen times, may add a little strength to a conviction long since forced upon me, which is that the writer who thinks too much about grammar will probably forget far more important things, and that both the thing which he says, and the way in which he says it, will only too assuredly suffer.

THE TEACHING OF NATURE STUDY. I.—LOCAL DIFFICULTIES.

By A. R. HORWOOD.

THE excellence of Nature study as a *method*, as distinguished from its teaching merely as a *subject*, though widely recognized, has not been grasped by the majority of schoolmasters on account of the difficulties that lie in the way of most of those who are sincerely impressed with the value of the observational method as a stepping-stone to the larger education of the young mind.

In a few words I will attempt to outline some of the more universally felt difficulties, and will suggest some remedies. The point of view I adopt, being the one on which I can speak with some knowledge and authority, is the connexion between museums and Nature-study teaching in the elementary and secondary schools. As the same difficulties do not apply to our great public schools, they are not here especially included.

First of all, some misconceptions as to the character of museums (to-day) should be cleared away. In the old days, fifty years ago, a museum was either regarded as a sort of Temple of Minerva, unapproached except by the cultured, or by cranks (of these not a few), or it was the now obsolete mausoleum or receiving hall of all the useless rubbish of the taxidermic or relic type that no one else, not even the old curiosity shop, would be bothered with. Then museums or their curators had no plan, no ideal, and consequently exhibits were uninteresting, and, as a rule, rather repelled than compelled attention.

As the root meaning of museum is study (while that of school is leisure! not so, we think, with most), so it has now been recognized that a museum can be made a means for studying abstract principles by the examination of concrete examples, and since the application of the examples to those principles is so important, so museums aim at co-ordinating material according to a certain well defined plan.

Indeed, a museum is to be regarded now as but one part of a great system of education by means of which the individual can proceed from the most primitive school to higher and higher stages until the University career, if desired, be attained. And, by the way, the technical or art school, evening school, the museum as here, can all be made use of with advantage by the boy or girl who is guided by a well defined plan to attain some object or reach some goal sketched out by an intelligent master or parent.

The school, then, should lead up to the museum and art gallery, school of art, &c. These together should be within the scope of every boy or girl, with as little restriction as possible, or call for parental outlay, commensurate with means. But responsibility and independence must not be checked by universal charity which sterilizes effort and extinguishes genius.

In most towns there is a necessity for the recognition of the subject of Nature study, or rather as a method. This would, in most cases, be facilitated by the appointment of a Nature-study lecturer, a borough or county organizer or inspector. Wherever there is a county lecturer, there is stimulus given and a greater enthusiasm and keenness for the subject. Moreover, the teachers read it up. But there is a great need for a preliminary knowledge on the part of teachers. Hardly

10 per cent. of teachers take any trouble to learn the subject or its possibilities. There is, indeed, an opportunity for systematic teaching. This present position is highly unsatisfactory. The subject is not used as it should be, moreover, as a training in the development of the powers of reasoning. Usually it is an extra. And the teaching of it is largely desultory, amateurish, often *nil*. But there is a desire for Nature knowledge—this is growing fast. During the last ten years the utilization of museums for this purpose has increased enormously.

In some cases museums have silently, as at Leicester, been undertaking to cater for schools, but no appeal has been made in numbers of cases for this help. If museums are willing (as they are) to co-operate, surely this should in itself be an impetus. Indeed, in spite of the lack of (official) encouragement given to the teaching of Nature study, many teachers have gone to extraordinary trouble and pains to advance pupils in it. And, if museums are co-operated with, they can be the means of affording the very material needed for teaching purposes.

It is necessary to extend the scope of the old science syllabus. This is now too cut and-dried for the present need. More freedom should be allowed the teacher to develop on individual lines suited to particular cases. Unless this opportunity for exhibiting initiative is given, interest is sacrificed. Then, again, the curtailment of the numbers of classes is absolutely necessary. The reduction of classes, indeed, is a national necessity, affecting all subjects. Six, not sixty, is the number that ought to be brought to a museum to profit by the visit, or six to ten at most. There is, moreover, need for detailed organization of the year's visits, subject to be taken, how it is illustrated in a museum, information which should come from the last itself. But it is seldom or never sought. As to the *modus operandi* for revision of the scheme, application could be made to the museum for information as to the sort of syllabus suited to the subject, stating available material and proposed future exhibits; and afterwards, on inquiry as to the material, illustrating special branches of subjects or topics.

Then as to circulation. If desired, a type set of objects or an index collection could be produced as a travelling museum, a method already widely adopted. As regards field-work, museums can render much assistance. Excursions to the field could be suggested in further illustration of subjects, and advice given as to spots to be visited, scenery, physical features, geological sections, botanical associations, stations, types of florula (marsh, heath, &c.).

In the present circumstances there is a risk of swamping the minds of children in conducting them in bewildering fashion through a large museum with many objects in association. A museum is indeed a mosaic, with too many facets for the small human eye, till the brain is aroused. It is better at first to deal with life histories. The value of current life cannot be overestimated. The plant-table, or the vivarium, can be a source of much educative work. Then most museums have libraries of a special nature, which are usually accessible to adults known to the staff—the teachers can use them.

Lastly, there may be reciprocal assistance by means of the furnishing of specimens, e.g., for the plant-table, or geological or other specimens by advanced students. And teachers should learn to push on and advance such students and utilize them. They may be employed in making systematic botanical and other surveys, which will lead to emulation and interest.

A word should be said as to the importance of making pot or other cultures, forming school gardens, recording observations on a map or in a calendar, and, in general, of encouraging good methods. If work is carried out on these lines, teachers can be sure of some success. But, in spite of the facilities for it that exist, it is not being done. This is because it is not officially encouraged. Can this not be remedied? Unity is strength. It is only by the formation of individual determinations in each centre to carry this out that a universal agreement can be reached. When this has been accomplished, the State ship will move, and quickly, but not till then.

JOTTINGS.

MISS LILLIAS HAMILTON, Warden of the Studley Agricultural and Horticultural College for Women, proposes to start a large co-operative farm on which qualified students of the College could be employed as forewomen and gain experience in management, the lack of which has hitherto prevented her students from obtaining higher posts. As it is, she states that for all the 37 students who left the College last summer employment has been found at initial salaries ranging from £30 to £60 a year, with a cottage. The full scheme would include the purchase of land to be let or sold in small tenures to women. There can be no doubt of the capacity of women for such occupations as market gardening, fruit growing, poultry farming, and we hope the scheme will receive public support.

In reference to the question raised in the House of Commons by Lord Wolmer, whether Mr. McKenna was a member of the Church of England, we may recall the case of Prof. Huxley. Invited to join the governing body of Eton, he declined, on the ground that he was not, as required by the statutes, a member of the Church of England. The opinion of highest legal authorities was taken, and they pronounced that any British subject who did not belong to any other denomination was in the eye of the law a member of the Church of England. Prof. Huxley's scruples were satisfied, and he consented to be nominated.

THE Incorporated Association of Assistant Masters will hold a General Meeting at Mercers' School, Holborn, on Saturday, April 6. The Chairman, Mr. S. E. Winbolt, will deliver his address at 3 p.m. Mr. G. T. Hankin will propose a resolution in support of the proposed Secondary and University Teachers' Provident Society, and a discussion of the National Insurance Act as it affects teachers will follow.

MR. PEASE's printed answer to Mr. Charles Duncan's question on the Junior Examinations of the Board of Education is not illuminative. We learn what we knew before: that as a rule only Oxford and Cambridge men are appointed; but we are not informed how many of the 37 in the tabular statement possessed "the desirable but not essential qualification, some knowledge of the

theory and practice of teaching or of the administration of some branch of education." To judge by our personal knowledge, they would be fewer than the non-University men. We have no desire to see these posts thrown open to competition, but we like still less to see them become a sort of All Souls Fellowship.

FROM an article by Mr. G. P. Gouch in the *Moral Education League Quarterly* we cull a happy dictum: "History is ethics teaching by example, and a wise warning to teachers of young children. History must begin with biography, but the teacher must beware of 'the cult of the superman,' of Carlyle's hero-worship."

IN a volume elsewhere reviewed we read that Lord Tennyson was not pleased when told that his poems were used as a textbook at Harrow: "It will make the Harrow boys hate me." We are reminded of a story that Mr. Moss, of Shrewsbury, used to tell. He announced one morning to his House at breakfast that Tennyson was dead. This sad intelligence provoked from one small boy the strange remark, "I wish it had been old Milton!" The explanation is that at Shrewsbury "Paradise Lost" was the standard book from which to set "lines."

THE University of Oxford has issued a preliminary announcement of the Sixth Biennial Vacation Course in Geography. The date is fixed for August 6-23. Each day there will be two lectures and one seminar or excursion. The number of students will be limited, and names should be sent without delay to the Vacation Course Secretary, School of Geography, Oxford. The fee for the whole course is £3. 3s.

MR. LYTTTELTON must be wishing that there were a close time for head masters. The *Humanitarian* will give him no peace till he has put a stop to the Eton beagles. In the March number it publishes a correspondence between Mr. Lyttelton and Mrs. Penn-Gaskell, in which the lady scores at least one point. Mr. Lyttelton asserted that "there is no evidence of a doe-hare being killed in an unfit condition since beagling began here." Mrs. Penn-Gaskell reminds him that in a previous correspondence he had owned up to one such case.

DUSTLESS SCHOOLS

For the Anhydrous, economic and effective LAYING of DUST and DIRT not only during each Sweeping, but also throughout all the intervening periods — which is of greater hygienic importance — the Unequalled ODOURLESS, or POWERFUL GERMICIDAL

USE

FLORIGÈNE

(A Registered Name suggested by FLOOR-HYGIENE)

On all School, Laboratory, &c., Floors and Linoleums of every description
In Schools — **VERY EARLY** in **EASTER VACATION** for best results.

NOT MORE THAN THREE TIMES A YEAR, as each application lays the dust and dirt for two to twelve months, according to wear. It costs little, and is easily applied. Not sticky—the dust, &c., absorb the "Florigène" from the impregnated floors and become "weighted." The ordinary daily dry sweeping alone required to clean during each term, without sprinkling of any kind.

"Florigène" is an aid to the prevention of throat and other diseases, and has been awarded the BRONZE MEDAL of the ROYAL SANITARY INSTITUTE.

Two well-known SCHOOL MEDICAL OFFICERS have jointly reported on the advantages of "Florigène"—as the result of bacteriological experiments in four departments—as follows:—

1. Economy of labour in cleaning the room.

2. Prevention of the rising of dust once deposited; hence a healthier atmosphere for breathing.

They also favour its more general adoption, especially in rooms where drill is carried out.

"Florigène" is also strongly recommended by many other high authorities.

"Florigène" has been used for many years on the floors of The Royal Naval Colleges, H.M. Science and Art and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, Libraries, Museums, Offices, &c., throughout the United Kingdom and Colonies with approval.

BOOKS BOUGHT AT GOOD PRICES.

A CORRESPONDENT of the *Westminster Gazette* gives an instructive account of the establishment of a dental clinic for a village school in Devonshire. The chief fact to note is that from the first it has been welcomed, and in part supported, by the parents. The initial expenses were £36, and the cost of maintenance for the first six months, including dentist's fee and toothbrushes, was £34; but the promoters calculate that the work can be carried on permanently for £30 a year, or 7s. 6d. per child. We believe a Government grant of 2s. 6d. would soon make school dental clinics universal, and the sole fact that defective teeth is the commonest cause for rejection of army recruits should be a sufficient argument in its favour.

MISS MARGARET SHAXBY, formerly a student of Girton College, Cambridge, succeeds Miss Alice Zimmern as Secretary at the London Centre of the Cambridge Higher Local Examination (for men and women candidates). In 1892, Miss Shaxby took Third Class Honours in the Classical Tripos, and subsequently graduated as M.A. of Trinity College, Dublin.

THE commemoration of Miss Emily Davies's work on behalf of women during the course of fifty years was made the occasion of a pleasing little ceremony which, by Miss Davies's wish, took place privately at her own house. Miss E. E. C. Jones, of Girton College, presented to Miss Davies a cheque for 700 guineas, to be applied as she thought fit, together with a leather-bound address containing names of the 1,344 subscribers, and bearing the inscription, "E. D., 1862-1912." The fund was a very representative one, raised by the great bodies of women whose present position and power form a living and a public memorial of painful struggle and effort crowned by success. Miss Jones announced that the Council of Girton College had placed over the old front door a tablet bearing the words, "Emily Davies Court," and before the meeting broke up Miss Davies delighted her guests by showing many interesting records of her earliest work for women. Miss Davies has offered the sum of money to the Council of Girton College in the interest of the much needed extension of the East Wing.

MISS E. JOHN, M.A. London, the Second Mistress of the Tun-

bridge Wells County School for Girls, has been appointed to the Head Mistress-ship of the High School for Girls, March, Cambridgeshire.

THE quarterly meeting of the Moral Education League will be held on Friday, May 3, at 8 p.m., at the Royal Society of Arts, John Street, Adelphi, when Mr. F. J. Gould will present a scheme for the Correlation of School Subjects of Instruction. Open to the public. Discussion invited.

CAMBRIDGE CONFERENCE ON SCRIPTURE TEACHING.—This Conference will be held in the Victoria Assembly Rooms at Cambridge from April 10 to April 13, and the chair will be taken by Mr. H. Cradock-Watson, M.A., Head Master of Merchant Taylors School, Crosby, Liverpool. The Conference is open to all schoolmasters, head masters, and assistants, and to all interested in the question of Scripture teaching in our public schools, established Churchmen and Free Churchmen alike. The following have already consented to give addresses or to read papers:—The Bishop of Hull (Dr. Kempthorne); Dr. H. B. Swete, Lady Margaret Professor of Divinity; Canon Kennett, Regius Professor of Hebrew; Dr. Foakes-Jackson, of Jesus College, Cambridge; and the Head Masters of Bradfield, Plymouth College, Bishop's Stortford College, and the Friends' School, Reading. The object of the Conference is to discuss the best methods of constructive Bible teaching in secondary schools in the light of modern scholarship. The discussions will be of a practical character, and every member will have an opportunity of contributing to them. Those who wish to join the Conference should send in their names to the Secretary, Mr. N. P. Wood, 66 Hadham Road, Bishop's Stortford. To cover expenses of printing, &c., members are asked to send a registration fee of 2s. 6d., which also entitles them to receive a bibliography and other circulars issued. The meetings will be held in the mornings and evenings, leaving the afternoons free for expeditions. The first meeting will be at 8 o'clock on Wednesday evening, April 10. The dates of the Conference being in vacation, members will have no difficulty in securing lodgings in Cambridge.

FROM **HORACE MARSHALL & SON'S LIST**

COLONIAL HISTORIES

This series is intended to supply the need for short interesting histories of British Colonies and Dependencies, written simply, but clearly and definitely, and suitable for use in the Upper Forms of Schools and in Training Colleges.

1. **AUSTRALIA.** By THOMAS BATESON, M.A., Director of Education to the Waterloo with Seaford Education Committee.
2. **CANADA.** By C. L. THOMSON.
3. **INDIA.** By M. A. HOLLINGS, M.A., Assistant Lecturer in Education to the University of Birmingham, formerly Head Mistress of the Church of England College, Edgbaston.

Price 1s. 6d. each.

Educational News.—"Interestingly written. . . . Would afford very profitable reading for senior pupils."

The Scotsman.—"Well and carefully written."

The Westminster Gazette.—"A clear, straightforward narrative."

The Guardian.—"Lucid, and to the point."

Full particulars of this Series will be sent post free on receipt of a post card.

MESSRS. BELL'S NEW EDUCATIONAL BOOKS.

GEOMETRY FOR SCHOOLS.

By **W. G. BORCHARDT, M.A.,**
and the **Rev. A. D. PERROTT, M.A.**

Ready Immediately :

Vol. I-IV in One Volume. **3s.**

This Volume covers the ground of the Oxford Local and Part I of the Cambridge Local Examinations.

Vol. IV.—Circles. **1s.**

Now Ready :

Vol. I.—Covering Stages I and II of the Board of Education Circular, No. 711, 1909. **1s.**

Vol. II.—Properties of Triangles and Parallelograms. **1s. 6d.**

Vol. III.—Areas. **1s.**

Also Vols. I-III in One Volume, **2s. 6d.**

Ready Shortly :

Vol. V (Proportion), Vol. VI (Solids).

Vols. II to VI cover Stage III of the Board of Education Circular.

BELL'S SIMPLIFIED LATIN CLASSICS.

Edited, with Notes, Exercises, and Vocabulary, by **S. E. WINBOLT, M.A.** Crown 8vo. With numerous Illustrations. **1s. 6d.** each.

New Volumes :

Virgil's Athletic Sports. Ready April 7th.

Virgil's The Taking of Troy. Ready Immediately.

EASY LATIN PLAYS.

By **M. L. NEWMAN**, High School for Girls, Sheffield.
Crown 8vo. Sewed. **6d.**

Of the two plays which are included in this volume, "Mater Gracchorum" is published at the request of teachers who attended the Summer School of Latin at Bangor. The play was written to serve as a reading book for an Upper Third Form during the second and third terms of the year in which Latin was begun.

CIVIL SERVICE EXAMINATION PAPERS.

Edited by **H. N. ADAIR, M.A.**, Senior French Master at the Strand School, King's College, London.

This new series is intended primarily for the use of Candidates for the Middle Grades of the Civil Service.

HISTORY PAPERS. Edited by **A. PERCIVAL NEWTON**, M.A., Assistant Master at the Strand School. Crown 8vo. **1s.** Just Published.

FRENCH COMPOSITION. Reprinted by permission of H.M. Stationery Office, and Edited, with Brief Notes, by **H. N. ADAIR, M.A.** Crown 8vo. **1s. 6d.**

Crown 8vo. **2s. 6d.**

ADVANCED ENGLISH GRAMMAR THROUGH COMPOSITION.

By **JOHN D. ROSE, M.A.**, Rector of the Kirkcaldy High School.

The present book completes a course of English Grammar for schools according to the methods laid down in the *Elementary English Grammar through Composition*, by the same author. The title explains the object in view. It is to treat Grammar, not as an end in itself, divorced from immediate utility, but as arising out of everyday forms of speech, and as giving practical help in their mastery and in the completeness of their study. The terminology recommended by the Joint Committee on Grammatical Terminology for all Languages taught in Schools has been adopted throughout.

stating full name and address of the sender; and all Foreign Money Orders

must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE ORDER IN COUNCIL.

EXACTLY four years ago to a day the Registration Council was dissolved by Order in Council, and it has taken close upon five years of "hammering" (the word is Mr. Acland's) to obtain the Order in Council authorized by Section 16 of the Education (Administrative Provisions) Act, 1907, "to constitute a Registration Council representative of the teaching profession."

To-day, as Dr. McClure said to the secondary teachers who met a week ago at the University of London, we start with a clean slate, and for our part we feel no inclination to hark back more than is necessary, or to renew our old griefs. Yet we cannot forget, as Dr. McClure also reminded us, that it is to Mr. Pease, and not to his predecessors in office, that our gratitude is due; and that the constitution of the new Registration Council, embodied in the Order in Council, is identical with that presented to the Board of Education by the Conference of Teachers who met on November 13, 1909, with the sole difference that a definite number of University representatives are appointed instead of an indefinite number to be co-opted.

Likewise the financing of the Council, which for four years was the lion in the path (the Treasury was Sir Robert Morant's Mr. Jorkins), has been disposed of in as many months; and, Dr. McClure again informs us, the financial arrangement is identical with the proposals submitted to Mr. Pease by a representative Committee of teachers. Briefly, the Treasury undertake for the three years of its existence to finance the Registration Council.

As regards its constitution, the Council is identical with that appended to the White Paper—four groups of eleven members each—Primary, Secondary, University, and Technical or Specialist teachers, with a chairman to be elected outside their own number, but in all other respects Sir Robert Morant's recommendations have been ignored. The Council will have a perfectly free hand, and will not be debarred from framing the Register by sections or compartments, or from imposing

different qualifications for each section. In fact, by the ordinance that the Council shall appoint ten Committees to represent the ten kinds of technological or specialist teachers, and shall consult their Committees before establishing the conditions of registration, it is rather implied that the Register will be framed sectionally. This, it hardly needs saying, is very different from the class distinction of Division A and Division B. No teacher in any section will be able to boast that he is greater or better than his neighbour in another.

We note, further, that this is a Registration Council, and that the forming and keeping a Register is the sole duty assigned to it. There is in the Order in Council no hint or suggestion of the "other duties or other objects" of Sir Robert Morant's Teachers' Council, which cares only for the unification of the profession, and shows "no keen interest in the Register or the purposes it might serve." Let us not be mistaken. We share to the full Dr. McClure's aspirations that the Council may some day become the mouthpiece of the profession, "a guide and an inspiration," but it must first prove its mettle by accomplishing the task that has been assigned to it by Act of Parliament, and three years is none too long a time for such a Herculean labour. It is a challenge thrown down by the State to the whole profession. The old Registration Council failed, but the task allotted to them was from the start an impossible one. They had to carry out regulations in the framing of which they had had no voice and which they had no power to amend. They had no financial aid, and, when they were dismissed at a month's notice, bankruptcy stared them in the face. The new Registration Council starts with a free hand and free from financial cares. We have confident hopes that by 1915, if not before, the Council will have framed a Register that includes every competent teacher and none but competent, and by so doing will have taken the first step towards the realization of the aim for which the Teachers' Guild was founded, "to obtain for the whole body of teachers the status and authority of a learned profession."

REVISION OF THE AUTHORIZED VERSION OF THE NEW TESTAMENT.

IT has been evident to many people for some time that some step must be taken to prevent the gradual substitution of the Revisers' "construe" for the old "English Bible" in the Church of England, and last year Canon Beeching, now Dean of Norwich, undertook the laborious and rather invidious task of obtaining signatures to a Memorial in this sense. This Memorial, influentially signed, was presented to the Archbishop of Canterbury by a small deputation on March 5 of the present year. The text of the Memorial was given in the *Times* of that date, with the full list of signatories, an imposing list containing a very large number of heads of schools and of colleges, and others engaged in education; many names of the first distinction in literature and the study of literature, besides those of editors of the chief journals, and many well known and important names in other professions. The memorial was primarily intended to represent the views of literary writers and students, it being felt that the preservation of the "English Bible" was a matter of concern quite as much to lovers of literature as to churchmen and divines, and in fact more so, since changes irreparably destructive to the translation as literature need not do any direct harm at all to doctrine.

The memorialists asked that the Archbishop would appoint a small Committee to correct the Authorized Version of the New Testament, just where correction is plainly needed and no more, so as to fit it more adequately for present-day use in public worship. Dr. Beeching, who followed Dr. Boyd Carpenter, introducer of the deputation, gave some very striking instances of the mistakes made by the Revisers, and urged that the two cardinal principles on which they worked could

not be justified: the one being always to render the Greek aorist by the English "did" instead of "have," and the other, in all cases and under all conditions, to render the same Greek word by the same English. (It would be interesting to know how they would have treated the French *aimer* on this principle.) Dr. Beeching gave as an instance of their obstinacy the alteration of the splendid phrase "The Lord God omnipotent reigneth," to the commonplace and unarrestive "The Lord God Almighty reigneth," the point being heightened by the fact that Trench had adduced this very phrase as an example of the fine ear of the old translators, and the unerring instinct shown in choosing "Omnipotent" when the mere sense would have been quite satisfied by "Almighty."

The Archbishop's reply to the Memorial was temporizing and unsatisfactory. He laid stress upon the textual question: and suggested that any revision could wait till scholars had settled the Greek text. This, however, passes by the main contention of the memorialists, who made no complaint of changes necessitated by textual improvements, but only of the innumerable alterations of the English phraseology, where no textual question is involved, and in which the change makes the language read like a painful construe instead of an ordinary English sentence. The Archbishop, however, suggested that a trial revision of a small portion of the New Testament should be undertaken privately by competent hands as a sample of what was proposed, and a letter from Dr. Beeching in the *Times* of March 9 announces that a trial revision of the Epistle to the Hebrews has been at once undertaken by two scholars, one in Greek and one in English. It must be borne in mind, however, that the important point is not the Greek but the English, and the full revision would best be done by a bi-form committee, one-half consisting of Greek scholars who considered chiefly the exact translation (the Revised Version itself would do for this purpose); the other of English scholars who treated their version merely as good or bad English, and altered it accordingly without change of sense.

A characteristic letter of Prof. Saintsbury's in the *Times* of March 9 gives his reasons for refusing to sign the Memorial, although in hearty agreement with everything there said against the Revised Version, which he indeed speaks of as "that abomination of desolation." His view is that "not the most accomplished master of style" could "patch the actual coats with his new-old stuff." In fact, he would have us either keep the Authorized Version exactly as it is, or have a whole new translation—a Twentieth Century Version. There is much to be said for this view, but it ignores the necessity of some change to secure vitality. The "English Bible" is still a great Living Power; but its livingness is with every generation slightly lessened by slow obsolescence, not only of phrase (e.g., what reader in a thousand now understands St. Paul's phrase "I know nothing by myself"?) but also of scholarship, and the question for all practical minds is: How to preserve to the "English Bible" all its literary power and traditional weight, while keeping it a "living book," not a revered monument.

In any fresh revision for this purpose the Revisers would do well to have in the room a trained parrot, or a phonograph, repeating every five minutes Lord Melbourne's phrase, "Can't you let it alone?" the danger being infinitely greater of too much change than too little. Meanwhile, we welcome such experiments as that announced by Sir Edward Clarke. If he can produce a Revision that will satisfy both the Biblical scholar and those who love the well of English undefiled he will have taken the first step towards a New Authorized Version.

CANON SWALLOW, having accepted a country living, will resign the Head Mastership of the Chigwell School at the end of the summer term. The Church's gain is our loss, and no one will be more missed at all gatherings of London teachers, both official and social.

REVIEWS AND MINOR NOTICES.

The "Poetics" of Aristotle. Translated from Greek into English and from Arabic into Latin, with a Revised Text, Introduction, Commentary, Glossary, and Onomasticon, by D. S. MARGOLIOUTH, Laudian Professor of Arabic. (10s. 6d. Hodder & Stoughton.)

The title sufficiently indicates the plan of this work. The book is somewhat tiresomely arranged. The English translation appears first (after the Introductory chapters), with a commentary at the foot of the page; then follows the Greek text, with the Editor's Latin rendering of the Arabic opposite, and critical notes at the foot; then the Glossary and Onomasticon. The matter usually sought in a commentary has to be looked for in many different parts of the book; and the inconvenience of separating the English translation from the Greek text is great. If the work is ever reprinted, we should suggest that it would be far more convenient that the Greek text and English translation should face one another, with the Latin version on the lower part of the same pages; and that the Commentary should occupy a separate portion of the book, and should include much of the material now scattered over the Introductory chapters, the Onomasticon, and the Glossary.

As we shall have to comment adversely on the work in some of its aspects, it will be best to state first the reasons which every student of the "Poetics" will find for gratitude to the Editor. In the first place, he has done what few, if any, other English scholars could have done—he has given us a complete Latin translation of the Arabic version, and a considerable amount of material for a judgment on the value of that version. It would appear that its value, as judged from the specimens which Prof. Margoliouth gave of it in his "Analecta-Orientalia" many years ago, has sometimes been over-estimated, and that, though it perhaps represents an older tradition than the principal Parisian MS. (on which the current texts are mainly based), it is not often a better guide; and that some of the supposed "confirmations" of conjectures by the Arabic are really of little worth. In the second place, Prof. Margoliouth has re-examined a great number of Greek MSS. of the work, and gives strong reasons for thinking that the existing MSS. are not all derived, directly or remotely, from the Parisian Ac, as the most distinguished recent editors have supposed. As regards Riccardianus 46 at least, his case seems to be almost conclusively made out. It is true that the use which Prof. Margoliouth makes of his material in the actual construction of his text does not always inspire confidence; and a more complete exposition of the interrelation and filiation of the various MSS. is urgently required. Until that is forthcoming, the exact valuation of the several texts cannot be made. But the evidence and suggestions which this volume contains cannot but be fruitful in inquiries and in interesting results. In the third place, the editor often calls attention to new, or at least generally neglected, material for the interpretation of particular passages; and though his guidance is sometimes that of a will-of-the-wisp, the passages upon which a truer light is shed are sufficiently numerous to render the book well worth studying. We may add that the greater part of his Commentary contains many references to the opinions of modern writers on æsthetic or dramatic questions. The writers quoted are not always of first-class value, and their views are often summarized in a form which is too brief to be clear or really accurate; but English editors of the "Poetics" have not always done as much as they might to place Aristotle's doctrines in their proper relation to modern views; and Prof. Margoliouth's contributions to this task, in spite of their defects, are often suggestive of lines upon which good work may be done.

Apart from matters of detail, which will be of interest mainly to professional scholars, the chief novelties of Prof. Margoliouth's work consist in his treatment of the "Poetics" as an esoteric work, and in his discussions of the meaning of *ἐμπειρία*. He regards the "Poetics" as a work "not intended

by its author to be understood except by members of his school, persons who accepted his system and learned his works by heart." Without the oral instruction conveyed only to the initiated, the work must be unintelligible; and apparently the clue to the meaning of a passage may be found anywhere in the Aristotelian corpus, though only the initiated know where to look for it. It is unfortunate that the Professor gives us no clear opinion as to the epoch at which the process of initiation in the Peripatetic school ceased, and at which the works of Aristotle became finally "impenetrable as the palace of Ecbatana"; and no criterion by which a modern scholar, who is necessarily outside the sacred circle, may judge when he has hit upon the right passage, the real clue, in his search for light upon difficulties. And in fact, when at the end of his discussion of this subject, Prof. Margoliouth deduces (from the theory of the esoteric character of the "Poetics") the principles upon which a modern editor must work, we are surprised to find that (apart from a slight exaggeration of statement) they are the mere commonplaces of the editorial craft as applied to any writer whatever. They are these: (1) "No interpretation is certain for which chapter and verse cannot be cited from Aristotle's works." This is simply an over-statement of the sound principle of interpreting Aristotle by Aristotle (or Homer by Homer) wherever possible—a principle which is of special force when the editor is dealing with so systematic a writer as Aristotle, but which is just as binding whether the works are "esoteric" or not. But it is an over-statement, for many passages in Aristotle really receive their interpretation from Plato and others, and no scholar regards the interpretation in these cases as uncertain. Prof. Margoliouth himself interprets Aristotle by Plato or Hippocrates, with no indication of uncertainty; and it is absurd to rule out all interpretations which do not arise directly out of other parts of the author interpreted. Facts come to us in many ways; and unless we are to assume that the whole of truth is contained in Aristotle, evidence not contained in him may be of use in showing us his meaning. (2) "No interpretation is satisfactory which fails to account for every syllable of the text." Of course not—whether the writer be esoteric or not. (3) "No interpretation is tolerable which ascribes to Aristotle propositions which are unmeaning or which conflict with common sense." Again, of course not—whether Aristotle's writings are esoteric or not. But, in fact, the evidence that the writings—at any rate the "Poetics," with which we are now concerned—are esoteric comes to nothing more than the fact that the same technical terms are used in different works, and that there is a considerable (though by no means complete) degree of interdependence and consistency between them. ("Common sense can hardly expect perfect consistency throughout the works of a long career." "The foolish and the dead alone never change their opinion"; and Aristotle was not foolish.) The statements made on page 22 are most misleading. We are told that "the 'Poetics' acknowledges itself an esoteric work." It does nothing of the kind. In the passage referred to, Aristotle merely says, "Enough has been said on this subject in my published writings." This at most means that the "Poetics" was not published when the sentence was written; not that it was never published or intended for publication, or meant only for the circle of the initiated. Again, "from the Nicomachean ethics we learn that the practice of getting philosophical treatises by heart first and afterwards becoming acquainted with their meaning was familiar to the Greeks: this, we are told, was done in the case of the poems of Empedocles." What does the Nicomachean ethics really say? That repetition of arguments does not imply understanding of them, because men who are drunk or mad or asleep may repeat, without understanding their meaning, verses of Empedocles which they have learned. The passage does not imply the practice of learning an esoteric work by heart without understanding it, but simply the possibility of not realizing the meaning of words which you repeat when you are drunk. A considerable number of the instances which Prof. Margoliouth quotes to illustrate his theory are so treated as to deprive us of all confidence in his judgment.

The worst perhaps is the rendering of τῷ γένει ἑτεροῖς (in Chapter I) by "differing in category": the passages quoted are misinterpreted or irrelevant. (In fact, in his text, Prof. Margoliouth prints the "German emendation which substitutes 'in' for 'categorically,'" though on page x he argues against it.) Other equally impossible interpretations—based on the assumption that Aristotle means the same thing by the same word in two passages drawn from wholly different contexts—are those of σύνολον and ἁρμονία; and many others are scattered up and down the book.

As regards κάθαρσις, Prof. Margoliouth most usefully refers to passages in the "Problems" (especially xxx. 1) which give the Aristotelian theory of the physical causes of certain emotions, and explain in a great measure why the metaphor of κάθαρσις came to be used by him to express the operation of tragedy. Κάθαρσις is the medical operation by which certain disorders (excess of heat or cold) in the black bile are cured; and it is such disordered conditions of the black bile that give rise to fear, madness, "enthusiasm," and other disquieting emotions. The πάθημα, which is cured by tragedy, is excessive coldness of the black bile; this excess of cold is driven out by the external cold produced by the fear aroused by tragedy, fear having a chilling effect. The cure is homœopathic. (It is so also when the bile is too hot, and is cured by exciting or heating instrumental music: such is the cure of "enthusiasm" or "madness." We need not here discuss the Professor's misinterpretation of parts of the passages in the "Problems." The general theory of homœopathic cure—κάθαρσις of internal excess of heat or cold by the application of external heat or cold—is Aristotelian and relevant.) Prof. Margoliouth does not sufficiently allow for the possibility that in the "Poetics" and the "Politics" Aristotle may yet be thinking primarily of the emotional effect, even when his metaphors are drawn from the physical, which he supposes to underlie the emotional. But he does help to explain what had long been partially obscure.

To enunciate the new or strange interpretations contained in the Commentary and Glossary would be too long a task for a review. Sometimes Prof. Margoliouth's original suggestions are brilliant and attractive: more often they are paradoxical or amusing without being convincing; sometimes the inaccuracies are palpable. The book is, in fact, not one for any but highly trained Aristotelian scholars. In the hands of young or inexperienced students it would (where it differs from other commentaries) be more often misleading than not. But for trained scholars, who will treat every reference and every suggestion critically, there is much that will be of interest and not a little that may prove illuminating. They will at any rate feel that in reading the book they have been in contact with an amazingly erudite and clever mind; and they will be able to enjoy the entertainment provided by the Professor's most erratic passages, without risk of being led away (as the inexperienced might easily be) from the paths of sound criticism.

Tennyson and his Friends. Edited by HALLAM LORD TENNYSON. (10s. net. Macmillan.)

The volume is an appendix or supplement to the "Memoir" and gathers up the few fragments that remain. We are grateful for any scrap of information which throws light on the poet's mind and art, the setting and circumstances of the poems, the books and friends that influenced him and his own literary judgments, but the field was so thoroughly explored in the two goodly volumes of 1898 that the aftermath is necessarily thin and disappointing. Of Tennyson's friends we have many biographical details, and of one, James Spedding, almost a complete biography, but the connexion of these details with Tennyson himself is of the remotest. Half the volume consists of reprints: all Tennyson's poems on his friends, "Tennyson and W. G. Ward," mainly from "Problems and Persons," by Wilfrid Ward; "Music, Tennyson and Joachim," by Sir Charles Stanford, from "Studies and Memories"; "Tennyson as a Student of Nature," by Sir Norman Lockyer; "Tennyson," by Arthur Sidgwick; an oration read in Trinity

College Chapel; "Tennyson: his Life and Work," by Sir Alfred Lyall; a review of the Memoir in the *Edinburgh Review*; "Tennyson: the Poet and the Man," by Prof. Henry Butcher, Address to the British Academy; "Arthur Henry Hallam," by Dr. John Brown, from "Horae Subsecivae"; and "Tennyson's Arthurian Poem," by Sir James Knowles, from the *Spectator*. It is a great convenience to have such scraps for oblivion rescued from Time's wallet, but the reader must not expect novelty, and he might have been credited with possessing a copy of Tennyson's poems.

The gem of the volume is "Recollections of my Early Life, by Emily, Lady Tennyson," written for her son in 1896, with the beautiful crayon drawing by G. F. Watts. No woman of our day has had so many admirers, but hitherto she has been known only *viva per ora vivum*. These few pages show such literary qualities that they make us half regret that she was content to live for and in her husband. She contrives to leave on us a kindly impression of "Aunt Betsy" in spite of needle-pricks, whippings, and even head-bangings. Here is a portrait that, if we mistake not, will often be quoted by future biographers:—

Your Aunt Emily (beloved of Arthur Hallam) had wonderful eyes—depths they seemed to have—and a fine profile. "Testa Romana," an old Italian said of her. She had more of the colouring of the South, inherited, perhaps, from a member of Mme de Maintenon's family, who married one of the Tennysons. Your father had also the same kind of colouring. All, brothers and sisters, were fair to see. Your father was kingly, masses of fine, wavy hair, very dark, with a pervading shade of gold, and long, as it was then worn. His manner was kind, simple, and dignified, with plenty of sportiveness flashing out from time to time.

Next to this, the most interesting chapter is the account of Tennyson's two brothers, Frederick and Charles, by Charles Tennyson. The elder brother was as erratic and original as W. S. Landor, with whom he has more in common than the accident that they both took up their abode at Florence. He was a good hater. He hated Society, "the high jinks of the high noses." He hated still worse republicanism, and coupled Mazzini with Nana Sahib. He hated parsons—"black men with white ties and little else white about them"—and he hated with a worse hatred all Atheists, virtual and avowed, Herbert Spencer among the number. Like Carlyle, he himself held no form of creed, except during a phase of Swedenborgianism. He was a mystic whose cult was music, and poetry his occasional diversion. Between this Ishmaelite and Charles, the gentle sonneteer, the devout Anglican, the exemplary "persoun of a toun," there is little in common save the poetic vein. "They represented the two extremes of the Tennyson temperament, the mean and perfection of which is found in Alfred."

From the remainder of the volume we might pick a number of striking *obiter dicta*, and we miss the full index which enhanced the value of the Memoir. It is the misfortune of a memorial volume contributed by friends that an editor is precluded from the use of his blue pencil, and can only add an explanatory or corrective note. We are sure, for instance, that Mr. H. G. Dakyns, had he lived, would not have left his fragmentary reminiscences in their present form—the text of Catullus with the misprints or the prose versions with the misrenderings; nor can we understand a ripe scholar's approving the Tennysonian pronunciation of "Frater ave atque vale," to our ear a false note in an otherwise perfect poem.

Themis: a Study of the Social Origin of Greek Religion.

By JANE ELLEN HARRISON. (15s. net. Cambridge University Press.)

This sequel to "Prolegomena to Study of Greek Religion" fulfils the promise of that scholarly and original work, but it still leaves us on the threshold of Greek religion as we know it in its consummate form, in the drama of Aeschylus and Sophocles, the fragments of Parmenides and the dialogues of Plato. Religion indeed, in the common sense of the word, as when we talk of the Christian religion, lies outside Miss Harrison's purview. While fully acknowledging the power

and value of the religious impulse, she holds no less strongly that as soon as this becomes crystallized in creed and dogma it ceases to be religion. "First, it is a confident statement about something unknown, and therefore practically always untrustworthy; secondly, if it were right and based on real knowledge, then its subject-matter would no longer belong to the realm of religion; it would belong to science or philosophy." To understand Miss Harrison's standpoint we must further note how profoundly her conceptions of Greek divinities have been influenced by Monsieur Bergson. As she finely remarks, it is characteristic of a work of genius that it casts a great searchlight into dark places far beyond its own immediate province. In this case it revealed to her that the primitive cults of Dionysus and Orpheus were unconscious attempts to express *la durée*, the stream of life, ever changing, yet ever one and indivisible.

Miss Harrison takes for her text the Hymn of the Kouretes recently discovered at Palaikastro on the eastern coast of Crete. The hymn, including the conjectural restorations, runs to less than a hundred words, but the whole treatise may be fairly reckoned an explanation or illustration of the text. The hymn is an invocation to Zeus, not yet the Olympian Zeus of Homer, but a youth, the lord or leader of youths, the Kouretes, his *thiasoi* or ministers. He is bidden come and join in dance and song. Then follows the etiological myth, "for the Kouretes tended thee as an infant." Last come the benefits; the earth shall give her yearly increase and Themis shall prevail.

It is no exaggeration to say that this inscription is to Greek mythologists what the Rosetta stone was to Egyptologists. It confirms what was before conjectured, and reveals to us religion in the making. We can only glance at a few of the wards that the key is shown to fit. The title emphasizes the main conclusion to which Miss Harrison's studies have led her—that primitive religion was collective, an embodiment of the instincts, emotions, and aspirations of the group, tribe, or clan, not of individual consciousness. The Kouretes are not priests or medicine-men, but the men of the tribe. Secondly, the dance is a magic rite, the essence of magic being the common desire for union with or dominion over the powers outside himself—life, death, and the forces of nature. This leads to the discussion of sacraments, of totemism, of games, and of the drama. Each of these topics has a whole literature of its own, and it would be impertinent to attempt to criticize the interpretation here offered of any one of them. We may note, however, as of special interest to our readers, Prof. Gilbert Murray's excursus on the ritual forms preserved in Greek tragedy. In opposition to Prof. Ridgeway he holds that the Greek drama, no less than the Olympic games, took its rise not in funeral celebrations at the grave of a dead hero or chieftain, but in the ritual of the Eniautios-Daimon, the periodic process of growth and decay, death and resurrection. To take a typical play, the "Bacchæ," how clearly—by help of this Röntgen ray, if only we remember that Pentheus is a double of Dionysus—how clearly we see the skeleton, or we would rather call it the scaffolding, on which the play is built. We have the whole sequence: "Agon, Pathos and Messenger, Threnos, Anagnorisis and Peripatetia, and Epiphany. The Daimon is fought against, torn in pieces, announced as dead, wept for, collected and recognized, and revealed in his new divine light." We have only one comment. We cannot believe that Euripides was consciously recasting or modernizing the old Dionysus mystery, any more than Milton was aware that Samson Agonistes may be traced back to a sun myth. Perhaps it is an unnecessary caution, but we must beware of thinking that by exploring the origins of religion we shall ever discover the essence of religion, any more than by observing the antics of the monkey-house in the Zoological Gardens we shall fathom the nature of man. Primitive religion was collective, naturalistic, partly *awe* and partly Themis, "was uns alle bündigt das Gemeine"; but it is to the individual, not the tribe, that we must trace what religion stands for to-day, to Socrates, Marcus Aurelius, and Epictetus, to Moses, Mohammed, Confucius, and the Buddha, and to a greater than they.

Across the Bridges. By ALEXANDER PATERSON.
(1s. net. Edward Arnold.)

We welcome a cheap edition of a remarkable book. That the first edition was exhausted in the first six months is a healthy sign, for there is nothing sensational about it, and it can appeal only to the reader who is genuinely interested in social problems. Since the famous "Casual" of the *Pall Mall Gazette* it has given the fashion for literary men to go slumming for a day, a week, or even a month, and elaborate their experiences of doss-houses, casual wards, and mean streets, in "middles," magazine articles, and novels, but Mr. Paterson, with no such *arrière pensée*, has lived for years across the bridges and shared the life of the Borough. Now that he has taken up another but a cognate sphere of work, he tells us quite simply what he has seen, and pointing out ways in which the life of the coming generation might be raised and humanized.

Inter alia, he has served as an elementary teacher in a country school, and we must be content to notice only this part of his work. To the staff of the L.C.C. schools he pays a high tribute:—

As a body of instructors it is a miracle of efficiency. The public-school master would pale before their task and sink beneath the handicap. But the London teacher has the great weapon of method, almost unknown to the public schools; in his training college he has mastered this technique and the theory of his work. A hundred methods are at his command to draw out the backward, to untie the knots of the confused mind, to stimulate the lagging interest of the lazy. . . . Such remarkable powers as these are not by any means exceptional. The really good teacher will be found almost in any school in London, while the average certificated man is an extraordinarily good teacher compared with his colleague in a public school.

We should like to have quoted the entire passage, but must pass on to the reverse of the medal. How comes it, Mr. Paterson asks, that in secondary schools there are *masters*, but in the elementary schools there are *teachers*? In the South of London he finds the main reason in the fact that the teacher lives far away from the school where he teaches. He can know nothing of the boy's home, and can keep up no connexion with him when once he has left school. Even in school, with classes of sixty, the boy to him can hardly be a personality; he falls into one of three divisions—the sheep, the goats, or the merinoes. For this radical defect, beyond the reduction of the numbers in a class, Mr. Paterson has no remedy to suggest; but for the creation of a public-school spirit he offers several suggestions. First and foremost comes the encouragement of games. Larger playing grounds or playing fields must be provided for all schools; boys must be taught to play, and, if we mistake not, he would have them made to play. Here we are wholly with him; but as to another proposed reform we hesitate. In a word, he would not keep the dullards at school beyond the age of twelve. He argues that by the age of ten the teacher can spot for a certainty the boys who will never make anything of book-learning, the future hewers of wood and drawers of water, and that to keep such boys up to the age of fourteen is not only a tax on the teacher but a waste of the rate-payer's money. By twelve they can be taught as much of the "three R's" as they are ever likely to know. We are entirely in favour of a separation of dull and clever children, but a more excellent way seems to us to provide manual employment, drill, &c., for the non-intellectuals. We have space only to note one more valuable suggestion. In his experience not more than half the staff of elementary schools are fitted to give religious instruction. He would therefore commit the Bible lesson to those of the staff who volunteer, doubling the numbers of the class and relieving the teacher by making half the lesson consist of silent reading.

The Dramatic Method of Teaching. By HARRIET FINLAY-JOHNSON. (3s. 6d. Nisbet.)

"In vallem Egeriae descendimus et speluncas . . ." We are here admitted to the Happy Valley so glowingly described by Mr. Holmes as a vision of "what might be." A recent contributor of ours has suggested that the picture must have

been idealized, and she would doubtless have completed our quotation from Juvenal. That is not our view. We have here a true picture, though a partial one. It is taken on a bright spring morning, and there is no hint of even a passing shower. Even at Sompting, in a mixed school of 130 scholars, there must have been naughty children and assistant mistresses who would not or could not play the game, but of disorder or punishment there is never a word, and the staff are not once mentioned. All from the very start goes without a hitch. Yet though the shades are suppressed, the book carries conviction that the gospel of happiness in childhood was preached, or rather practised, with the happiest results, and that Mr. Holmes was justified in holding up as an ideal Egeria's school.

"The Dramatic Practice of Teaching" would be a more exact title, for there is very little of methodology, and the bulk of it is an account of plays actually performed at Sompting. The wonderful thing about it is that the children did it all themselves. They were at once playwrights and actors, stage-managers, costumiers, machinists, scene-shifters, and audience. To learn how it was all done we must refer our readers to the book. It is all told with such gusto that even if they are not teachers they will enjoy the story, and teachers who have neither the power nor the will to turn their school into a stage cannot fail to gain many useful wrinkles. It does indeed tax our faith to believe that a school of eighty (infants excluded) were kept actively employed, or even passively receptive, all the while that the play was in progress. The four winds must now and again have escaped from the *speluncae* and needed the *quos ego* of an Egeria to still the storm. There comes the rub. It needs genius, and genius of a special kind, to dramatize teaching, as Miss Finlay-Johnson did, to turn work into play and play into work. Genius may fail no less than common clay—witness Pestalozzi and Tolstoy.

A Brief Course in the Teaching Process. By GEORGE DRAYTON STRAYER. (5s. 6d. Macmillan.)

Dr. Strayer is Professor of Educational Administration in Columbia University and formerly Adjunct Professor of Elementary Education. In this book he applies the first principles of pedagogics to the practical problems that face the teacher in the classroom. As a textbook for the last year in a training college we can strongly recommend it. Some adjustment of focus will be needed to fit it to the different conditions of English teachers, but there is no difficulty in interpreting "recitation," "grade," &c., nor would even Mrs. Humphry Ward object to the teacher's invariably figuring as "she." Technical terminology is carefully eschewed. Most stimulating and suggestive are the "Exercises" that follow each chapter. These are not like the barren *questionnaires* of French and German Readers, but are real riders and problems arising out of the text, and the student who could solve half of them (the whole would be far too exacting a demand) might safely be pronounced a master (we should have written a mistress) of the art of teaching. No less valuable are the specimen lesson plans and actual lessons (some recorded in shorthand) and the outlines for the study of English, Geography, History, and Arithmetic taken from the Teachers College Bureau of Publications. We could have wished for fuller extracts from Dr. C. W. Stone's "Study in the Measurement of Arithmetical Ability," without which it is difficult to understand and impossible to check Dr. Stone's elaborate tables. Our English Inspector is not given to reading pedagogic literature. R. H. Quick relates how an H.M.I. when asked whether he had read a colleague's book on Inspection answered, "No. F. has his way of inspecting and I have mine, and we shall each continue to go his own way." Even Inspectors have advanced since Quick's day, and we would commend to their notice the chapter on "The Teacher in relation to Supervision." It concerns supervisors even more than teachers. The least satisfactory chapter in the volume is that on "Moral Training," and here the American provenance of the work is a serious drawback. It is enough to note that the word "religion" does not occur. Space alone compels us to restrict ourselves to an indication of the contents, and we would gladly have dwelt on the admirable way in which the induction and the deduction lesson, preparation and questioning are dealt with. There is none of the strange jargon which mars our pleasure in reading Dr. Stanley Hall, and the only departure from English idiom that we have noticed is the use of "will" for "shall."

Thoughts on Education chosen from the Writings of Matthew Arnold. Edited by LEONARD HUXLEY. (5s. net. Smith, Elder.)

Mr. Marvin has already extracted for us the Arnoldian radium from the pitchblend of Blue books. Mr. Huxley gives a wider sense to "Education," and no less than forty-two extracts, about a sixth of the total number, are taken from the lectures "On translating Homer." Arnold suffers less than most great writers in extracts, and "the memorable phrases and stinging epigrams for the knotted cords with which to drive the money-changers from the sanctuary of the human spirit" (we are quoting from the Preface) can often be severed without much loss from the context. It would be a monstrous paradox to describe Arnold as nothing if not critical, for there is in him a high prophetic strain; but he was wholly wanting in constructive ability, and it would be a hopeless task to evolve from his writings a consistent theory of education. Most illuminative is the friendly duel between Arnold and Prof. Huxley. Huxley had challenged one of Arnold's famous phrases, that the aim of education is "to know the best that has been thought and said in the world," maintaining that physical science was of no less importance than literature. Arnold retorts that, by literature, he intends not only *belles lettres*, but all knowledge embodied in books. For instance, that a knowledge of classical literature implies a knowledge of the Greeks and Romans, their life and genius, what they were and what they did for us. There Arnold is content to leave the matter. He failed to see that books, however scientifically studied, will not satisfy the student of science, that his real school is the laboratory, not the library. Of science he himself knew nothing, and he looked on science teaching as a sop to be thrown to his three-headed Philistine dog. His gospel of culture, the message "Man shall not live by bread alone," that he preached with apostolic fervour and conviction, was more not less effective because it was one-sided, for men need not be reminded that they cannot live without bread. There is no danger of finding the Vulgate used as a Reader in the Seventh Standard, as Arnold recommended, or of relying on pupil-teachers as "the sinews of English primary instruction." There is danger that the Bible will be excluded from schools and that shorthand will be substituted for Shakespeare.

Thucydides: Book IV. Edited by A. W. SPRATT. (Price not stated. Cambridge University Press.)

Mr. Spratt, Fellow and Tutor of St. Catharine's College, Cambridge, here edits the Fourth Book of the "Histories" with the same care and niceness as he displayed in his editions of the Third and Sixth Books. His work is admirably suited for the University, nor can we say, considering the importance of a minute study of Thucydides to the learner of Greek, that the commentary is too full for a good Sixth Form. Elucidative matter has been collected by many scholars; the editor has judged discreetly what from their stores and from his own he should offer to the reader. Merely to show sympathetic interest in the book, we set down a few comments on its substance. The translations are, in general, happy; but in 10. 5, "brave show of ships" for *νῶν δεινότητος* suggests that the ships were formidable only in pretence, whereas the Greek means "from terror of the dread ships." Krüger's Greek Grammar is sometimes referred to. We do not think that it is now much used by young students. If they look at the latest edition of Kühner (Pt. i, Vol. i, p. 604), they will hesitate to accept Mr. Spratt's statement (page 146): "Attic Greek recognizes no feminine dual." In Aristophanes, "Lysistrata," 229, Mr. Rogers still keeps *τά*. But, as to grammars, the fault of some of the older editors was that they failed to understand that Thucydides used none. He puts, for example, a dative at the head of a sentence—e.g. *ὑποχωρήσας* in 10. 3—and leaves it to take care of itself. One of Shilleto's pupils amused him once by calling such a dative a "dative on speculation." So Thucydides has what we may term a "genitive in suspense"—a genitive left, as it were, "hanging," for which the reader may invent a grammatical construction if he pleases. Thus we have in 11. 4, *φυλασσομένων τῶν νῶν μὴ ξυντρίψωσιν*. It is a merit in Mr. Spratt that he does not make every Thucydidean usage fit the Procrustes' bed of some modern grammarian. He has not always sent us to what is newest. On 67. 2, *μετὰ τοῦ Δημοσθένους τοῦ ἑτέρου στρατηγοῦ*, he might have pointed out that the article is unusual when an apposition follows, and have referred us to Pfeiffauf, "Der Artikel vor Personen- und Götternamen," &c., page 25. In the difficult passage 117. 2, he seems not to have noticed that Stahl now ("Syntax," page 595) reads *τοῖς δ' ἐκ τοῦ ἴσου ἀνυπόμεινοι κινδυνεύειν εἰ καὶ κρατήσῃ*. On the form *περιστός* in 10. 1, a reference might have been given to the *American Journal of Philology*, xxviii, 4, 419 ff.

An English-Greek Lexicon. By G. M. EDWARDS. (7s. 6d. net. Cambridge University Press.)

C. D. Yonge's "English-Greek Lexicon" threatened to outlive Liddell and Scott, but it has had its day, and we may safely

prophesy will cease to be now that Mr. Edwards has provided an alternative. It was a meritorious work, but lacking in exact scholarship. Prose and verse, early and late usages were not discriminated, and many an unlucky pupil has found to his cost that Yonge's Greek prose would not pass muster. Mr. Edwards's scholarship is well up to date, and if he has a fault it is that he is too pure an Atticist. It may be a heresy, but we hold strongly that the Greek of Xenophon, of Lucian, and even of Plutarch, is quite good enough for the English schoolboy, and that to confine him to the golden age of Athens is as indefensible as it would be to demand of him Addisonian English or Louis XIV French. The introduction gives some pregnant hints on the style of the principal writers from whose works the Lexicon is compiled, with warnings against the bad Greek of Xenophon. The Prosody seems to us an excrescence. There is, perhaps wisely, no attempt to find equivalents for modern arts and sciences, discoveries and inventions, and the pupil will soon find that it is no good looking for words like "artillery," "trade-union," "strike," "chemistry." Even words for which fair equivalents might be found—"aesthetics," "political economy," "utilitarian"—are not tackled, and Attic orthodoxy excludes words like "church," "Christian," though an exception is made in favour of "christening" and "bishop."

Silvulae Academicæ. Verses and Verse Translations. By W. R. HARDIE. (7s. 6d. net. Clarendon Press.)

We are told that Greek and Latin verse composition is on its last legs and will soon cease to be set for scholarship examinations or the Classical Tripos. Monstrous as we think it that all boys, or the majority on the classical side, should be compelled to grind out logs and shorts, we still hold that for the elect they are not only an elegant accomplishment, but also a test of fine scholarship, and should be sorry to see them wholly abandoned as in Germany and America. To put it no higher, a volume of versions by H. A. J. Munro, by Jebb, and, we may add, by Prof. Hardie, gives us the same pleasure that a mathematician or a chess player finds in the solution of difficult problems. Too commonly the passages chosen are hackneyed, and the favourite metre is elegiacs. Prof. Hardie might take for his motto, "Pieridum loca nullius ante trita pede." First come two original poems in Latin hexameters on the anniversary of St. Andrews University and Buchanan's birthday, both of which Buchanan himself would have been proud to own. Large portions of Macaulay's "Horatius" and "Battle of the Lake Regillus" are done in the same metre. Here, while admiring no less the skill and mastery of the Virgilian metre, we cannot help feeling how impossible it is to turn a ballad into an epic. Far more successful is the version in hendecasyllables of Dr. John Marshall's "Ode to Burns." Composition masters might well take this as a text to show how, if the sense is fully grasped, the most intractable modernisms can be transformed into perfect Latin. We care less for the renderings from Homer. They show what is inevitable—the superiority of Greek to Latin, and it is no extravagant compliment to the translator to say that the same fact is apparent in the translation of a passage from the Pseudolus into Greek. The capping *tour de force* is the version in Horatian hexameters of an extract from Thackeray's "Book of Snobs." We note one oversight. In a poem headed "Thamesis," "old oozy Thames" is rendered "Anene pater." Is the lengthening of the last syllable in *nihil* (page 101) justifiable?

Mirabilia: a Short Collection of Modern Stories in Latin.

By CHARLES D. OLIVE. (1s. 6d. E. Arnold.)

The preface informs us that these stories were written at the suggestion of that most original of head masters, Mr. T. W. Dunn. It was a capital idea to substitute for the extracts from Caesar and Livy, "cooked" for beginners, familiar fairy stories and the like in a Latin garb. "Jack the Giant-killer," "The Wreck of the Brazenhead," "Washington and the Cherry-tree," to take three stories at random, are translated by Mr. Olive into simple but dramatic Latin. The book was written for Unseens, but will serve equally, if not better, for a reader, and may be had with or without a vocabulary. The last story of the Primrose League games seems to us pointless, and we question the latinity of "Radicales," "patriæ honori consulere," "præmium captare" (to win a prize), "canis ferox" (a fierce dog).

Direct French Course. By H. J. CHAYTOR. (1s. 6d. Clive.)

This course is specially adapted for pupils who begin French at the age of twelve or thirteen, now, thanks to the free-placers, an increasing number. The very first lesson plunges *in medias res* without introduction or comment: "Paul Dupont est un garçon," and we pass very soon from such banalities as "Monsieur Dupont n'est pas une mère." This is as it should be, and the pictures on which the lessons are founded appear again at the end of the volume, so that the pupil can be questioned on them without the text before him. The summary of accidence is a model of succinctness. Here, if anywhere, the half is greater than the whole. It

might have been well to add a few of the main rules for gender. Phonetics are, wisely we think, left wholly to the teacher.

La Foi Laïque. Par FERDINAND BUISSON. (3 f. 50 c. Hachette.)

M. F. Buisson modestly announces this volume as a *dossier*, not a book—"a book is not made of newspaper cuttings"; but the reader will not be deterred by this deprecatory note. In the collected speeches, addresses, and occasional writings of the last thirty-three years he will find not only an apology for the faith of a layman, but also a clear exposition of the first principles of national education and a refutation of the misconceptions and calumnies to which undenominationalism in France has been exposed. M. Buisson is no fanatic, and, while he would rigorously exclude the priest from national schools, he is equally opposed to his friends on the Extreme Left who would allow the schools to be made a propaganda against clericalism. In England the battle rages over the rights of the parent. It is well to hear so eloquent and so logical a defence of the rights of the child and of the State as the child's guardian. Let us quote one passage which sums up M. Buisson's creed. "L'instruction doit être laïque, parce que, si nous voulons que tout enfant acquière les connaissances que la Convention appelait déjà les connaissances nécessaires à tout homme, nous n'avons pas le droit, ni au nom de l'état, ni au nom d'une église, ni au nom de qui que ce soit enfin, d'empiéter jamais sur le domaine de cette liberté de conscience, qui est le fond même et la raison de toutes les libertés." M. Buisson looks forward to a time when it will be possible to read in the primary schools "les strophes enflammées des prophètes d'Israël et les plus belles pages de l'Evangile"; but this time, he tells us, is not yet. Fortunately, England is not like France, ranged in two opposing camps of clerics and laymen, and we hope and believe that no impending changes in our national education will see the Bible excluded from schools.

Contes d'Hier et d'Aujourd'hui. Edited by J. S. NORMAN and CHARLES ROBERT-DUMAS. (1s. 6d. G. Bell.)

The fairy stories of yesterday are familiar ones by Madame d'Aulnoy and Perrault; those of to-day are by the Professor whose name stands as joint editor. The latter have the advantage of being written for school purposes and containing no archaisms or unusual words. The questions are founded on illustrations at the top of the page and do not seem to us particularly happy, and the teacher might well be left to invent them. The materials for composition at the end of the volume are a real aid to teaching. The book may be had with or without a vocabulary. That supplied is meagre; for instance, it will not help the pupil to translate *bien fait* "handsome," or *vilain* "boor," on the first page.

Cours de Dictées. By P. C. H. SATGE. (1s. 6d. Clarendon Press.)

This small book is singular in giving more than its title promises. The first 76 of the 116 dictations are annotated and accompanied by English sentences to be turned into French. The notes in the main call attention to difficulties in pronunciation and points of grammar. We wish that Mr. Byrne, who introduces the volume, had told us exactly how it had been used at Eton. If, as we imagine must have been the case, the dictation was first read aloud by the form and the sentences translated *à voix*, it is a distinct disadvantage to have them on the same page as the text. We doubt, too, whether constant repetition of the rule with the exception is the best way of teaching genders. It would have been better to prefix a table of genders and refer to it by numbers. There is a table for pronunciation (without phonetics), and here too we should have preferred number references to notes. Otherwise the book seems to us well planned, and there is a clear advantage in passages written for the purpose over casual extracts.

"Oxford German Series."—(1) RAABE'S *Else von der Tanne*. Edited by S. J. PEASE. (2) HANS HOFMANN'S *Ivan der Schreckliche*. Edited by C. M. POOR. (3) HERRL'S *Agnes Bernauer*. Edited by C. VON KLENZE. (4) ANNETTE FRIEDLUND DROSTE-HULSHOFF'S *Die Judenbuche*. Edited by E. O. ECKELMANN. (5) KELLER'S *Zwei Novellen*. Edited by H. Z. KIP. (3s. net each vol. Frowde.)

As the series will be new to most of our readers, we describe it briefly. It is of American origin (hence a few spellings such as "pretense" and "theater"), the general editor being Dr. Julius Goebel, Professor of Germanic Languages in the University of Illinois. Vocabularies are given as well as notes, short and few in number. The editors are competent men, most of them teachers in Universities, their work is businesslike, and they seek not to indicate minute differences or to dwell on fine points of scholarship, but to supply in rough the information necessary for the understanding of the text. The grammars referred to are Curme's or Thomas's. In the study of a language it is sometimes well to examine short passages slowly and with careful analysis, at other times swift reading is desirable—for the rhythm, the spirit, the flow of thought.

It is to the latter purpose that these books are applicable, and teachers having fairly well advanced pupils might consult specimen copies. In (1) we have an interesting but mournful story. Fouqué's "Undine" is strangely summed up: "On his [Huldbrand, in our texts] proving faithless, she drowns him and herself with tears"! The vocabulary makes *Schaufel* masculine, and it wrongly explains *Schnarchhans* ("an utterer of loud threats," "a braggart") as "robber," "burglar." (2) "Iwan der Schreckliche"—it is the nickname of a mathematical master—is a complete novel, the matter of which is taken from school life. Of the hero's early failures to keep discipline it would be awkward to read in class. We observe that *Selbstbewusstsein* is rendered "self-consciousness," "self-esteem." But the German word never means "self-consciousness" in the ordinary English sense, and "self-esteem" we generally use reproachfully. *Selbstbewusstsein* is "a proper sense of one's own dignity." The text has "Ein tüchtiger Pädagoge muss ein überzeugtes Selbstbewusstsein besitzen"; the reader will see how impossible a rendering "self-consciousness" is. (3) Hebbel is too little studied in England. His tragedy "Agnes Bernauer"—its heroine "the modern Antigone"—is here offered with a good introduction. The notes, extremely slight, will at least not distract attention from the subject-matter. (4) The greatest poetess of Germany is represented in this series by her prose *Sittengemälde* "Die Judenbuche," an admirable specimen of an art analogous in some respects, as the editor points out, to Hawthorne's. (5) Gottfried Keller is for *Feinschmecker* in German literature; these two stories, "Die drei gerechten Kammmacher" and "Frau Regel Amrain und ihr Jüngster," will serve as an introduction to him. The notes contain some indispensable matter. We expand that on *kannengiessern* (page 102). As to the form, Grimm's article on the noun is headed *Kannengiesser*; Sanders records both *Kanngiesser* and *Kannengiesser*. A *Kannengiesser* is a tinsmith. The comedy (performed in 1722) of the Dane Holberg, translated into German as "Der politische Kannengiesser," had as its hero one Hermann von Bremen, who was both "Kannengiesser und Politicus," tinsmith and politician. It was Englished as "The Blue Apron Statesman," which means "the tradesman politician." But neither the piece nor its name took root here. On the other hand, in Germany the play was popular, and *Kannengiesser* got vogue. The meaning "toss-pot" lies near, and the word is now used for what we call a "pothouse politician," or, as the Germans say, *Bierbankpolitiker*.

A First German Book on the Direct Method. By G. T. UNGOED. (2s. 6d. Cambridge University Press.)

Mr. Ungood is a "whole hogger," only less thoroughgoing than Mr. Savory in admitting a German-English vocabulary. The readings are composed and arranged with great skill, so that the grammar lesson that follows only methodizes and tabulates what has been learnt in the text. This, at least, is the author's aim only partially attained. Thus, in the first sentence, we have "Was ist das?" not till the sixth lesson, *ich bin, du bist, er ist*, and we have not had the patience to hunt for *wer, was*. We are not criticizing, only stating the fact. A reader that consistently carried out the theory would be hopelessly dull. The grammatical summary at the end is brief and lucid. We wish it had been in the same type as the text, and we should ourselves have preferred it in English. Lessons I-II are reproduced in phonetic type.

(1) *Hadji Murad, and other Stories.* By Count LEO TOLSTOY. Edited by Dr. C. HAGBERG WRIGHT. (2s. net.) (2) *Hadji Mourad, et autres Contes.* Par LÉON TOLSTOÏ. Traduits par J. W. BIENSTOCK. (Collection Nelson, 1s. net. Nelson.)

The present reviewer does not know Russian, and cannot pronounce which is the better translation, the English or the French. As far as style is concerned, both are unexceptionable; but he cannot help remarking that it would be impossible for a botanist to identify the wild flowers enumerated on the first page. Was the flower that gives, as it were, the key to the first story a thistle or a burdock? The English translator of the title story is Mr. Aylmer Maude, and his name, with that of the general editor, is sufficient guarantee for fidelity. The stories in the two volumes are the same, but, as a make-weight to Mr. Maude's Preface, we have in the French an additional story, "Quels sont les Assassins?" Why should the French, the format of which we prefer, be half the price of the English?

The Empires of the Old World to the Fall of Rome.

By M. BRANSTON. (3s. 6d. net. Blackie.)

To give in 300 pages a history of the world, from the beginning of things down to the Fall of the Western Empire, is a bold enterprise, but the need of such an outline will be generally acknowledged, and the severest critics who pronounce Mr. Branston's "History" a failure will be grateful to him for providing a stop-gap. We have no desire to see Universal History included in the curriculum of secondary schools, as in Germany, but we agree with

the author that a knowledge of the outlines should be a recognized part of a liberal education, and the present sketch is "a framework, not a textbook for examinations." The history of Egypt and Babylonia, in the light of the latest researches, is well condensed in the first fifty pages. We are less satisfied with the primitive history of Greece and Rome. Had Mr. Branston read Miss Harrison's "Themis," reviewed on another page, we think he would have treated differently the mythology; not, for instance, have written, "Like other ancient nations (*sic*) we can trace behind all their gods and goddesses the sense of a Great God of the Sky, Maker of all things and Father of men," or been content with a list of the Latin names for Greek divinities as a sufficient account of Roman religion. The "History" is written professedly from the Christian standpoint, but there is nothing in it that could offend any sect of Christendom, not even those Christians who reject the miraculous element. Thus it is recognized that the Bible story of the Flood is in its origin Babylonian. It should have been stated that the dates of the Gospels are still *sub judice*, nor should the martyrdom of St. Paul be recounted as a historical fact no less certain than the murder of Julius Caesar; but as we said, such instances of theological bias are exceptional. The value of the volume is doubled by the numerous well chosen illustrations and the full chronological charts at the end.

Life in Shakespeare's England. By J. D. WILSON. (3s. 6d. net. Cambridge University Press.)

Without sharing George III's opinion that Shakespeare was much overrated, we may safely affirm that he is an over-written man, and the reviewer has just cause to look askance at any book with Shakespeare on the title page. All the more we welcome as an exception this latest volume of the Cambridge Anthologies, not an attempt to frame a Life of Shakespeare from the few fossil fragments that have survived, but a presentment of English life in Shakespeare's day drawn entirely from contemporary literature. It is something to have a genuine background to the central figure, to be able to visualize, not Shakespeare himself, but Sir Hugh Evans as William, Colin as Jacques, Falstaff as Master Hallow, Autolycus and Perdita with Shakespeare's eyes. Merely as a picture of social England in the sixteenth century the volume is well worth study. We have read it through and can vouch that there is not a dull page. We are grateful to the Editor not only for his selection of extracts, but for modernizing the spelling and punctuation.

Public Schools at a Glance. A Guide for Parents and Guardians in selecting a Public School for their Boys. (2s. Knowledge Organization Bureau.)

We fail to discover the *raison d'être* of this pamphlet. It gives only what is better and more fully given in more than one of the Annuals. However, the Preface shall speak for itself. "When Money looks for Opportunity, the K.O.B. can come to the assistance of parents. Specimen bureaux are shown in which schools can be graded under their intellectual and economic aspects . . . Having got the data together in convenient form, it is possible by means of one of our bureaux to grade the various public schools." We know not on what principle "public schools" have been selected; why, for instance, Merchant Taylors and the City of London are excluded and Claysmore School is included. Is the fact that Haileybury College is 32 feet above sea and Felsted 250 feet high an intellectual or economic aspect?

Exercises in English. By H. A. TREBLE. (2s. 6d. Nisbet.)

These "Exercises" are adapted for pupils taking the Locals, Senior and Junior, London Matriculation, and other examinations of the same range. Under "English" are included grammar in all its branches; "Composition," including précis, paraphrase; *Stylistik*—use of words, correction of faulty English, language of prose and verse, &c.; General Literature, not including set books. There is plenty of variety, and the questions seem to us very fair and sensible. Phonetics have not yet won a place.

Plutarch's Lives for Boys and Girls. Retold by W. H. WESTON.

With sixteen Drawings in Colour by W. RAINEY. (7s. 6d. net. Jack.)

The twelve Lives here selected—six Greek and six Roman—will give the younger generation a good idea of the most famous collection of biographies in all literature. Mr. Weston has wisely stuck to his text, omitting Plutarch's moralizings, and simplifying, but adding nothing except brief introductions to each Life to make the history plain. Mr. Rainey is an admirable draughtsman, and he excels in portraying action.

"The World's Romances."—(1) *Tristan and Iseult.* Illustrated by GILBERT JAMES. (2) *Siegfried and Kriemhild.* Illustrated by FRANK C. PAPÉ. (Each 2s. 6d. Nelson.)

Mr. Richard Sparkes has retold in simple prose two romances that all have read in the verse of Matthew Arnold and William Morris. His style is archaic but free from affectation, and he tells

the stories well, but we do not think that much is gained by dividing the narrative among several minstrels. Mr. James's figures are a little stiff, but his colours are pleasing. Mr. Papé's illustrations, somewhat in the form of illuminations, are artistic and show vivid imagination.

The Gateway to Spenser. Tales retold from "The Faërie Queene."

By EMILY UNDERDOWN. (5s. net. Nelson.)

As a story "The Faërie Queene" is a splendid failure. We read it in parts: first and foremost, for the sake of the pure poetry, then to drink in the matchless beauty of the idylls, "the light that never was on sea or land." Even Macaulay proved that he had never read the poem as a whole. Miss Underdown has done well in appending to her paraphrases, or rather prose renderings, choice extracts from the poem. Mr. Papé's illustrations are very unequal. "Duessa's Visit to Night," "Florimel at the Witch's Cottage" are beautiful; but he fails in his "Mermaids" and "The Blatant Beast." The marginal woodcuts on nearly every page add greatly to the attractions of an attractive volume.

The Country of the Blind. By H. G. WELLS. (2s. net. Nelson.)

Mr. Wells has here collected in one stout volume all his short stories written mostly in the nineties. He is a past master in what he defines as "the jolly art of making something very bright and moving" which should take at longest fifty minutes by the clock to read. The title-story is well chosen and shows at its best Mr. Wells's special gift of imagination. He sets himself as a problem "Parmi les aveugles le voyant n'est pas roi," and works it out as he would a mathematical problem.

Fragrance among Old Volumes. By BASIL ANDERTON.

(7s. 6d. net. Kegan Paul.)

Mr. Anderton's name is not unknown to our readers, one of these ten causeries having first appeared in *The Journal*. A librarian himself, he has felt—and, what is a rarer gift, conveyed to others—some of the subtle charm, the delicate bouquet, of old books. Magliabecchi, the Florentine bookman—to most of us a name, if as much—is here revived, and the title study is a charming contemporary idyll. If only for Bewick's "Bookplates" and the illustrations of "Emblems," the volume is worth its price.

The Book-Lover's Anthology. Edited by R. M. LEONARD.

(2s. Oxford University Press.)

This *Liber Librorum* is a worthy companion to the editor's "Pageant of English Poetry." Mr. Leonard has the true *flair* of a book-lover, and he has ransacked English literature from Richard de Bury down to the second Lord Lytton for the best that has been said about books in prose and verse. Living writers are excluded as well as foreign literature, an exception being made in favour of Montaigne in Florio's translation. We would gladly have exchanged Crable's "Library," which occupies seventeen pages, for a few choice extracts from Catullus, Horace, and Martial, some gems from Goethe, Lessing, and Heine, and Leslie Stephen seems to us more worthy of quotation than his father; but at such a feast of good things it is ungracious to complain that a few of our favourite dishes are absent.

Messrs. T. C. & E. C. Jack issue an important series covering much the same ground as "The University Home Library," but about half the length and at half the price. Twelve volumes will be issued each month. From the first list of sixty we choose a typical six: *Darwin*, by PROF. GARSTANG; *Science of the Stars*, by E. W. MAUNDER; *Buddhism*, by PROF. RHYS DAVIDS; *Women's Suffrage*, by MRS. FAWCETT; *Shakespeare*, by PROF. HERFORD; *Geology*, by PROF. BONNEY.

LONDON MEETING OF SECONDARY TEACHERS.

THIS meeting, organized by the various associations of secondary teachers, was held on the afternoon of Saturday, March 23, at the University of London. In spite of the bad weather and defective train service, there was a good attendance, women teachers, as is usual, predominating. The chair was taken by the Rev. the Hon. E. Lyttelton, supported by the Right. Hon. A. H. Dyke Acland.

The CHAIRMAN, in welcoming the meeting, said that it was a fulfilment of the expectation that the Manchester meeting, one of the most enthusiastic gatherings it had ever been his privilege to attend, had raised—that it would not be long before the secondary teachers met in London and showed likewise their determination to organize themselves and help to form a united profession.

As to the second of the two great subjects on the agenda paper, they had the definite promise of a Teachers' Registration Council, and, as

to the first, the way towards National Insurance of Teachers had been paved by prolonged investigations and delicate negotiations, and he believed they were within reach of the goal. But they must not disguise the fact that there were difficulties ahead—so acute that the profession would be put on its mettle to show its sincerity, especially in the matter of the Register. A profession divided against itself could not stand, and there were dangers of conflicting interests and disruption. It behoved teachers to show their disinterestedness and their statesmanship. He had much pleasure in introducing a statesman who had borne the burden and heat of the day.

Mr. ACLAND acknowledged the high honour that had been paid him in inviting him to address this great meeting of teachers, presumably because he had acted as Chairman of the Joint Committee on Pensions, whose report would be presented to the Board of Education next week. This meeting indicated a vast step in advance towards professional solidarity. It showed that teachers could now approach the State as a united body, and he noted that all three resolutions were addressed to the State. The conviction had been slowly borne in on teachers that the unity they desired could not be obtained without the assistance of the State. The advice he would press upon them was: federate, consolidate, and educate—not themselves or their pupils, but the public. The past had shown them the futility of isolated effort. It was forty years since Mr. W. E. Forster brought in a Registration Bill, but the House of Commons cared nothing for such things. It was a symptom of this indifference that, when lately the salaries of the Presidents of the Board of Trade and the Local Government Board had been raised (and deservedly raised) to £5,000, that of the President of the Board of Education was left at £2,000 without a single protest in the House. They must hammer the public and hammer the official mind, or their path would be strewn with disillusion as his had been.

A Retrospect.

It had lately been pressed in on him that all workers should retire at sixty-five. He was himself approaching that fatal age, and he noted that every self-respecting official wrote his reminiscences. Instead of writing them he was going to inflict them on his audience to-day. His first memory was the Schools Inquiry Commission, on which both his father and Mr. Lyttelton's father had sat. There could be little dispute that the most effective member of that Commission was the late Archbishop of Canterbury, and he remembered as a Rugby boy that, if ever Temple was absent from first school, it was whispered: "He's off again to the Commission." Nearly twenty years later, as an M.P., he had fondly thought that they were on the brink of realizing the organization of secondary schools. At that time endowed schools and private schools were considered a sufficient supply, though in the whole country there were only thirteen endowed girls' schools. Whitehall, South Kensington, and the Charity Commission were all separate departments with no connexion. Then came, in his last Special Report on Free Schools, Matthew Arnold's trumpet-call, "Organize your Secondary Education," and the keen satire of "Friendship's Garland." Who that had read it could forget the visit of Arminius to Eton? Three years after (in 1888) as a private Member he had brought in an Education Bill, seconded by Mr. John Morley, but nothing came of it. It was true that in this decade three educational measures were passed, the County Councils Bill, the Technical Instruction Bill, and the Welsh Intermediate Education Bill. The last was a pure accident. Mr. Gladstone had been absent from the House when Welsh Disestablishment was moved. He was told that his absence had given great offence to Welsh Members, and this Bill was thrown to them as a sop. The Whisky Money, which now brought in nearly a million year for secondary education, was obtained by a similar fluke. He had moved an amendment asking for half of the surplus to be earmarked for endowed schools. Mr. W. H. Smith refused to accept the amendment, and a friend whispered in his ear, "Ask for the whole." The Government, eager to bring the session to end, accepted his second amendment.

In 1902 he became a Minister himself, and then began his real time of disillusionment. By no effort on his part was it possible to obtain one shred of legislation on education. He was forced to stretch the meaning of technical instruction till it included every subject except Greek. He got rid of the majors and captains who had up till then conducted the Science and Art Examinations. He managed to get into one room for a departmental Committee representatives of Whitehall, South Kensington, and the Charity Commission. And as the last resource of an embarrassed Minister he appointed a Royal Commission, the first on which a woman had ever sat. Though that Commission bore no immediate fruit in legislation, yet he believed that it served its purpose in paving the way. Then followed seven long dreary years before the Act was passed, which gave us the power of organizing secondary education.

Prospects.

In spite of delays and disappointments, his retrospect of State action was not altogether unsatisfactory. The inspectorial work of the Board of Education as regards secondary schools deserved their respect and

gratitude. As he compared his first and his last visit to Whitehall, he was impressed by the entire change of temper and attitude in the Board's officials. On the first occasion he was graciously received by the Permanent Secretary, who possessed, in a supreme degree, the Treasury art of baffling the inquirer, and, after half an hour's interview, he came away no wiser than he went. Last week, as Chairman of the English Association, he was asked to attend to assist the Board in framing suggestions on the teaching of English, and five members of the Association had sat at a round table with five Inspectors and taken counsel together.

There was still much to be done. The Act of 1902 was not compulsory, and voluntary action could not be trusted. As to the resolutions, his advice was to press them home and not let the grass grow under their feet. Salaries were wholly inadequate, and the gap between the salary of the Head and the first or second member of his staff (often a better teacher than the Head) was far too big. They must fight for freedom from the incubus of examinations. It was not the great public schools, but the smaller endowed and grammar schools, that suffered most. They must fight against the terrible commercialism that gauged the worth of a school by its examination successes. Oxford and Cambridge encouraged the pernicious system. They enabled a school to advertise the proud fact that one of its pupils was fourth in all England in book-keeping and eighth in religious knowledge. At the end of the fifteenth and the beginning of the sixteenth centuries there were many famous scholars and savants, but not one of them possessed a diploma or could write B.Sc. after his name.

Pensions.

The first resolution was moved by the DEAN OF LINCOLN:

"That this meeting desires to express its appreciation of the favourable consideration shown by the Board of Education to the question of starting a National Pension scheme for secondary teachers, and earnestly hopes that the joint efforts of the Board and of secondary teachers towards this end may be completely successful."

Dr. FRY said that the head masters had done all they could to help their colleagues, but, except in a few richly endowed schools like Birmingham, which could devote £1,000 a year to a pension fund, the money was not forthcoming. Paper 5951 showed that in recognized schools the average salary for men was £168 and for women £123, and these salaries did not carry pensions. Half the masters in England earned about half of what a capable miner earns. Governing bodies were too poor, and Local Authorities (except in six areas) had no power to grant pensions. They must look to the State. Mecklenburg-Schwerin and Mecklenburg-Sterlitz were the only parts of Germany in which teachers were unpensioned.

Mr. RAWLINSON seconded. He said that, by the Scotch Pension Scheme, teachers contributed four-tenths, and the remaining six-tenths was contributed by the Local Authority and the State. The Joint Committee aimed at obtaining for men at the age of sixty a pension of £100 a year, and for women at the age of fifty-five a pension of £65.

The resolution was supported by Miss LEES (Assistant Mistresses) and Mr. A. A. SOMERVILLE (Assistant Masters).

Registration Council.

The second resolution was proposed by Dr. McCURE:—

"That this meeting heartily welcomes the announcements recently made by the President of the Board of Education with regard to the appointment of the Teachers' Registration Council, and the financial arrangements in connexion therewith; and is of opinion that the formation of an adequate Register of Teachers is of vital importance to the best interests of the teaching profession."

Dr. McCure said they were deeply grateful to Mr. Pease for the pains he had taken to understand the wishes of teachers and his promptitude in giving them effect. The Order in Council embodied the scheme submitted by the Conference of Teachers on November 13, 1909, with the sole difference that eleven University members were assigned to the Council instead of being co-opted. The financial arrangements had also been framed by a Committee of Teachers, embodied in a memorandum signed by Sir James Yoxall, Mr. Lyttelton, and others, and adopted *en bloc* by the President. By it the balance of £2,800 left by the old Council would be handed over to the new Council without any liability in respect of returned fees, and the Treasury engages, with proper safeguards, to finance the new Council for the next three years. The principle of the clean slate must in every respect be applied. It was a challenge to the whole profession. A representative Council had been created which would have much to say, at first as regards registration, but eventually as regards guidance and, he ventured to prophesy, inspiration. This was a dream, but he had never known a great work accomplished which did not begin in a dream.

The resolution was seconded by Mrs. WOODHOUSE (Head Mistresses) and supported by Mr. S. E. WINBOLT (Assistant Masters).

Freedom of Schools.

The third resolution was proposed by Mr. R. F. CHOLMELEY (Head Masters), seconded by Dr. SOPHIE BRYANT, and supported by Miss DOUGLAS (Head Mistresses):—

"That this meeting is of opinion that, in guiding the future development of our educational system, the State should ensure to the schools the fullest degree of freedom, especially in the essential matters of curricula and other internal organization."

A vote of thanks to the Chairman and Mr. Acland, proposed by Canon SWALLOW and seconded by Mr. T. E. PAGE, ended the proceedings.

UNIVERSITIES AND SCHOOLS.

LONDON.

Last month was one of the most exciting in the history of London University. The hunt started with the announcement of a gift of £100,000 from an anonymous friend of the University, and a contribution towards the cost of acquiring the vacant site behind the British Museum for a new headquarters buildings. This was followed by an offer of £60,000 from the Drapers' Company for a new Senate House and Administrative Offices, not necessarily on the British Museum site; and a little later by an offer of £25,000 from the Duke of Bedford and a reduction of £50,000 off the price of the site. Finally, Sir Francis Trippel, who holds an option from the Duke for the site, has undertaken to raise £1,000,000 for the erection of such new headquarters for the University as will be worthy of the Capital of the Empire.

Subject to the usual caveat against the dangers of vast expenditure on bricks and mortar unless adequate provision is also made for the salaries of teachers and for maintenance, we welcome these important announcements most cordially. But there is, unhappily, a worm in the bud. The Senate of the University has apparently not established altogether friendly relations with the Royal Commission on University Education in London, through whose Chairman, Lord Haldane, these munificent offers have been announced. This is a long story which cannot be discussed here. The immediate difficulty arises from the fact that important negotiations for removing the head-quarters of the University were entered upon without any previous consultation with the Senate, the body responsible in this matter both to the Government and to the members of the University. Lord Rosebery's action in the matter has been sharply criticized, for without any authority from the Senate his name has been published as the representative of the University on the Board of Trustees, which is being formed in connexion with the scheme. It is obvious that his membership of the Board in that capacity would suggest to the public that the scheme had already received the official approval of the University. Some protest on the part of the Senate was obviously needed, though we have no doubt that the Chancellor intended to act in the best interests of the University. The prospect of obtaining in London a dignified group of academic buildings which could be used for educational conferences and great academic meetings of all kinds, will give great satisfaction both for the sake of the University and on wider considerations, and we trust that the scheme will receive further generous support from "magnificent citizens."

Another piece of good news comes to the University from the London County Council, which has offered to grant an additional £28,000 to the University during the next three years, to be used for various purposes. This action suggests that the Local Education Authority of London is prepared to take as serious a view of its responsibilities to its local University as the municipalities of Birmingham, Manchester, Bristol and other University towns. In the discussion of the grants at the Education Committee, the external student found a new champion in Mr. A. A. Thomas, who seems to suppose that, on account of the Royal Commission, the external student is in danger of extinction. On this question we can only say that the Commission is supposed to be of a judicial character, and that the evidence so far published establishes no very powerful case for the abolition of the external system. It does not follow, of course, that the system should not be modified so as to induce external students, as far as possible, to obtain proper tuition and in order also to exercise some supervision over their studies. The Education Committee wisely decided to await the result of the Commission's deliberations on this vexed question.

OXFORD.

The Finance Board Statute, whose fate was in doubt when last I wrote, passed Convocation on March 5, by a large majority. The legal objections of the President of Corpus have been answered and it proved in debate that his case depended on the argument that, if the University demanded that college accounts should be

published in a form in any way different from that in which they are already published, it would by so doing interfere with the colleges in an unwarrantable and illegal way. Such an argument, it was felt, proved too much.

The Faculties Statute, which had been withdrawn because of the President's objections to it on legal grounds, is to be recommitted next term. Council held that a clause in it giving the University power to modify the statute freely in the future was not legal, but that apart from this there was no objection to the Statute and it should pass next term. The remaining parts of the Council's program for Reform from within are concerned with the problem of poor students and the constitution and powers of Congregation and Convocation. The former of these, perhaps the most important problem in University Reform, was not very satisfactorily treated either in the Chancellor's letter or in the Council's report. It is hoped that the experience of the Tutorial Classes Committee, whose work both in tutorial classes and in the summer classes has met with such conspicuous success, will be of service here. The strength of the Tutorial Classes Committee is that it includes representatives of working class organizations on it and has been able to learn something of the working class attitude to University education at first hand.

Council's proposals for the reform of Congregation and Convocation are not yet announced, but it does not seem likely that anything very much will be done to cure their two great defects, that Congregation is not now confined to the teaching members of the University and that Convocation as a voting body does not really represent the University at large. Its votes represent only the verdict of those who can easily come up to Oxford. One reform which should have an important effect on its composition is again ext. It is proposed that the fees for the B.A. and M.A., which are now £7 10s. and £12 respectively, shall be lowered to £6 and £2, and to make up the financial loss to the University that the undergraduate dues should be raised from 12s. 6d. to £1. The change, if effected, will certainly have the effect of making a much larger number take the M.A. and keep their names on the books.

The decree to give £300 a year for three years to the Delegacy for the Training of Secondary Teachers, which I mentioned last time, passed Convocation on March 12. The decree was opposed, but the decisive majority by which it was passed and the debate showed that most members of Congregation recognized the great value of the work done by the Delegacy, and were unwilling that it should not be given a chance of profiting by the more favourable prospects implied in the Government's decision about the Teachers' Register.

Reforms in the Faculty of Theology are foreshadowed following the lines of those already announced at Cambridge, by which theological degrees are no longer to be confined to members of the Church of England. Similar proposals, when last brought forward, roused the *odium theologicum* in its worst form. We hope that the liberal-mindedness of the new Professor of Divinity and his colleagues in the Theological Faculty will this time meet with more success.

The Coal Strike has produced much misguided enthusiasm. The author of a pleasant, if not very profound, social play produced at the Theatre, responded to the calls of "Author" by calling upon Oxford to save the nation, and promising to show how it could be done next morning at Trinity. The next day he presided over a large meeting, where he proposed that undergraduates should go and dig coal, and so end the strike. All practical objections he waived aside as theological and academic, and moved that meetings should be organized that evening in all the colleges to carry out his proposals. When the evening came the proposals for coal-digging had receded into the background and undergraduates were now called upon to act as amateur policemen. At most colleges it was resolved that undergraduates should wait to offer their services till they were called for, and the political clubs of all parties condemned it; but, in spite of opposition and a great deal of ridicule, an Oxford Strike Emergency Committee has been established. It has betrayed its nature by being established at the office of the Anti-Socialist Union, and has become one of the many non-party objects directed by that impartial body. The best part of the proposal was that the necessary work of renewing the props in coal mines should be done by these enthusiastic students. This would indeed add a new terror to coal mining.

An interesting new departure was recorded on Wednesday, February 21, when members of the Somerville College Political Debating Society were invited by the Arnold Society of Balliol College (a well-known discussion society of long standing), to join formally in the debate which they had arranged on the subject of women's suffrage. The experiment was entirely successful, the subject being discussed with uniform seriousness and the greatest vigour and enthusiasm. The terms of the motion were as follows:—"That

this House is resolved that, in matters of franchise, no distinctions should be made between man and woman"; and 112 votes were cast, 86 for the motion, and 26 against—a very handsome majority.

As long as the women students are unable to become members of the University, though they are admitted to the examinations, and practically to all the academic instruction which they require, it is particularly to be desired that such civility and recognition as the Arnold Society were happily inspired to offer them, should be encouraged, and repeated when a convenient opportunity offers.

Colleges and Scholarship Elections.—It appears by the announcements of scholarship election that there will be a crowd of elections in the last week of Michaelmas Term. This is an old difficulty; and for many years attempts were made by meetings and negotiations not to leave the date of scholarship examinations to the several colleges (who, of course, are omnipotent if they choose to be so), but to get some arrangement by consent whereby a more convenient and varying date for each college scholarship examination could be secured. The result was that in the long run no one was really satisfied, and it had in the end to be left to each college to fix dates of examination and election. The present system of crowding many scholarship examinations into the last few days of October Term has one regrettable result, that a boy who misses his scholarship in his first examination cannot secure a second try elsewhere, because the other colleges are examining all in the same week. Possibly some solution will in time be developed, which will be at any rate approximately satisfactory. But at present there seem to be difficulties still calling for reform; and somehow the call is not yet answered—or, at any rate, not adequately and finally answered.

Appointments by the Hebdomadal Council on February 12.—D. S. Margoliouth, Professor of Arabic, M.A., D.Litt., Fellow of New College, to represent the University of Oxford at the seventy-fifth Anniversary of the Foundation of the National University of Greece, to be held at Athens, on April 7, 1912. The following were appointed Electors to the Professorships mentioned, viz.:—M. J. M. Hill, Doctor of Science, Cambridge, Professor of Mathematics in London University, to be an Elector to the Savilian Professorship of Geometry. A. A. Rambaut, Radcliffe Observer, to be an Elector to the Savilian Professorship of Astronomy. Sir J. J. Thomson, Hon. D.Sc., F.R.S., Fellow of Trinity College, Cambridge, to be an Elector to the Wykeham Professorship of Physics. Sir H. A. Miers, M.A., D.Sc., Principal of London University, to be an Elector to the Professorship of Geology. G. C. Bourne, D.Sc., Linacre Professor of Comparative Anatomy, to be an Elector (subject to Clauses 5 and 6 of the Statute) to the Professorship of Geology. A. Thomson, Professor of Human Anatomy, to be an Elector to the Linacre Professorship of Comparative Anatomy. F. Gotch, Waynflete Professor of Physiology, to be an Elector (1) to the Professorship of Human Anatomy, (2) to the Professorship of Pathology. C. W. M. Moullin, D.M., to be an Elector to the Professorship of Human Anatomy. A. E. Garrod, D.M., to be Elector to the Professorship of Pathology.

Deaths.—Rev. J. D. Kelly, M.A., formerly scholar of Wadham, Canon Residentiary of Manchester, and Sub-Dean of the Cathedral, died at Manchester, February 26, aged eighty-three. T. Mackay, M.A., of New College, formerly Commoner, died at Kensington, February 23, aged sixty-two. J. Troutbeck, B.C.L. and M.A., of Queen's, Coroner and Deputy High Bailiff of Westminster, formerly Commoner of the College, died at Westminster on February 29, aged fifty-one. P. F. Willert, M.A., and Hon. Fellow of Exeter, formerly Fellow (1867-1881), and late Tutorial Fellow (1882-1894) of the College, died March 4, at Valescure, aged sixty-six. Rev. Francis Harrison, M.A., of Oriel, Honorary Fellow and forty-two years rector of North Wraxhall, Wilts, died at Bath, March 10, aged eighty-two. T. H. Tristram, D.C.L., K.C., of Lincoln, Crewian Exhibitioner, Boden Sanskrit Scholar (1848), Chancellor of Dioceses of London, Hereford, Wakefield, Ripon, and Chester, Commissary of the City and Diocese of Canterbury, died on March 8, aged eighty-six. Rev. C. H. Moreland, M.A., late Scholar of Lincoln, Head Master of Christ's College, Christchurch, New Zealand, died on March 10, age not stated.

WALES.

A few pages of the recently published Report of the Board of

Report of the
Board
of Education.

Education contain special references to secondary and elementary education in Wales. The Welsh Department appears to be seriously concerned with the problem of the future supply of teachers for the Welsh elementary schools. In the previous Report of the Board it was shown that the gradual change from the old pupil-teacher system to the newer Bursar system had been markedly checked. This check continues, for the number of Bursars recognized in Welsh secondary schools has dropped in an

alarming manner from 353 in 1909-10 to 194 for 1911-12. The Board explains this serious decrease by the frequency of the failures of the Bursars to pass either the Preliminary Certificate Examination, or, in the case of candidates from the intermediate schools, of the Senior Certificate of the Central Welsh Board. These failures have apparently discredited the newer system of Bursarship, especially in some areas. There has, however, been no appreciable return to the older system, the number of pupil teachers employed in Wales showing if anything a decrease. The Board has no remedy to suggest, and it leaves the Local Education Authorities to suggest one. Most probably, the true explanation for the gradual disappearance of the Bursar is to be traced to the conditions of service in the teaching profession in the Welsh elementary schools. Boys and girls of good attainments who could pass these qualifying examinations with ease, appear to avoid elementary school work and to prefer to enter on some other career which will give more scope to their abilities and better salaries. There will surely be no marked increase in the number of candidates until the profession is made more attractive in many ways.

The references to the Welsh intermediate schools are very slight. The Welsh Department still appears to take pride in its famous criticisms of the schools, for it claims unblushingly that it is as the result of its reports that "new life has been infused into many of the schools, whilst in others much has been done to adapt the curriculum more perfectly to the needs of the localities and to introduce and make possible more modern methods of teaching." This declaration, however, justifies us in looking forward with confidence that the next report of the Department will be less critical in character, and more sympathetic in its attitude towards the schools.

The Swansea schools case figured somewhat largely in Parliament during a discussion on the Civil Service estimates. Lord Robert Cecil made a vigorous onslaught on the Swansea Education Authority for having differentiated between the scale of salaries for teachers in provided and non-provided schools, and he reviewed fairly exhaustively all the well known facts in connexion with this question. He did not seem to be aware that this particular Authority had already resolved to place all its teachers on the same scale and so reversed the previous policy of the Council. The Glamorgan County Council has also recently determined to deal on their merits with any applications by the managers of certain specified non-provided schools for increased amounts to pay the salaries of their staff, though the Committee will have to take into consideration the question whether the managers will allow, and the teachers will agree, that they shall be bound to observe and comply with the Committee's regulations. The County Council, however, will still persist in exercising its powers with regard to structural alterations in non-provided schools. The Revolt policy is now practically dead throughout the Principality and there is much jubilation among the teachers.

On the invitation of the Swansea Town Council, Mr. Alfred J. Davies, the Permanent Secretary of the Welsh Department, addressed an influential and representative meeting at the Guildhall, Swansea, on the position of Art in Wales. The carefully compiled statistics which he had prepared from official documents proved that hitherto the position of arts and crafts in Wales was most unsatisfactory, and that there were but few opportunities available for young Welshmen who possessed artistic talents to develop them. Swansea with its Glynn-Vivian Art Gallery and its Deffert-Francis collection of prints—some of the latter of priceless value—had a unique chance of becoming the Art Centre for Wales, and Mr. Davies strongly urged the Local Authority to do everything in its power to make this possible. Swansea has so far been most unfortunate in its attempts to secure one of our National Institutions and naturally feeling is rather sore at this persistent neglect of the town. The movement for creating a great Art Centre for Wales deserves every encouragement, however, quite apart from local feeling and considerations, and so we sincerely hope that the efforts of this great industrial centre in this direction will be crowned with full success.

The proposals of the Welsh National Insurance Commissioners with regard to filling appointments have naturally attracted a great deal of attention. Questions have even been asked in Parliament about them. There has no doubt been much misapprehension about the scheme outlined by the Commissioners and more careful study of its details might have avoided some ridiculous criticisms. There was, for instance, no intention to confine the competition to candidates from the intermediate schools and the University colleges, for it was proposed that equivalent examinations would be accepted in lieu of the examinations by the Central Welsh Board and of the Uni-

versity. There would, therefore, be given full opportunity to compete to all who were properly qualified. It was probably in order to save unnecessary examination expenses, as much as to secure a proper standard of efficiency, that the Commissioners were induced to insist on a certain minimum standard of attainment in all the competitors for appointments. The details will be finally settled by the Treasury and at present, therefore, all is mere guess-work as regards the conditions.

We regret to have to record the death, with tragic suddenness, of Mr. Edward Roberts, M.A., late H.M. Inspector of Schools for the Counties of Carnarvon and Anglesey. Mr. Roberts commenced as a Sub-Inspector in these counties, and on the retirement of Mr. Watts was promoted to the full charge of the district. He had the reputation of being most sympathetic and genial in his dealings with the teachers and their difficulties, and during his life-long association with elementary education in North Wales, he had contributed greatly to its development.

**Death of
Mr. Ed. Roberts,
late H.M.I.**

SCOTLAND.

In the annual report of the Carnegie Trust the most important new announcement is that the Trustees have resolved to give some assistance in the provision of hostels for University students. The Trust is unable to give any money for hostels, as its funds "are now, and must for long be, required to meet the purpose to which they have already been devoted." But the Trust has accumulated out of surplus income a reserve fund of about £140,000, and the Trustees are willing to assist in the erection of hostels by making loans from this fund at a very moderate rate of interest, on the security of the land and buildings erected upon it. One of the main difficulties in the founding of hostels is the provision of the initial capital, and the action of the Carnegie Trust will therefore be most valuable. The Trust has also made a change in the regulations for the payment of class fees. The Leaving Certificate of the Scottish Education Department must be held by all applicants who have had an opportunity of gaining it as pupils of Scottish schools. This raises the standard of qualification, for it excludes applicants who, having failed to gain the Certificate, qualify afterwards by means of the University Preliminary Examination. The expenditure on class fees during the year exceeded the available income by nearly £700, and the raising of the standard of qualification is thus justified. The report also shows that the work done under the scheme of endowment of post-graduate study and research maintains the high level of former years. The Trust has now been in existence for ten years, and in course of that time its total income has been over £1,000,000, of which £63,546 was expended on research, £368,288 in grants to Universities and colleges, and £445,373 in the payment of fees for 11,480 individual students. The cost of administration has been 2.8 per cent. of the income of the Trust.

St. Andrews University Court has sympathetically received, from a deputation representing the Church of Scotland and the United Free Church, a suggestion that a course of lectures in Hellenistic Greek should be instituted in the University. A junior course in Greek, for students who have not passed the Preliminary Examination in that subject, has already been instituted in the University. The teaching of Greek has considerably declined in the schools, and the junior course is intended to meet the wants of students who have had no opportunity of learning Greek at school. Similar proposals are under consideration at Glasgow University; but there is difference of opinion as to the policy of reviving a junior class. It is contended that such a class will accelerate the dropping of Greek in the schools, as it will be said that any scholars who desire it will be able to get it at the University. It is, however, generally agreed that a course in Hellenistic Greek will be valuable. The prize of £21 given by the Chancellor of St. Andrews University (Lord Balfour of Burleigh) for an essay on "Alexander Henderson, the Covenanter," has been awarded to Mr. James Pringle Thomson, M.A., Edinburgh. The competition was open to graduates of not more than ten years' standing.

At a meeting of Aberdeen University Court, Prof. Hay, Convener of the Finance Committee, submitted the accounts for last academic year, which showed that the surplus revenue on the General Fund was only £289, as compared with £1,568 in the preceding year, and £2,620 in 1908-9. He indicated that in a year or two a deficit might be expected, and this in spite of the absence of any notable reduction in the number of students. The falling off in revenue was due to several causes, including a diminished revenue from graduation fees, and especially a lessened income from class fees brought about by the new Ordinance in Arts substituting a three-term course for a two-term course without additional charge.

The late Mr. John Thomson, of the Aberdeen University Press (limited), has bequeathed £2,000 to Aberdeen University for the purpose of endowing a lectureship on "the Structure and Functions of the Human Body," the lectures to be given by a member of the University teaching staff and to be open to the public.

Lord Lister has bequeathed to Edinburgh University the insignia of his various orders, his medals, diplomas, &c. received from learned societies, and various honorary gifts and distinctions, including his portrait. The University Court has appointed Mr. Hector Burn-Murdoch to be Lecturer in English Law. Edinburgh and Aberdeen Universities are each pressing strongly its claims for the chair of Forestry which it is proposed to establish in one of the Scottish Universities.

The Franco-Scottish Society's bursaries have been awarded to Miss Susan C. Leveck, Edinburgh University, and Mr. William Amour, Glasgow University.

As was anticipated in this letter last month, the Provincial Committees have agreed that alternative curricula should be provided for the new four years' course for University students, and that in one curriculum the first three years should be devoted mainly to University work and the last year mainly to professional training, while in the other curriculum the professional training should be mainly given in the first two years, the University studies being taken mainly in the last two years.

IRELAND.

A lively discussion took place at the meeting of the Meath County Council at the end of last month on the subject of University Scholarships. The scheme which was before the meeting provided for five scholarships of £50 each, tenable for three years at one of the constituent colleges of the National University and open to students of either sex and of any creed whose parents or guardians were resident in Meath and whose means were insufficient, in the judgment of the Finance Committee, to provide them with a University education; Irish being a compulsory subject in the special examination held for the purpose of awarding the scholarships. A special clause allowing students who might object to the National University to select another was, after considerable discussion, rejected; its opponents basing their action on the ground that the question was not one between a Roman Catholic and a Protestant University, but between a national and democratic institution beginning its career and an aristocratic one long established and amply endowed.

At their monthly meeting on March 4, the Dublin Corporation had under consideration a scheme for scholarships drawn up by a special committee appointed for that purpose. The scheme, which was approved by the meeting, recommended the formation of twenty-four scholarships of £40 each, and also the creation of chairs or lectureships for Irish music and for the teaching of municipal history and law in the National University. The scholarships, it was expressly stated, would be tenable in Trinity College, provided it followed the example of the National University in making Irish a compulsory subject at some stage of its course. As there is not, at present, the least probability of such an event, the scholarships are practically confined to the National University.

The action of the Meath Council formed the subject of a question put to the Chief Secretary by Sir John Lonsdale on March 7, who brought it forward as an example of religious intolerance. Mr. Birrell in his reply, while stating that all the Universities in Ireland were equally unsectarian, deprecated the action of the County Councils in drawing invidious distinctions between them; a policy which would seriously interfere with the successful working of a scheme which he hoped to carry out—whereby pupils of primary schools would be enabled to pass to secondary ones and ultimately to compete for County scholarships at the Universities.

Political and social cleavage has always been far deeper in Ireland than religious cleavage, notwithstanding the commonly expressed views to the contrary; that this is the case with regard to Trinity College was shown by the hostile attitude assumed towards it by a large section of the northern Presbyterians at the time when the settlement of the University question was still under debate. To them Trinity College stood as the embodiment of an aristocratic and outworn class ascendancy. To the average Roman Catholic Nationalist it stands as the centre of "Anglicizing" forces and the traditional enemy of national aspirations; and that there is some ground for this feeling has been proved on many occasions, notably by the antagonistic or (still worse) supercilious spirit displayed by some of its representatives towards the Irish Language Movement in its earlier stages. But there are plenty of signs to-day that the older University has benefited by having to enter into competition with two younger rivals and that the new Spirit of the Age has already penetrated within her

boundaries and is working actively, if silently, there. Certainly the charge of being "aristocratic" can no longer be fairly brought against her, for the aristocrats of Ireland, Catholic as well as Protestant, generally send their sons to the English Universities, and the scale of fees in Trinity, if higher than that of the National, is at any rate moderate enough to bring it within the scope of any who have sufficient abilities to avail themselves of its numerous scholarships and sizarships. It is curious, by the way, to observe how under the apparent hostility of the Irish Catholic of the west and south, who is by temperament an aristocrat and a conservative, there is often to be found a feeling of respect for the older University and a kind of national pride in her history and reputation, which is not inspired by newer foundations and which is wholly lacking in the more practical and democratic mind of the North.

Mr. Birrell's statement that the Irish Universities are unsectarian is in all essential respects true; there is a considerable number of Roman Catholic students in Trinity, as of Protestants in the National University, while the latter has as yet no theological Faculty identified with any Church and the proportion of Protestants on its teaching staff is beyond what might have been expected. As for the other ground of difference between the two Universities, the Irish language, that is a question which time alone will settle. If the Irish Language Revival is, as many of its opponents assert, an artificial movement which aims at keeping a moribund language alive in the midst of a people who no longer want it, then evolution, it may safely be predicted, will prove stronger than the revivalists and the next generation will see Irish dropped as a compulsory subject for University matriculations or County Council Scholarships. If on the other hand there is life in the movement and it expresses a real aspiration of the Irish people, Trinity College will no doubt within that period adapt its curricula to new national needs as it is already doing in many other particulars. At present, "compulsory Irish" in Trinity would be a premature step and one scarcely in the interests of its students as a body.

The Central Association of Irish Schoolmistresses has addressed a statement to the Chief Secretary containing suggestions for a scheme of registration for secondary teachers in Ireland. The scheme, which was drawn up by a sub-committee appointed for the purpose and specially qualified to deal with the subject, after making provision for the registration of existing teachers, recommends that after 1917 the qualifications for admission to the register shall be: (a) a University degree or an equivalent, e.g. in the case of a modern language teacher, two years study abroad followed by an approved examination in the language studied; in the case of a science student, the diploma, in certain courses, of the Royal College of Science, Ireland. (b) A recognized teaching diploma following a training course of not less than one year, e.g. the diploma of Trinity College or the National University. (c) Probationary experience of at least one year as full-time teacher in a recognized secondary school, subject to satisfactory reports from recognized authorities. The sub-committee is of opinion that the formation and custody of the register of secondary teachers properly belongs to the Board of Intermediate Education.

The Stokes Memorial Lectures were delivered on March 12, 14, and 15 at Alexandra College by Mr. Alfred Perceval Graves, M.A., the well known writer, who chose as his subject the great Irish archaeologist, George Petrie. Special features of the course were musical illustrations of the lecture dealing with Petrie as a Folk Song Collector, an exhibition of limelight views by Mr. Francis Biggar of Belfast to illustrate Petrie's work as an archaeologist, and a special Petrie collection organized at the National Museum in connexion with the course.

The final lecture of the course organized by the Classical Association of Ireland last winter was delivered in the National University, on February 29, by the Rev. P. Boylan, M.A., Professor of Eastern Languages in University College, Dublin, on "Aegean Art."

"Language Week" began on Sunday, March 17 (St. Patrick's Day), when meetings were held and collections made throughout the country on behalf of the work of the Gaelic League.

SCHOOLS.

CLIFTON COLLEGE.—The Jubilee has been fixed for the week ending July 13. On Thursday there will be a field day, at which Sir Douglas Haig (O.C.), now in command at Aldershot, with a staff of O.C. officers, will act as umpire. On Friday and Saturday there will be the usual cricket matches against O.C.'s. At the Commemorative Service on Saturday the preacher will be the Bishop of Hereford; in the afternoon the prizes will be given by Lord Haldane, and Mr. Sydney Buxton will attend the O.C.

Supper in Big School. The four ex-head masters of Clifton, Dr. Percival, Canon Wilson, Canon Glazebrook, and Dr. David will all be present and take part in the proceedings.

HAILEYBURY COLLEGE.—The Jubilee of the School has been fixed for Friday and Saturday, July 5 and 6. Program to follow.

ACTON COUNTY SCHOOL.—W. H. Wilson (Division I) and J. Scroggie (Division II) have passed the London Matriculation, January 1912. In the same list appeared the name of E. Bevan (O.A.). H. Guisbary has been awarded the First Science Scholarship (£50) at Downing College. Mr. J. B. Houseman, B.Sc. (Hons.), has taken the place of Mr. H. Matthews, who has gone to Halesowen Grammar School. Since last December a play ("Company for George"), a concert, and a gymnastic display have been given by the School. A. H. Dolphin (O.A.) has published a small volume of poems. The cadets have obtained the use of a convenient rifle range.

PRIZE COMPETITIONS.

THE winner of the Translation Prize for February is Mr. P. O. Macdonald, Glencoe, Frinton-on-Sea.

Il n'était pas besoin de cette profession de foi pour deviner chez lui la passion du mot pittoresque et de la phrase bien nommée. Certains morceaux de facture sont à eux seuls un *credo* littéraire. Je choisis dans *Au Soleil* cette description, un lever de la lune au bord d'un lac de sel : "La pleine lune emplissait l'espace d'une clarté luisante qui semblait venir tout ce qu'elle frôlait. Les montagnes, jaunes déjà sous le soleil, les sables jaunes, l'horizon jaune semblaient plus jaunes encore, caressés par la lueur safranée de l'astre. Là-bas, devant moi le Zar'z, le vaste lac de sel figé, semblait incandescent. On eût dit qu'une phosphorescence fantastique s'en dégageait, flottant au-dessus, une brume lumineuse de féerie, quelque chose de surnaturel, de si doux, de si captivant le regard et la pensée, que je restai plus d'une heure à regarder, ne pouvant me résoudre à fermer les yeux. Et partout, autour de

moi, éclatant aussi sous la caresse de la lune, les burnous des Arabes endormis semblaient d'énormes flocons de neige tombés là." J'imagine qu'un professeur de rhétorique moderne, comme Sainte-Beuve s'est amusé à l'être dans quelques passages de son *Chateaubriand*, donnerait de cette page un bien curieux commentaire. Il montrerait la recherche d'harmonie imitative de ce "tombés là" qui termine sur une sonorité sourde cette phrase d'abord légère et vibrante comme un rayon de lune, l'alanguissement que donne à la période cette incorrection volontaire : "de si captivant le regard et la pensée." Une fois entraîné par la doctrine qui veut que le style soit l'équivalent complet, le substitut intégral de la sensation, à quel scrupule de détail n'arrive-t-on pas ! Poussée à l'extrême, la logique du style d'images doit en effet aboutir à des recherches de cet ordre, de même que la logique du style d'idées conduisit Stendhal à écrire comme le code civil. On dirait que le langage humain, produit complexe de la sensation et de la réflexion, oscille entre ces deux pôles, de l'onomatopée à l'algèbre.

By "MACNAMARA."

It needed not this confession of faith to reveal to us his passion for the word which paints and for the well poised sentence. There are certain passages from his hand which are in themselves the creed of his literary faith. I take from "In the Sunlight" ("Au Soleil") this description of the rising of the moon over a lake of salt :—"The full moon flooded the atmosphere with a luminous transparence which cast a glittering radiance on all that it glanced upon. The mountains already yellowing in the rising sun, the yellow sands and horizon seemed to grow more golden under the light which fell like a caress from that saffron orb. Below, at my feet, the Zar'z, that wide lake of solid salt, gleamed whitely. It was as though it gave forth a strange phosphorescence, brooding above it in a translucent mist, as of fairyland. There was something beyond Nature in it, so taking captive eye and mind, that I watched it for more than an hour, unable to bring myself to close my eyes. And around me on every side, standing out white under the moon-rays, the burnouses of the sleeping Arabs looked like gigantic snowflakes that had fallen there." I can imagine a present-day professor of rhetoric, such as Sainte-Beuve plays at being in some passages of his "Chateaubriand," presenting us

(Continued on page 262.)

LINDSEY HISTORICAL SERIES.

Latest additions to J. S. LINDSEY'S

PROBLEMS AND EXERCISES IN BRITISH HISTORY.

THE SECOND ANGLO-FRENCH STRUGGLE, 1688-1837 [Book D].

Large quarto, 112 pp., cloth, 4s. 6d.; interleaved with writing paper, 5s. Contents:—General Hints on Preparation in History for Examinations (Study, Revision, Answering Questions, Topical Exercises); **Short Lists of Select Books**; General and Special Scheme of Study of the period with various unique Chronological and Topical Synopses; **80 Fully-worked Answers to Typical Questions** with detailed references to accessible books.

This book covers several prescribed periods:—

Cambridge Local, 1912. Junior, 1688-1832; [most of] Senior, 1714-1863.

College of Preceptors, 1912. Second Class, 1688-1830; First Class, 1714-1832.

Oxford Local, 1912, 1913. Junior 1689-1837.

Central Welsh Board. [Most of] Senior, 1688-1868.

Similar Books previously published:—

TWELVE INVASIONS OF BRITAIN, TO 1216 [Book A].

THE FIRST ANGLO-FRENCH STRUGGLE, 1216-1509 [Book B].

Contents, style, and prices as in new BOOK D.

* Teachers and Students having a permanent interest in History should obtain these substantial helps in this durable form: but for the convenience of examination candidates and others whose interest may be temporary, the contents of each Book are also issued in two-shilling paper-covered Parts (dividing at 1066, 1399, 1783).

Further particulars on application to the Publishers.

JUST WHAT ALL TEACHERS HAVE BEEN WANTING!

A TREASURY OF POEMS

BEING

A Book of Verse for Boys and Girls.

Collected and Arranged by G. E. WILKINSON,

Lecturer in English Language and Literature at the City of Leeds Training College.

Crown 8vo, 176 pages, full cloth, net 1s. 3d. (postage 3d. extra).

Cloth back, paper boards, net 1s. (postage 3d. extra).

All the poems included are such as children can understand and appreciate. An attempt has been made to graduate the poems approximately in order of suitability to the increasing age of the children, the shorter and simpler ones being placed first. The book contains poems suitable for infants.

A short but excellent introduction gives valuable Hints to Teachers on the best way of dealing with poetry.
